Economic growth is continuing to pick up in both the EU and the United States. First quarter economic growth in the EU(12) of 1.3% was in excess of forecasts, while US GDP growth of 4.9% was a little below analysts' expectations. The price of oil remained high in April and rose further in May. Inflation in the EU(12) and the United States is continuing to rise. In the context of stronger economic growth and rising inflation, ECB interest rates are not expected to fall, while the likelihood of rates increasing in the United States is growing.

Although current growth rates of industrial production are subdued, the volume of production is higher than last year. The business tendency indicators are also quite favourable. At the end of April the private sector social partners adopted a wage policy agreement for 2004 and 2005 which is similar to the public sector agreement. Private sector wages are now linked to expected domestic inflation, expected inflation in the EU and expected movements in the SIT/EUR exchange rate, and no longer to past domestic inflation.

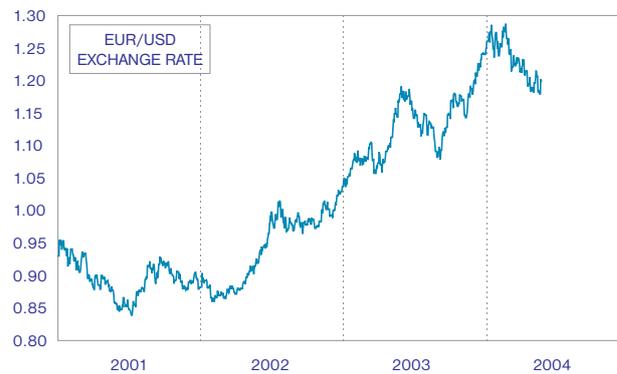

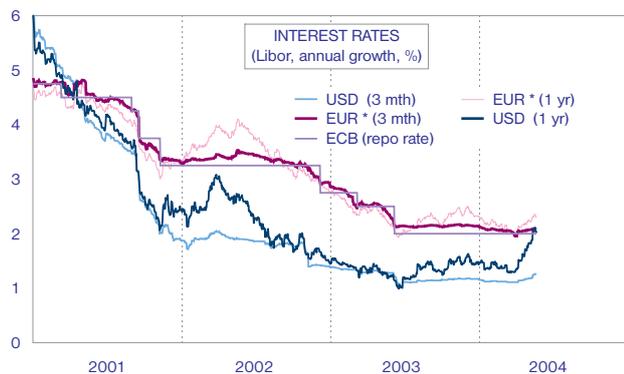

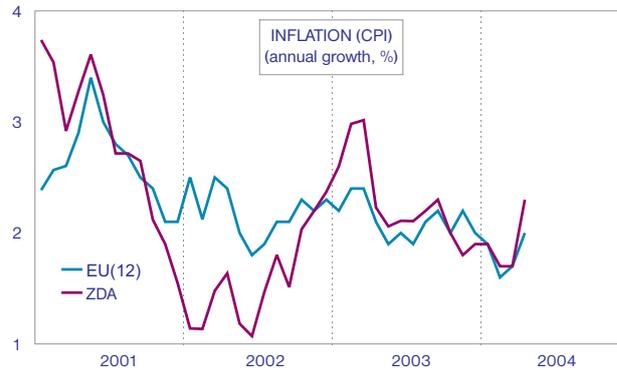

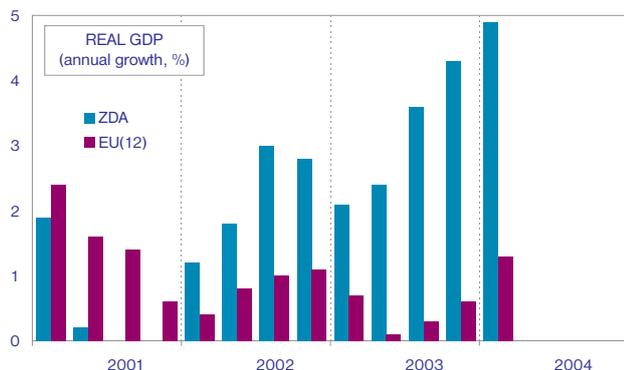

On May 13th the Government adopted a Convergence Programme which, among other things, sets out the medium-term goals of public finance policy and describes the measures needed to achieve those goals. The goal of public finance policy in the medium term is to achieve a stable budgetary position close to balance and, using fiscal policy measures, to contribute to the achievement of nominal and real convergence.

Year-on-year consumer price growth rose from 3.5% in April to 3.8% in May. Almost half of the strong price growth in May (0.9%) was due to higher prices of petroleum products. For the same reason we expect euro area inflation to rise to 2.5% in May. The gap between inflation in Slovenia and in the euro area is thus continuing to narrow. Excise duties on petroleum prices in Slovenia are at the lowest level envisaged in the EU, meaning that any further oil price rises on the world market will be reflected in domestic petroleum product prices. Higher oil and commodity prices have been causing industrial producer prices to rise for some time. In April they went up by 4.0% year-on-year.

A small current account surplus was maintained in the first quarter of this year. Export and import volumes are both rising, by 7.6% and 7.1% respectively year-on-year. The terms of trade also improved in the first quarter (by 1.4 percentage points). Financial outflows exceed the current account surplus and consequently foreign exchange reserves are declining slowly. Nevertheless, foreign exchange reserves are still quite high. They are sufficient to cover 6.7 months of imports of goods and services and exceed the short-term external debt by 57%.

Despite the increase in credit activity the growth of broad money remains modest as a result of outflows through foreign transactions. Lending to enterprises began to grow in the middle of last year, while household credit has begun to grow this year. The increased credit activity results from the rise in economic growth and domestic private consumption, the fall in domestic interest rates and the complete lifting of restrictions on foreign currency lending.

1. INTERNATIONAL ENVIRONMENT

Economic growth in the first quarter of this year continued to strengthen in both the EU (12) and the United States.

First quarter economic growth figures in the member states of the euro area exceeded forecasts. The main positive surprise was the level of growth in the three biggest economies: current growth of 0.4% in Germany and Italy and 0.8% in France. Consequently, the euro area as a whole recorded strong first quarter growth of 0.6% according to the Eurostat preliminary estimate (1.3% year-on-year). In the United States the economy continued to grow at the same rate as in the last quarter of last year. The current growth figure thus remained unchanged at 1.0%, while the year-on-year growth rate was 4.9%. However, first quarter economic growth has come in a little below analysts' forecasts of around 1.2%.

Inflation rose appreciably in April in both the EU (12) and the United States.

Year-on-year inflation in the euro area in April was 2.0%, a rise of 0.3 percentage points compared to February. The main factors contributing to price growth in April were transport prices (0.35 percentage points) and prices of alcoholic beverages and tobacco products (0.32 percentage points). The jump in inflation in April can also be explained by movements in energy prices. Despite the high oil prices, in the last three months energy prices have seen negative year-on-year growth (-2.0% in March and -2.2% in February) due to the high base effect from last year. April saw a reversal of this trend with year-on-year growth of energy prices reaching 2.0% (partly due to a lower base last year) and contributing to the jump in overall inflation. Year-on-year inflation in the United

States rose to 2.3% in April. The month-on-month rise in inflation was 0.2% in April, the fifth month in succession that inflation has risen by at least 0.2%, compared with an average monthly increase of 0.1% last year.

The ECB and the Fed left interest rates unchanged in April.

The likelihood of a rate cut in the euro area has fallen sharply following the announcement of better-than-forecast economic growth estimates for the euro area members and with inflation rising. In the United States meanwhile indications that interest rates will begin to rise have strengthened, mainly as a result of strong economic growth data, signs of recovery in the labour market and rising inflation.

The price of Brent crude oil remained high in April, and rose further in the first half of May.

The price of Brent crude

Sources: Reuters, Eurostat, Consensus, OECD, IFS.
Notes: Figures in parentheses indicate the month referred to except for economic growth, where they represent the forecast for the year as a whole

oil averaged USD 33.5 a barrel in April, virtually unchanged from the average price per barrel in March (USD 33.7). In the first half of May the oil price rose further to approach record levels (around USD 39 a barrel). The high prices are a result of increased demand and uncertainties on the supply side. According to the latest estimate from the International Energy Agency (IEA), average oil consumption this year will be up by 2 million barrels a day on the back of faster global economic

growth. Particularly notable is the strong growth in China, where demand for oil is expected to grow by around 13% this year (OPEC estimate), which represents almost half of the global increase in demand. At the same time, according to IEA estimates, the supply of oil in April fell by 440,000 barrels a day, mainly due to a reduction in oil production by OPEC members, although they did exceed their announced quotas by around 2 million barrels a day.

2. REAL SECTOR

Economic activity

The Statistical Office of the Republic of Slovenia has released final data on GDP developments in the period 1995-2000 and revised data for the period 2001-2002.

Compared to the earlier data for the period 1995-2002, the nominal level of GDP rose by an average of 1%, while real growth remained more or less unchanged. Revisions were made on both the production and expenditure side of GDP. Although data on first quarter developments are not yet complete, we believe that economic activity at the start of the year was relatively favourable. According to our estimates foreign trade made a more positive contribution than at the end of last year. Along with relatively strong domestic consumption, based primarily on investment in housing construction and household consumption, both of which are significantly import oriented, the start of the year was also characterised by strong exports. We estimate

that the economy grew in the first quarter at a rate similar to that at the end of last year, when it reached 2.5% year-on-year.

Despite the high level of industrial production compared to last year, current growth rates at the start of this year were somewhat less favourable.

The Statistical Office revised upwards its industrial production figures for January and February. The year-on-year growth in the volume of production in January was revised upwards by 0.8 percentage points compared to the preliminary estimate, while the February volume was increased by 1.1 percentage points. Current growth was stagnant despite the revision, with total industrial production in March virtually unchanged from the December level. In the first three months of this year the average year-on-year growth in industrial production was 4.0%, an increase on the average for last year (1.4%). While production levels of individual product groups fluctuated significantly, at the start of the year production of intermediate goods was growing fastest, although year-on-year the fastest growth was recorded in production of capital goods. Current growth in inventories was quite strong despite strong exports and an unchanged level of industrial production. The fastest growth, at both current and year-on-year levels, was in stocks of capital goods, while current growth in stocks of intermediate goods and consumption goods was zero.

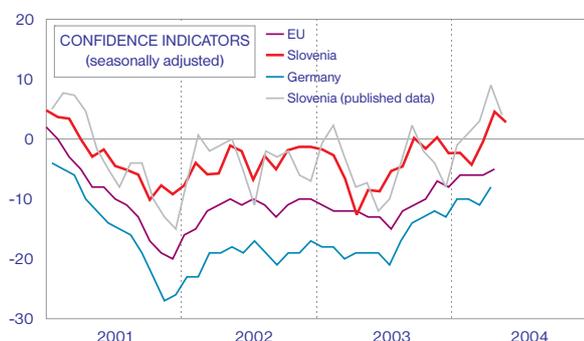

Indicators of activity in other areas point to a relatively high level of investment activity and household consumption. In January already, and particularly in February, growth in the value of construction was extremely strong, with housing construction rising appreciably faster than civil engineering.

Retail sales growth was relatively restrained at the start of the year, although the growth in sales of non-food goods, particularly furniture, household appliances and construction material, was somewhat higher than the average. The volume of sales of motor vehicles (growing at a little under 9% year-on-year in real terms in January and February) was also fairly high. Transport activity was strong in the first quarter of the year, with passenger volumes growing significantly more slowly than freight volumes. Volume indicators of tourism in the first quarter were just 1% up on the corresponding period last year. A reduction in the number of resident tourists was offset by an increase in the number of non-resident tourists. The number of German tourists in the first quarter was lower year-on-year, reflecting a significant fall in the number of overnight stays by visitors from Germany in March. Among the countries from which tourists traditionally come, only Italy recorded a rise in visitor numbers to Slovenia.

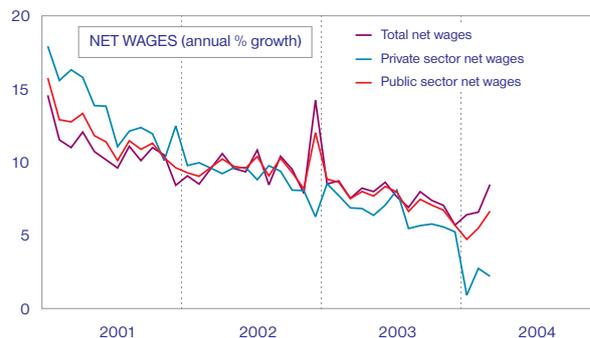

Indicators of economic climate in the second quarter are quite favourable. Enterprises are mostly satisfied with the current level of export orders, and expectations for exports in the next few months are optimistic. At the same time, expectations concerning domestic demand are relatively modest, which is somewhat surprising given the current relatively high level of consumption. The relative pessimism is probably associated with uncertainties over future developments in the labour market. Modest expectations with regard to future consumption are also evident in the very gradual improvement in the consumer confidence indicator.

The labour market

Total population receipts paid in March rose by 11.7% year-on-year (8.0% in real terms). Although a large part of the increase is attributable to a changed timing in the payment of bonuses compared to last year, wage growth was also quite high. The fastest growth among total population receipts in March was recorded by other labour compensation (15.1% in real terms), while the slowest growth was in labour compensation, which nevertheless grew at 4.7% in real terms. The main cause of the strong year-on-year growth in other labour compensation was the change in the timing of bonus payments, which last year were not paid until June in most cases. Year-on-year growth in average net wages increased again in March, and amounted to 3.1% in real terms. Wage growth in public administration remains low. In March it was just 0.9% in nominal terms year-on-year, while average wage growth over the first three months of the year was negative. Wages in manufacturing continue to grow strongly – year-on-year growth in March was 9.9%, or 6.2% in real terms, which is the same level as productivity growth. Consequently, the gap between wage growth in the private sector (8.5%) and in public sector services (2.2%) widened further in March. We will need to wait at least for April's wage figures before getting a clearer picture of wage developments because last year's base was quite high.

At the end of April the private sector social partners adopted a wage policy agreement for the period 2004-2005. The agreement abolished indexation based on past inflation. The new formula for increasing wages is similar to that used in the public sector (taking account of the expected rate of price growth in Slovenia and the EU and expected movements in the SIT/EUR exchange rate). The wages of all employees paid under a collective contract will be adjusted at least by a predetermined amount, and not by a rate of increase as was the case previously. The agreement, which will need to be supplemented to include negotiations at branch level collective contracts, sets the minimum wage increase under collective contracts, while the maximum increase was set in the social agreement adopted last year, under which real wage growth must be at least one percentage point lower than productivity growth.

The employment trend is steadying after last year's weak-

ness. Although expectations are fairly uncertain, we can expect a further improvement in the employment situation given the upturn in the economy. The rate of labour force contraction remains slower than in the middle and at the end of last year. This resulted significantly more from the fall in the number of persons in employment coming to a halt than from the slower decline in the number of people unemployed. While

there was a decline in the number of people employed in labour-intensive branches (mainly the textile and leather industries), and also in certain branches with higher added value (e.g. the manufacture of electrical equipment), the start of the year was characterised by rapid employment growth in the public sector (1.8% year-on-year in the first quarter) and in the financial sector (2.6%). The number of people out of work at the end of April was the lowest since December 1991, while the rate of registered unemployment in March was 0.2 percentage points less than in the same month last year.

3. PUBLIC SECTOR

On 13 May the Government adopted a Convergence Programme. The Programme sets out, among other things, the medium-term goals of public finance policy and the measures to achieve those goals. It also contains a sensitivity analysis of the public finance goals to changes in the basic assumptions, comparisons with earlier forecasts and an assessment of the long-term sustainability of the public finances. The goal of public finance policy in the medium term is to achieve a stable budgetary position close to balance and, using fiscal policy measures, to contribute to the achievement of nominal and real convergence.

Slovenia intends to maintain a general government deficit below 3% of GDP. In the Convergence Programme the Government set out the goal of ensuring that the general government deficit (in accordance with ESA-95 methodology) does not exceed 1.93% of GDP in 2004 (as a comparison, a deficit of 1.6% of GDP was forecast in the March 2004 Reporting of Government Deficits and Debt Levels, in a report which is used in the calculation of the Maastricht criteria relating to the budget deficit and government debt and which, from this year, Slovenia will have to provide to the European Commission twice a year) and 1.78% of GDP the following year. A further reduction in the deficit is forecast over the coming years, to below 1% of GDP in 2007. The Government aims to achieve this goal while keeping the overall fiscal burden unchanged and with a gradual restructuring of public revenues and expenditures. The overall level of spending will be adjusted in line with the target deficit.

Data on current trends in the early part of the year are favourable. In the first two months of 2004 the general government deficit was SIT 12 billion, slightly less than in the corresponding period last year. On the basis of this and other preliminary data and estimates we can conclude that the public finance position in the first quarter was more favourable than last year, with the major contribution coming from strong real growth in revenues.

It is unlikely that the strong growth in revenues and the restriction of certain expenditures will be maintained until the end of the year. Good first quarter results were helped also by one-off revenues resulting from the liquidation of the Slovenian Development Corporation. The small growth in expenditures reflects substantially lower spending on goods and services and investment expenditure in the first few months of this year compared with the same period last year, which,

Guarantees	429	7.5				

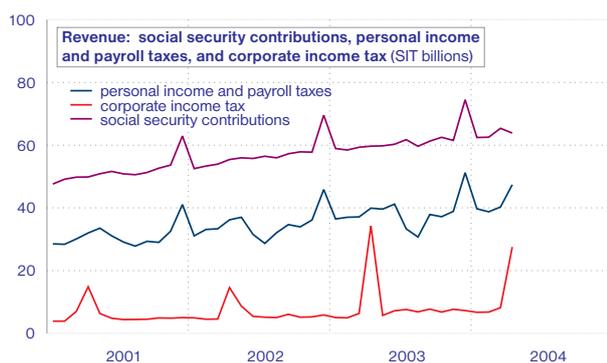

Source: Ministry of finance.

according to preliminary data, was again low in March. These trends are not expected to continue until the end of the year.

In mid-May SIT 20.5 billion of bonds were issued. Half of the total was from the second issue of RS55 three-year bonds, and the other half from the third issue of RS57 ten-year bonds. The average annual yield on all the bids accepted for the three-year bonds was 4.46% (compared with 5.13% at first issue in February), and for the ten-year bonds 4.79% (compared with 5.03% at first issue in March). At the start of May obligations from RS13 bonds totalling SIT 13 billion were repaid early. This year to mid-May a net total of approximately SIT 85 billion of Republic of Slovenia bonds was issued.

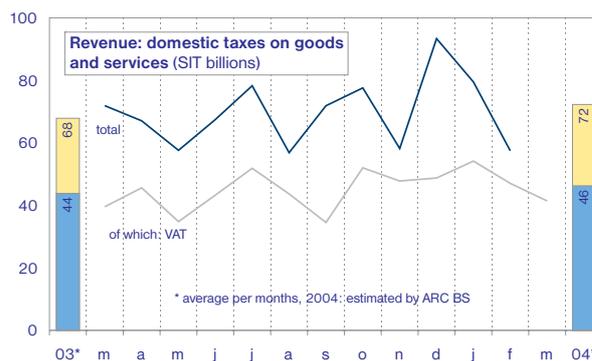

Revenues

General government revenues grew by over 3% in real terms in the first two months of the year, and by even more in March and April according to preliminary data. Although revenue growth was low in January, it picked up in February and, according to preliminary data, also in March. The strong growth in March was helped by one-off revenues of over SIT 12 billion from the liquidation of the Slovenian Development Corporation (0.2% of GDP). Year-on-year growth in revenues weakened in April according to preliminary data and estimates. Corporate income tax revenues in particular were less than in April last year.

Corporate income tax payments in April were down one-fifth on the same month last year, and overall in the first four months of this year tax revenues from this source were lower than last year in the same period. A large proportion of corporate income tax is paid in April (one-third of the total amount last year). A total of SIT 27 billion in corporate income tax was paid into the budget in April this year, one-fifth less than in April last year. The figures show corporate income tax revenues in the first four months of this year slightly down on the corresponding period last year. Nevertheless, we expect full-year revenues to exceed last year's total.

Labour tax revenues grew by almost 4% in real terms in the first quarter. Growth was strong in March in particular and preliminary data show it continuing in April. In the first four months of the year revenue from payroll taxes grew most, by over 6% in real terms. Their growth over the year as a whole is expected to be lower because in the private sector wage policy agreement for the period 2004-2005 the Government committed itself to proposing in the first half of the year amendments to the law regulating payroll taxes, raising the taxation threshold to SIT 165,000 gross (it is currently at SIT 130,000 gross).

Consumption based tax revenues grew by a tenth in real terms in the first four months of this year according to preliminary data. Revenues from excise duties are rising faster than VAT revenues. Revenues from tobacco excise duties are up by around a fifth, while revenues from excise duties on mineral fuels are also higher than in the first four months of last year. Despite a reduction in these excise duties in May, intended to cushion the inflationary impact of the rapid growth in oil prices on the world market, the level of excise duties this year to the middle of May was still higher than last year on average.

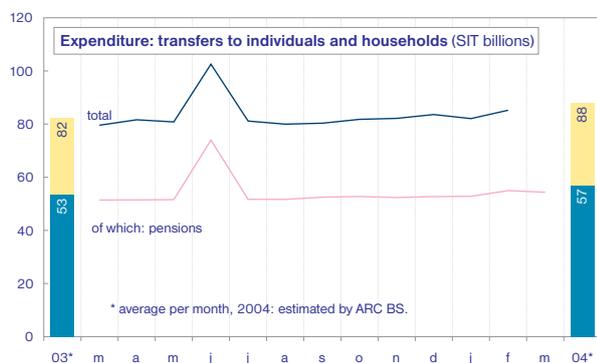

Expenditures

Growth in general government expenditures in the first part of this year was low; 0.6% in real terms in January and February. The biggest nominal growth was in spending on subsidies and certain groups of transfers to individuals and households (social security allowances, wage compensation and sickness benefits). Expenditure on goods and services and investment expenditure was low in January and February, and certain data indicate that this trend continued in March. We

estimate that expenditure growth in the first quarter was less than the growth in general government revenue. Actual figures for the state budget indicate that budget expenditure in the first quarter (excluding municipalities and funds) was within the set quota, and was actually 5% below it.

Year-on-year personnel expenditure in January and February was down by over one percentage point in real terms. Wage figures show that during this period wages in the public administration, defence and social security sector fell in nominal terms by 2.6%, while in health and social care they rose by 1.0% and in education by 4.2%. During the same period employment in all of these sectors rose by around 2%. Public sector wages will be adjusted in July in accordance with the agreement relating to the adjustment of basic wages and bonuses in 2004 and 2005.

Expenditure on goods and services was low in the first two months of the year. In January and February it was 16% lower year-on-year, and down by approximately the same percentage on last year's average figure. Figures for the state budget and the social security funds indicate a low level of expenditure in March too. Spending on office supplies and other material and services and on current maintenance were among the items to fall.

Transfers to households were growing strongly in real terms at the start of the year. Year-on-year growth was high in January, and increased further in February. The pensions increase and above-average expenditure on sickness benefits contributed to the growth in February. We expect the full-year real growth in transfers to households to be lower than the rate recorded in the early part of the year.

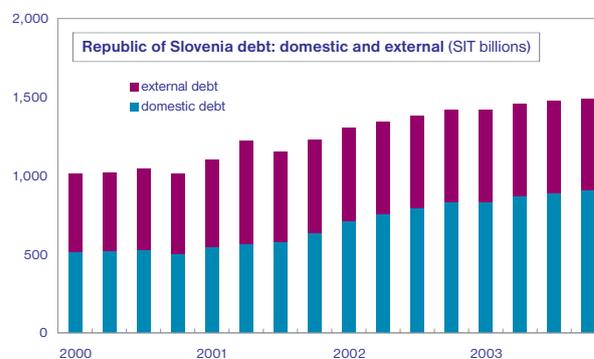

Transfers for social security in particular are growing fast. These have been rising for some time, largely as a result of an increase in the number of people entitled to social security benefits. In the first quarter the number of people receiving these benefits rose year-on-year by over 20% (to 59,788 in

March). The biggest group comprises unemployed people with no source of income.

Investment spending in the first quarter was modest but should pick up in the rest of the year. Investment expenditure and investment transfers were very low in January and February, and also in March according to certain preliminary data. This year's budget envisages an increase in these expenditures. Investment spending and investment transfers totalled around 4% of GDP last year and are expected to be even higher this year.

Measures to restrict health expenditures are expected to improve the operations of the Health Insurance Institute of Slovenia (ZZZS). A number of measures have already been adopted this year aimed at restricting expenditure in the health sector. Nevertheless, the ZZZS will record a deficit again this year. The Convergence Programme envisages the ZZZS debt being transferred to the state budget. At the end of 2003 this debt totalled SIT 19 billion, while the budget documents envisage a deficit of SIT 14 billion this year.

The collective supplementary pension insurance premiums for public employees have been paid. By the agreed deadline the Government paid voluntary supplementary pension insurance premiums for the past eight months for nearly 157,000 public employees. From now on the payments, of around SIT 1 billion, will be made on a monthly basis.

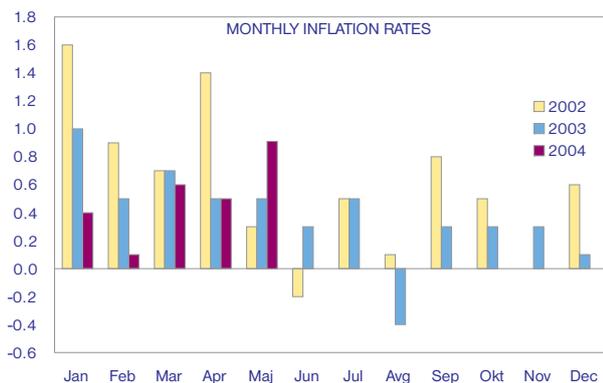

Public debt

Public debt was 26.0% of GDP at the end of last year. In one year the public debt grew by 5% to SIT 1,490 billion. Of this, 60% was domestic debt. The debt was mostly long-term.

State guarantees totalled 7.5% of GDP at the end of last year. In one year the volume of state guarantees grew by over a fifth to stand at SIT 428.5 billion at the end of the year. Around half of the state guarantees relate to the liabilities of DARS.

4. PRICES

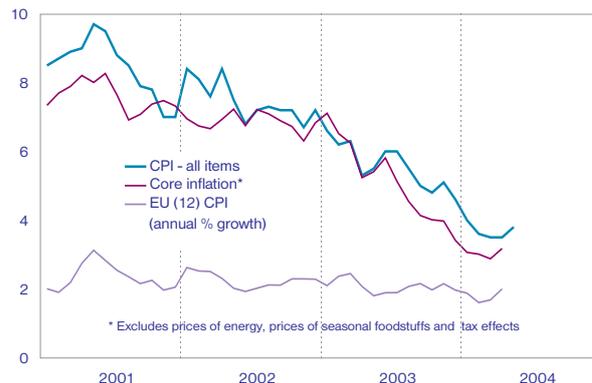

Prices rose by 0.9% in May, while year-on-year price growth was 3.8%. The prices of goods and services rose on average by 0.9% and 0.7% respectively. Among services the fastest price growth was again in package holidays, while semi-durables recorded the fastest price growth among goods (1.5%).

May inflation was influenced by higher prices of petroleum products, footwear and package holidays. Higher oil prices on world markets pushed up petroleum product prices in Slovenia. The Government was unable to prevent these price rises because excise duties are already at the minimum permitted levels. Petrol prices rose by 4.5% on average, while the prices of all petroleum products together added around 0.4 percentage points to inflation. The continuing seasonal impact of new footwear added to the growth of footwear prices, which rose on average by 5.7%. Package holidays, rail transport and cars were among the other items to record strong price rises, while price growth was restrained by falls in the prices of mobile telephony services, beverages and medicines.

Sources: Statistical Office of the Republic of Slovenia. Breakdown of CPI by Bank of Slovenia and Institute of Macroeconomic Analysis and Development, other calculations by Bank of Slovenia. Figures may not sum to official figures due to rounding.

The growth of free prices is continuing to decline gradually, while administered price growth is becoming increasingly uncertain. Free prices rose by 0.4% in April, while year-on-year growth of free prices fell from 3.5% to 3.4%. Free prices continue to display a clear falling trend, but in the future they will be strongly influenced by factors stemming from the international environment, in particular the growth in oil prices on world markets and the growth in prices of other commodities,

which may be transmitted to free prices via growth in domestic producer prices. Unlike free prices, administered prices rose by 1.1% in April alone, while year-on-year growth in administered prices climbed to 4.7%. Administered price growth has thus already exceeded last year's inflation figure, and results largely from rises in the prices of municipal waste removal services, television licence fees and petroleum products. Prices of waste removal services were increased by 8.2% in April, while the television licence fees went up by 3.5%. Further convergence with the Maastricht price growth criterion will thus depend to a large degree on future implementation of the Government's administered price adjustment plan.

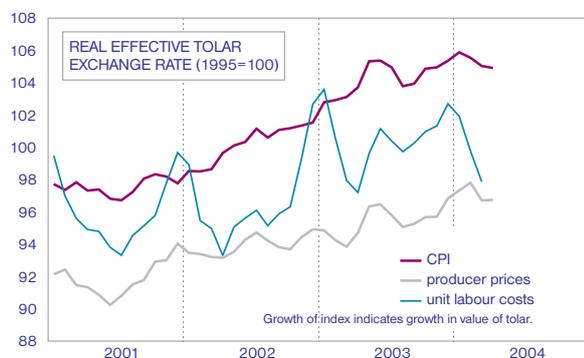

After falling for several months, core inflation rose slightly in April. Year-on-year growth in core inflation was 3.2%, a rise of 0.3 percentage points compared to March. We believe the rise in core inflation in April was only temporary, due largely to last year's relatively fast fall in core inflation in the early part of the year. Consequently, we anticipate that a gradual, and probably slower, decline in core inflation will continue in the coming months.

While consumer prices remain stagnant, industrial producer prices continue to grow. In April they rose by 4.0% year-on-year. Although in March the indications were still that the rise would only be of a seasonal nature, April saw price rises in certain products (e.g. metal products, the biggest impact on which comes from the rapid rise in commodity prices on international markets) which could be passed on to consumer prices. Among industrial products the fastest growth (0.7%) was in intermediate goods prices. Prices of consumption goods and capital goods rose by 0.4%.

5. BALANCE OF PAYMENTS

Competitiveness

The nominal effective exchange rate of the tolar against a basket of foreign currencies fell during the first four months of this year. The value of the tolar fell by 0.7% in March, and then by a further 0.5% in April. The fall in the nominal effective exchange rate of the tolar this year was caused mostly by the depreciation of the tolar against the dollar (2.7%) and also by the depreciation of the tolar against the euro (0.7%). The tolar has depreciated this year by a total of 1.1%, and in the year to April by 0.6%. Given the continuing reduction in the signalled rate of depreciation of the tolar against the euro, which following the latest change in May is 1.5% at an annual level, movements in the nominal effective exchange rate in the coming months will be influenced mainly by changes in the value of the US dollar on world financial markets.

Measured in terms of the real effective exchange rate, the competitiveness of the Slovenian economy improved slightly in the first four months of this year. This is particularly the case for competitiveness measured in terms of consumer prices (0.4%), and only to a small extent for competitiveness measured in terms of producer prices (0.1%). Long-term indicators of competitiveness also showed some improvement in April. The appreciation of the real effective exchange rate, measured in terms of consumer prices, declined from 1.9% in March to 1.2% in April year-on-year, and in terms of producer prices from 3.0% to 2.2%.

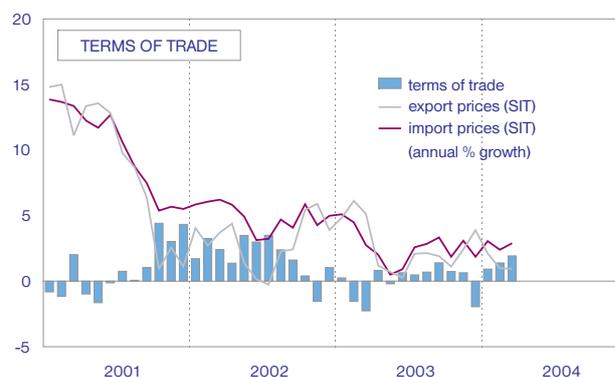

In the early part of this year producer prices were rising faster than consumer prices. From December 2003 to

	Annual % growth		Mthly % growth		
	Dec.01	Dec.02	Dec.03	Mar.04	Apr.04
Nom. eff. SIT ex. rate (1)	-4.3	-1.4	0.8	-0.7	-0.5
Real effective SIT exchange rate (2):					
- CPI	0.8	3.8	3.8	-0.5	-0.1
- Producer prices	3.7	0.9	2.0	-1.1	0.0
- Unit labour costs	0.6	3.0	0.0	-1.9	...
Real SIT exchange rate:					
EUR (CPI)	-0.4	0.6	-0.3	-0.2	-0.1
USD (CPI)	-0.2	14.6	20.3	-3.0	-2.1

1) Effective exchange rate: basket of 7 currencies of Slovenia's main foreign trading partners (excluding Croatia), weighted by the shares in Slovenian goods trade. From January 2002 onward three currencies (EUR, USD, CHF) are used in the calculation. 2) Real exchange rate: SIT exchange rate divided by relative (domestic/foreign) price ratio

March 2004 producer prices rose by 1.7%, while consumer prices rose by 1.1%. This year Slovenia is not alone in experiencing this differential in price growth rates. Similar dynamics are evident in the weighted price index for the seven countries included in the basket used to calculate the real effective exchange rate. The weighted index of producer prices rose by 1.3% and of consumer prices by 0.9%.

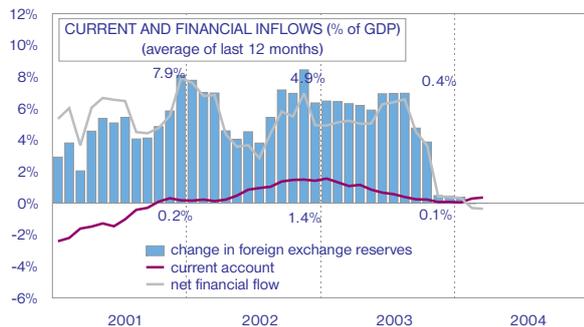

The growth in prices of commodities and energy products on world markets is causing producer prices to grow faster than consumer prices. The rising trend in commodity prices began in the second half of last year, coinciding with the start of an accelerated depreciation of the US dollar against the euro, which was strongest in the period between May last year (1.06 dollars to the euro) and February this year (1.26 dollars to the euro). The dollar then strengthened against the euro, reaching an average value of 1.19 dollars to the euro in mid-May.

Dollar prices of commodities and energy products have risen faster in the last year than the rise in the value of the euro against the dollar. In the year to April the euro gained 11% against the dollar. In the same period the index of dollar prices of all commodities climbed 24%, of metal prices by 43% and of industrial commodities by 33%. At the same time the price of a barrel of North Sea Brent oil rose by 35% to reach an average price per barrel in April of USD 33.5. The rising trend in oil prices continued towards 40 dollars per barrel in the middle of May. Movements in commodity and energy product prices were influenced not only by the fall in the value of the US dollar against other world currencies but also, in particular, by strong economic growth and demand in China and other fast-growing economies of South-East Asia and the United States.

The continuation of these trends in the second half of this year would have negative consequences for the world economy. The balance of payments position of commodity and energy product importers would deteriorate. Pressure on prices would increase. The overall effect would be a decline in competitiveness and a reduction in economic activity and growth. In the face of such trends we would expect a deterioration in the terms of trade in goods and additional pressure on domestic price growth in Slovenia too.

Current account

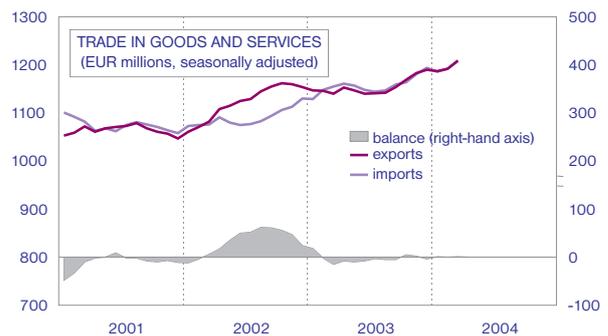

Despite a deficit in March, the current account surplus was maintained in the first quarter. The current account deficit in March was EUR 65 million, some EUR 17 million less than in the same month of last year. After a current account surplus in January and February this year of EUR 109 million, the March deficit reduced the cumulative total for the first three months of the year by more than half to EUR 44 million. The improvement in the current account this year is primarily attributable to the favourable result in trade in goods and a reduction in net outflows of investment income.

Exports of goods and services grew slower than imports in March. Exports of goods and services grew by 14.7% year-on-year to EUR 1,342 million, while imports grew by 15.1% to EUR 1,371 million. In the first three months of this year exports of goods and services grew by 7.9% and imports by 6.4%. As a result, a EUR 35 million surplus was recorded in trade in goods and services, compared with a deficit of EUR 11 million in the same period last year. The improvement in trade in goods and services since the last quarter of last year has been due to the rapid growth in goods exports. In the first three months of this year exports of goods grew by 8% year-on-year and imports by 6%. Expenditure on services has been growing faster than income from services since the second half of last year.

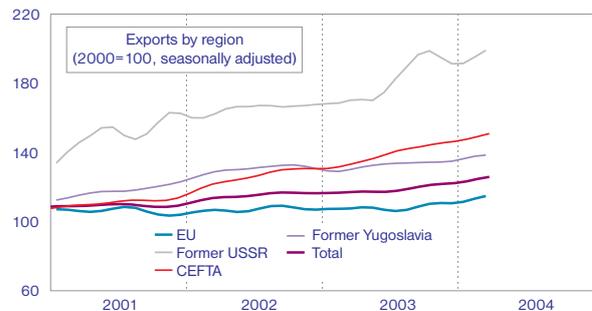

This trend continued at the start of this year. In the first three months of this year income from services grew by 7%, while service expenditures rose by 11%.

Sources: Goods trade: Statistical Office of the Republic of Slovenia. Goods trade volumes: BoS estimates, Statistical Office of the Republic of Slovenia, IFS, IMF

Year-on-year growth in exports of goods exceeded import growth by over two percentage points in the first three months of this year. The result of these trends was that coverage of goods imports by goods exports increased year-on-year by two percentage points to 93.5% in the first three months of this year, while the deficit in trade in goods fell by EUR 44 million to EUR 206 million.

Favourable goods trade results this year partly reflect the lower value of oil imports. In the first three months of last year we increased oil imports by more than average (to EUR 194 million) on expectations of war in Iraq. This year the value of oil imports was down EUR 54 million, more than a quarter lower, at EUR 140 million, partly as a result of the rise in the

Source: Bank of Slovenia

euro against the dollar. If the value of oil imports this year had remained at the same level as in the corresponding period last year the deficit in trade in goods in the first quarter of this year would have risen to EUR 260 million.

Since March oil and commodity prices on world markets have been rising rapidly, while the EUR/USD exchange rate has remained steady at around USD 1.2 to the euro. In mid-May the oil price hit USD 40 per barrel. If this price is maintained until the end of this year, and assuming that domestic demand for oil remains unchanged, it would have a substantial and direct negative impact on the balance of trade. We estimate that this negative impact would amount to around EUR 150 million. At the same time commodity prices on world markets have risen by around 20% (expressed in EUR). If commodity prices also remain at the current level until the end of the year the value of imports (assuming the same volumes as last year) would rise by over EUR 225 million. Together these price changes alone would add over EUR 375 million to the value of imports.

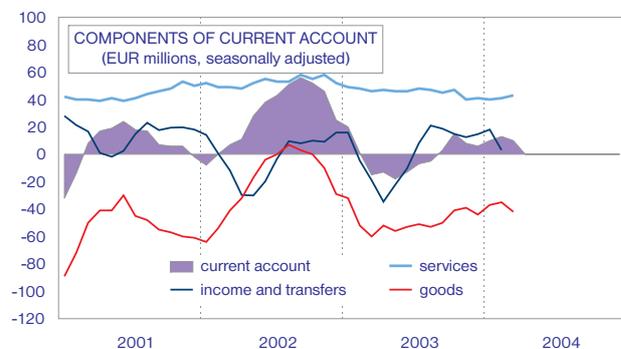

Demand for Slovenian goods exports is continuing to strengthen. In March goods exports totalled EUR 1,135 million, 17% higher than in February and up over 15% year-on-year. Demand from the EU (15) increased at the average level. Among Slovenia's main foreign trade partners demand for Slovenian exports from Austria increased by 40% and from Germany by 17% in March. Growth in demand from Italy was just 2%, while demand for Slovenian exports from France fell by over 5%. Demand from the CEFTA countries remains high, in March particularly from the Czech Republic, Slovakia and Poland. Growth in demand from the countries of the former Yugoslavia (10%) was below average, with the exception of Serbia and Montenegro (19%). The growth in exports to the countries of the former Soviet Union of 18% was above average and is still rising. Within this group, exports to Russia grew by 21%.

In March exports rose by 14% in real terms. The biggest rise was in exports of capital goods (18%). Exports of intermediate goods rose at the average level, while exports of consumption goods grew by 13%.

The increase in exports was matched by an increase in imports. In March goods imports totalled EUR 1,252 million, 21% higher than in February and up 14% year-on-year. The increase in the volume of goods imports of 16% was higher than the nominal growth. In total the volume of goods imports grew by 7% year-on-year in the first three months of 2004. Minor changes occurred in the composition of imported goods by purpose. The biggest year-on-year growth in the first quarter of this year was in imports of consumption goods and imports of capital goods, which rose by just under 12%. Growth in imports of intermediate goods was weaker at 4%.

In the first three months of this year imports of services grew faster than exports. Exports of services grew by 7% year-on-year, while imports rose by 11%. With imports of services growing faster than exports, the year-on-year surplus in trade in services fell by EUR 3 million to EUR 137 million.

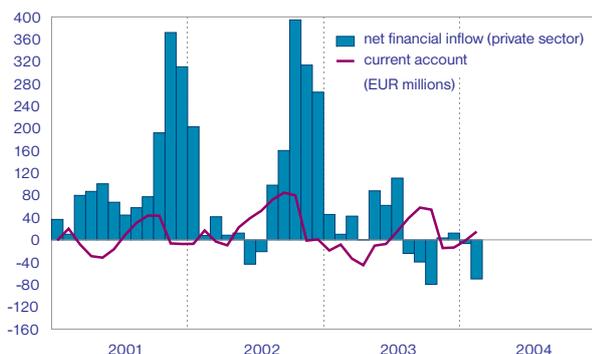

On the export side income from exports of communication and construction services grew by more than average (over 60%). Along with the growth in goods exports, income from transport services also rose fast (by 14%), while growth in income from travel services was less than half as much. The main reason for the slower growth in exports of services this year was an EUR 11 million drop in income from other business services. On the import side the biggest growth was in expenditure on other business services (16%) and expenditure on patents, licences and copyrights (15%). Expenditure on transport, travel and communication services grew by around 13%. Services related to construction works in Slovenia fell by 30%.

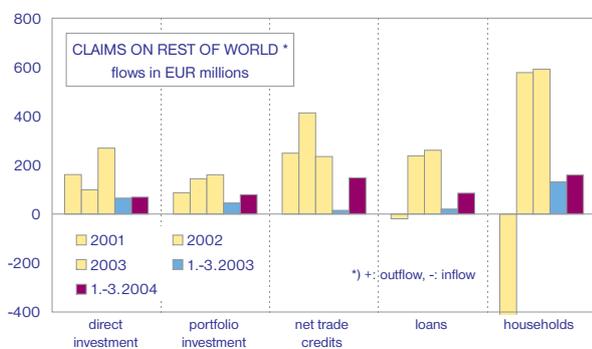

Net compensation and transfers improved by EUR 25 million year-on-year in the first quarter of this year. While net compensation of employees and transfers remained stagnant the main contribution to the favourable result this year came from a EUR 28 million fall in net outflows of investment income.

Financial account

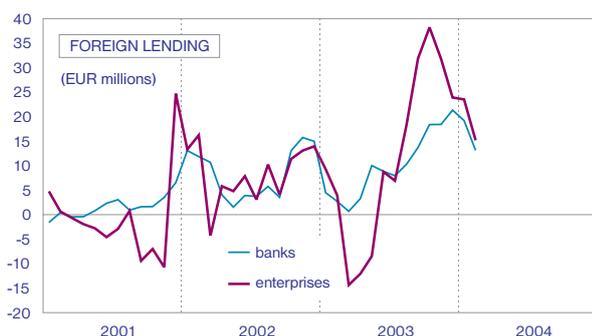

March marked the end of the third consecutive quarter of net outflows in financial transactions with the rest of the world. In March net financial outflows were EUR 44 million, bringing the total for the first quarter to EUR 175 million, or 3% of GDP. Claims of the private sector increased by EUR 545 million and liabilities by EUR 402 million.

Stable growth in investments by residents in foreign securities continued, reaching a total of EUR 79 million in the first quarter. Although at EUR 24 million they were slightly lower in March than in February, growth over the whole of the first quarter was high, 30% compared to the last quarter of 2003 and 76% year-on-year. Investments abroad in March were almost exclusively by the non-bank sector (EUR 20 million in shares and the rest in bonds).

Lending abroad in March was somewhat weaker than in previous months, to both enterprises and banks. Nevertheless, the net outflow of loans abroad in March of EUR 24 million was higher than in the whole of the first quarter of last year. Net lending abroad by banks and enterprises this year to March totalled EUR 85 million.

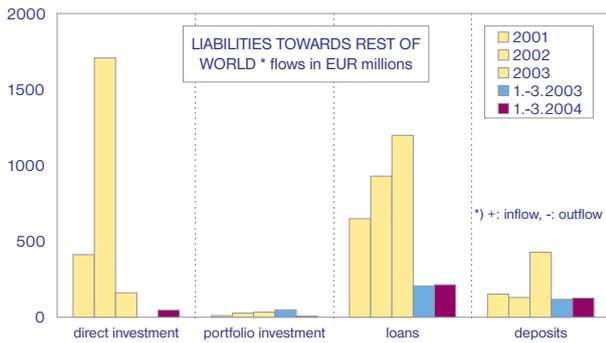

In the first three months of the year net trade credits issued to foreign partners reached EUR 148 million, compared with EUR 15 million in the same period last year. According to figures from company reports, which unlike balance of payments data show credit flows broken down into issued and received credits, the balance of trade credits issued in the first quarter increased by EUR 339 million while trade credits received increased by EUR 122 million, making a net increase of EUR 217 million. The biggest contribution to the net growth was EUR 94 million with the European Union (15), with which Slovenia's claims increased by EUR 200 million and liabilities by EUR 106 million. In line with the deficit in goods trade, in trade credits the EU (15) is a net creditor: at the end of March credits received by Slovenia enterprises from the EU (15) exceeded credits issued by EUR 220 million. Despite the high level of trade credit activity, in the past two years the balance of claims and liabilities with the EU (15) at the end of the year was more or less unchanged as the cumulative growth in trade credits in December was cancelled out either by repayments or write-offs.

At the end of March the share of the EU (15) in trade credits issued was 44%, while its share of Slovenian exports was 61%. The share of the EU (15) in trade credits received was 74%, while its share of imports was 67%. The situation was reversed with the countries of the former Yugoslavia, where the greater financing of exports by means of trade credits is illustrated by a 29% share of credits with a 15% share of exports.

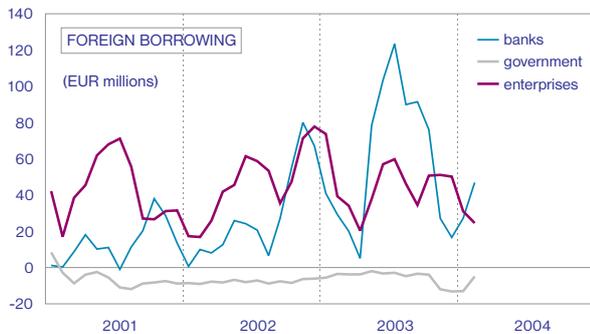

Inflows of foreign loans to banks and, after a long period of absence, inflows from the sale of government eurobonds were prominent on the liabilities side in March. To a lesser extent (EUR 17 million) the eurobonds were a direct inflow to the government sector, while a larger proportion of

 Sourcer: Bank of Slovenia. 1) "Private sector" = non-government sector, thus including public sector organisations.

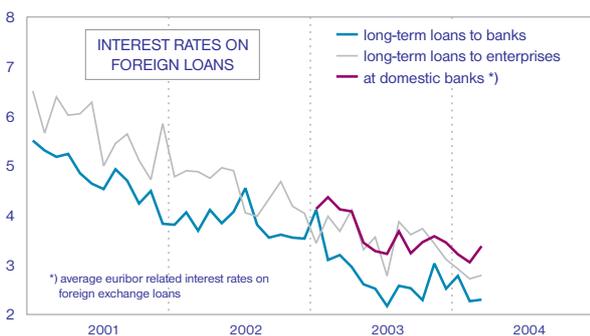

the inflow (EUR 35 million) was from the sale of eurobonds abroad by banks (which indirectly represents an increase in government liabilities to the rest of the world). Foreign direct investment amounted to EUR 20 million, bringing the total over three months to EUR 46 million. There were no foreign portfolio investments in February, leaving the total in the first quarter at just EUR 7 million.

In March enterprises made net repayments of loans abroad, while banks increased their borrowing abroad.

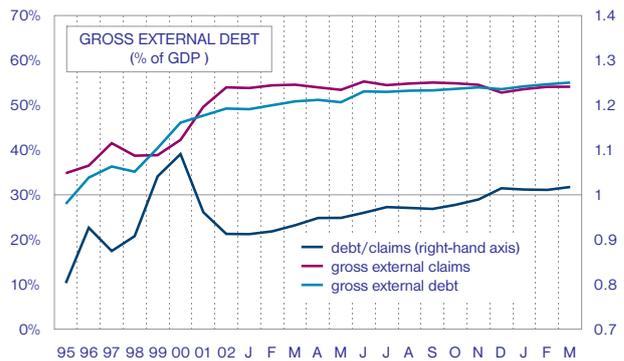

In March enterprises raised EUR 10 million less in new loans than they repaid. Over the whole of the first quarter they raised a net total of EUR 74 million, a third less than in the same period last year. By contrast, banks stepped up their borrowing from abroad in March (and in April too according to preliminary data). Net inflow of lending to banks in March was EUR 80 million, making a total of EUR 141 million in the first quarter. Data on interest rates on long-term foreign currency loans to enterprises since January 2003 show that actual interest rates at domestic banks in recent months have been only marginally higher than those obtained by enterprises abroad (0.6% in

March and 0.3% three months earlier), and in some months have even been lower (the data do not include the costs of the loans and also do not cover all domestic banks). The figure below illustrates the clear interest banks have in providing foreign loans to domestic enterprises: in the observation period the difference between the average interest rate obtained by Slovenian banks abroad and the rate at which they provided foreign currency loans (tied to the euribor) to enterprises was around one percentage point.

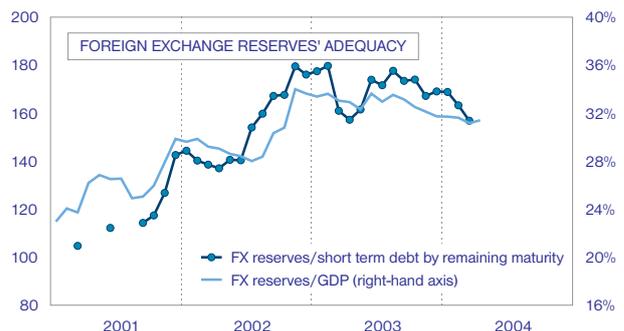

At the end of March 2004 the gross external debt stood at EUR 13,491 million, having risen by EUR 496 million since the end of last year.

Strong foreign borrowing by banks means their share of external debt is continuing to rise: from 21.5% at the end of 2002 to 26.8% at the end of last year and 27.6% at the end of March 2004. More restrained borrowing abroad by enterprises is reflected in slower debt growth in the enterprise sector: after falling by 2.7 percentage points in 2003 it has risen by 1.4 percentage points this year to reach 47.1%. At the same time the debt to affiliated enterprises abroad fell by EUR 149 million.

At the same time as current and financial account deficits were recorded, foreign exchange reserves in March fell by EUR 109 million. By the end of March the stock of foreign exchange reserves had fallen to EUR 7,640 million.

Although they have decreased, foreign exchange reserves are still sufficient to cover 6.7 months of imports of goods and services, the same as in February and unchanged from 2003. The indicator measuring sufficiency of foreign exchange reserves fell to 157%, 12 percentage points below the level at the end of 2003. This fall is due only in small part to the lower

level of reserves (which were down just 0.2 percentage points as a proportion of GDP). The main cause of the deterioration was the growth in short-term external debt of EUR 316 million to EUR 4,871 million.

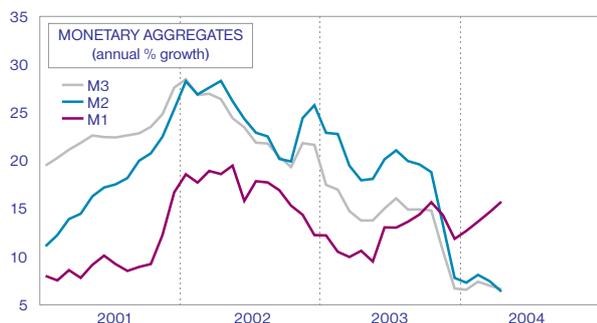

At end of period, EUR millions	2001	2002	2003	2004 Apr.

6. MONEY AND CREDIT

The broad monetary aggregate M3 has been rising gradually since the start of April after falling in February and March. M3 fell by SIT 0.7 billion in March but rose by SIT 35.2 billion in April. This rise partly reflects rapid M3 growth at the end of April, and indeed it fell by around SIT 20 billion in the first few days of May. Year-on-year M3 growth has been around 6% this year, compared with around 14% in the same period last year.

The increasing trend in foreign currency deposits and the declining trend in tolar time deposits, which began in the middle of last year, have continued. In January to April this year foreign currency deposits increased by SIT 59.3 billion, while tolar time deposits and bank securities issues decreased by SIT 29.1 billion. The growth in foreign currency deposits at the expense of tolar time deposits was largely due to the reduction in tolar interest rates and uncertainty over the setting of the central parity on entry into the ERM II exchange rate mechanism.

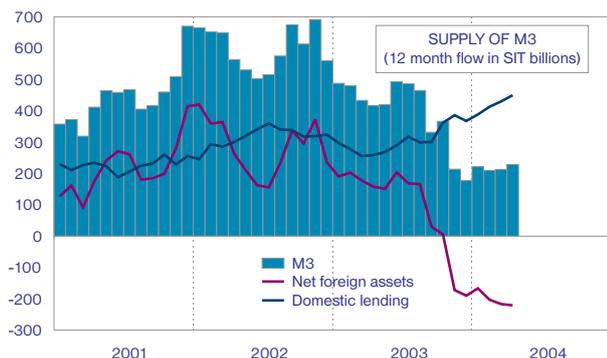

Amongst tolar time deposits, again only deposits with agreed maturity of up to three months are increasing, while long-term time deposits are falling. Deposits with agreed maturity of up to three months were the only component of time deposits to rise in the first four months of this year. Deposits with agreed maturity of up to 31 days grew by SIT 16.0 billion over this period, while deposits with agreed maturity of one to three months grew by SIT 79.1 billion (of which, SIT 65.8 billion in January). In this period deposits with agreed maturity of over 90 days fell by SIT 98.0 billion.

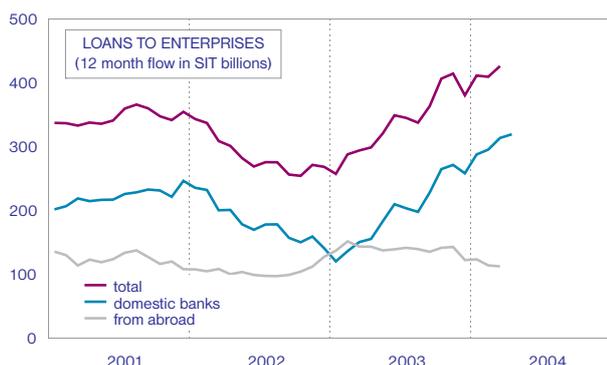

Year-on-year M1 growth has been rising since the middle of last year in line with more buoyant domestic consumption. In April M1 grew by 2.7%, or 14.8% year-on-year, which is approximately twice as much as the growth in the broad monetary aggregates. The share of M1 in M3 is thus rising gradually and at the end of April stood at 21.4%. Indicators (retail trade, imports of consumption goods, lending to households) reveal buoyant household consumption as the main reason for somewhat stronger M1 growth.

Source: Bank of Slovenia

Despite strong credit activity the growth of broad money remains modest as a result of outflows through foreign transactions. The average monthly fall in net foreign assets in the last quarter of last year was SIT 34.7 billion, compared with SIT 29.6 billion from February to April this year. Credit activity is strong, amounting to SIT 40.5 billion a month in the last quarter of last year and SIT 48.8 billion a month from February to April this year.

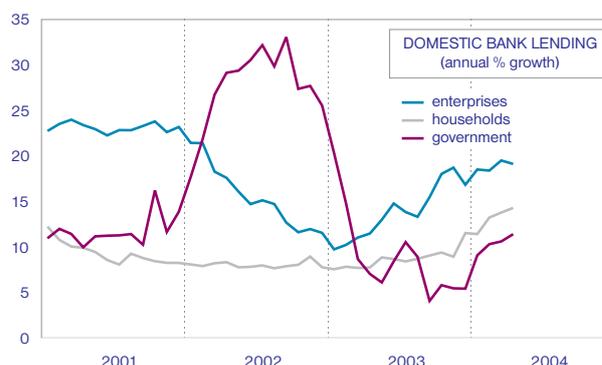

Credit activity remained strong in April. Domestic bank lending began to strengthen in the middle of last year as a result of the gradual recovery in economic activity. In the middle of last year the year-on-year growth rate was around 12%, compared with 17.1% in April this year. Total lending from February to April was approximately SIT 50 billion a month, compared with around SIT 30 billion a month in the same period last year. The stronger credit activity began last year with lending to enterprises. This year lending to households has also picked up appreciably in recent months.

Foreign currency borrowing has been accelerating since November last year, particularly among enterprises. In the first four months of this year foreign currency credit accounted for two-thirds of the total lending growth, while long-term tolar loans made up one-fifth and short-term tolar loans one-tenth. The year-on-year growth in foreign currency lending is therefore still rising, from 35.3% in December last year to 44.3% in April this year. The reasons for the stronger foreign currency lending are the lifting of restrictions on foreign currency lending, the lower interest rates on foreign currency lending, the faster growth in banks' foreign currency deposits and borrowing abroad.

The composition of tolar lending continues to be dominated by long-term loans. In the first four months of this year long-term lending in tolar totalled SIT 31.7 billion, while short-term lending in tolar was SIT 17.5 billion. In April the year-on-year rate of growth of long-term lending in tolar was 13.2% and of short-term lending in tolar 7.7%.

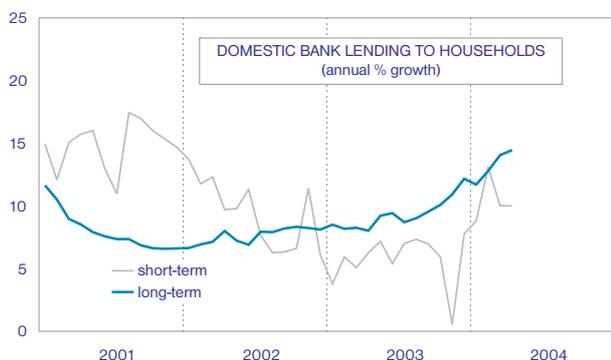

Borrowing by enterprises has strengthened since the middle of last year as a result of somewhat stronger economic activity. In the middle of last year the year-on-year growth in lending to enterprises was around 14%, compared with 19.1% in April this year. Borrowing by enterprises in March of SIT 36.4 billion represented one of the largest monthly increases in the past year. April growth was SIT 21.0 billion.

Enterprises are largely financing the stronger economic activity through domestic credit. Foreign credit continues to fall as a share of total domestic and foreign credit. In the second half of last year it represented almost one-third of the total, compared with just over one-seventh in the first quarter of this year. The fall in the share of foreign financing is due largely to the lifting of restrictions on domestic foreign currency lending, which to a large extent is replacing foreign financing. The other reason is the reduction in domestic interest rates.

Strong lending to households which began in February is continuing. From February to April lending to households totalled SIT 34.9 billion, which is more than half the total lent to households over the whole of last year. The year-on-year growth rate in April was 14.3%. Lending to households is dominated

by long-term tolar loans, which accounted for more than 80% of the lending in the period from February to April. Foreign currency lending to households remains modest.

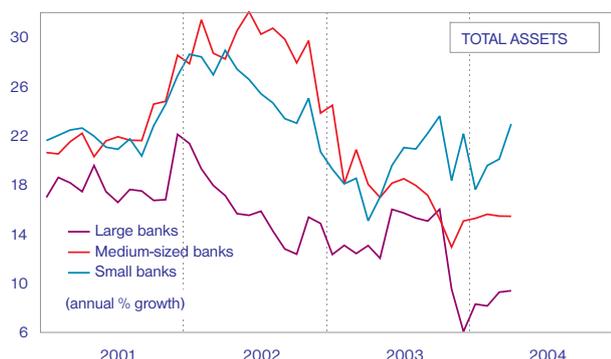

General government borrowing was up in January and February (SIT 37.9 billion) but substantially less in March and April (SIT 10.4 billion). Net government borrowing in the first four months of this year was solely in the form of securities. Long-term tolar loans raised were approximately equal to repayments of short-term tolar and foreign currency loans.

7. BANKING

Increasing year-on-year growth in banks' total assets continued in April. The year-on-year growth in April of 12.9% was 0.6 percentage points higher than in March. Current growth in April of 1% was similar to the rate in the previous two months.

In terms of volume of transactions small banks are growing fastest. The year-on-year growth in total assets of small banks in April was almost 23%, over seven percentage points more than the growth of medium-sized banks and over 13 percentage points more than the growth of large banks. Small banks also recorded the fastest current growth in April of 2.5%, followed by large banks (0.96%) then medium-sized banks (0.79%). Despite these trends the three largest banks' share of total banking system assets has changed very little in recent months. Differences in the rates of growth of total assets between banks remain large, with one particular bank growing its total assets at nearly 80% (compared with 12.9% growth in the banking system as a whole). The picture is similar for credit growth, with some of the smaller banks increasing their credit operations by over 50% (compared with 19.7% in the banking system as a whole).

Growth of investments in securities has strengthened slightly but is still broadly in line with its rate in recent months. Credit growth remains relatively strong. Growth in loans to households continued to strengthen in April.

In the first four months of this year loans grew by 5.2% (to enterprises by 5.4% and to households by 3.9%), while investments in securities grew by just 1.7%. Growth of investments in Bank of Slovenia securities remains below 10%, while that of government securities is close to 13%. The growth rate of other investments in securities fell by 3.4 percentage points to 16.0%. Year-on-year growth in loans remains at a high level (nearly 20%), as does the growth rate of loans to enterprises (20.3%). Growth of loans to households is increasing. In April it rose by just under 0.4 percentage points to 14.5%. In November last year it was under 10%.

Foreign currency lending by banks is appreciably more robust than tolar lending. In recent months growth in long-term foreign currency lending has strengthened further.

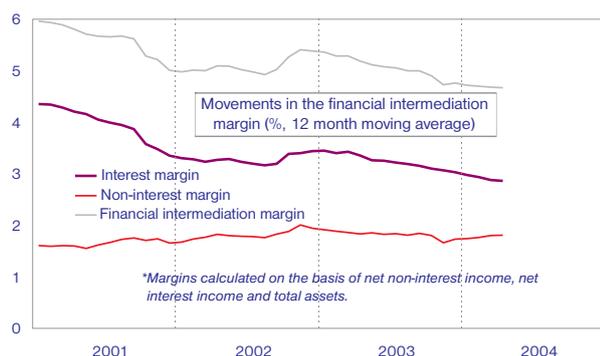

The year-on-year growth in foreign currency lending at the end of April was 45%, while the growth rate of tolar loans was just 11.2%. The year-on-year rate of growth in long-term foreign currency lending has risen to 45.2% from 34.0% at the start of the year. Growth of short-term foreign currency loans was similarly high. The share of foreign currency loans outstanding in total lending rose by 0.6 percentage points to 30.6%. This year more than two-thirds of lending by banks has been in foreign currency (compared with 58% in the last 12 months). The decline in the importance of direct lending to enterprises from abroad, as the need for such borrowing has fallen, has contributed to the high level of domestic foreign currency lending. Banks (especially foreign banks) have good access to foreign sources, and foreign currency saving has also been growing in recent months. In addition, regulatory restrictions on domestic foreign currency lending were lifted some time ago.

INCOME STATEMENT SIT billions; growth in %			2004	y.o.y.
	2002	2003	Jan-Apr.	growth

Taxes	16.5	16.9
Profit after tax	29.5	32.3

Year-on-year deposit growth remains weak (6% in April) while bank borrowing through foreign institutions continues to grow strongly.

The growth in bank borrowing through foreign banks is close to 60%. On the deposit side, growth in foreign currency deposits is increasing, from 6.3% in March to 9.7% in April year-on-year, more than double the rate of growth of tolar deposits (4.8%). Along with sources of financing abroad, faster growth in foreign currency deposits is also contributing to the increased foreign currency lending by banks.

Among non-bank deposits, demand deposits have been growing fastest in the past year. Non-bank demand deposits grew by 17.2% and short-term time deposits by just 4.0% in the twelve months to April, while long-term non-bank deposits fell by 14.4% in the last year.

Net interest income fell again year-on-year, while strong growth in non-interest income enabled the banks' gross income to rise by 5.9%.

The banks' gross income grew more slowly than their total assets. Interest expenses fell faster than interest income. The banks' higher non-interest income (up by SIT 7 billion) compensated for a drop of SIT 2.7 billion in net interest income.

The banks' operating costs continue to be low this year, while provisioning costs are SIT 5 billion higher than the corresponding costs last year.

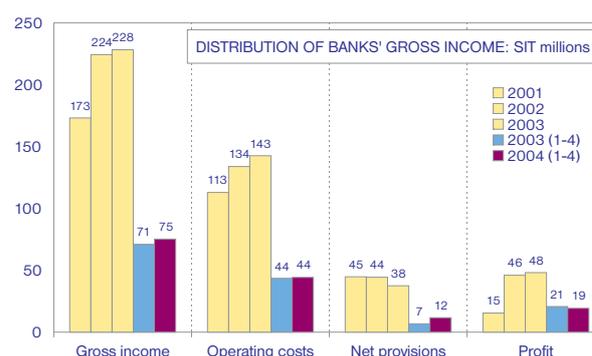

The former have risen by just 1.6% this year, several times less than the growth in the volume of transactions. The same applies to labour costs, which this year have grown by 4.4% year-on-year and in absolute terms are only SIT 1 billion higher than the comparable costs last year. This made possible a similar level of profit to last year in the four months to the end of April.

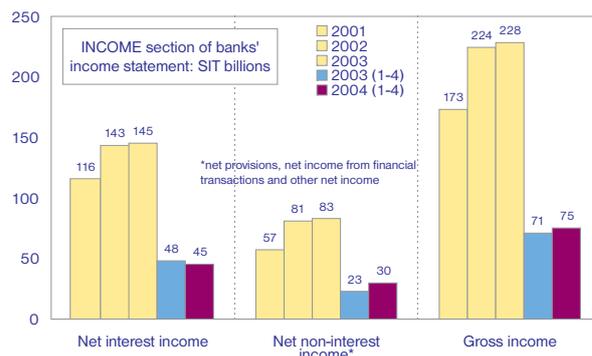

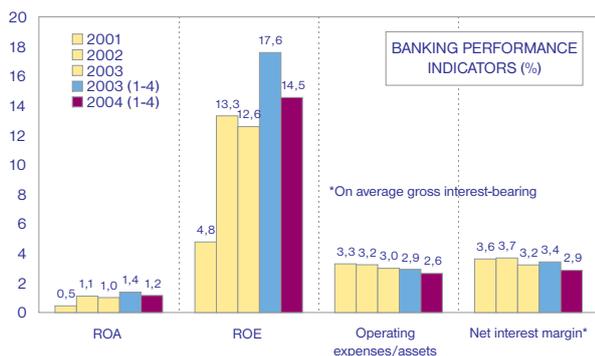

In April the banks' margins calculated for the last twelve months remained similar to the March levels. But the interest margin this year compared to the same period last year is significantly lower.

Measured as a ratio to total assets (calculated for the last twelve months) the interest margin at the end of April was just under 2.9%. The non-interest margin was maintained at 1.8% in April and thus the financial intermediation margin remains around 4.7%. The interest margin calculated as a ratio to interest-bearing assets is as much as 0.6 percentage points lower than in the comparable period last year (2.85% this year).

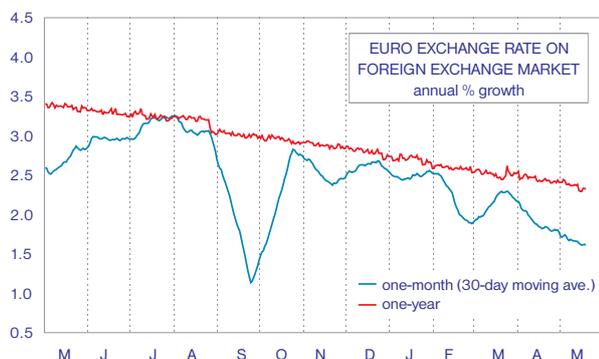

As far as the indicators are concerned, the main improvement this year has been in the ratio of non-interest income to operating costs and the ratio of provisioning costs to net income.

Interest has fallen as a share of the banks' gross income. The ratio of non-interest income to operating costs has risen by 14.9 percentage points this year to 67.5%, while the ratio of provisioning costs to net income has risen by 13.1 percentage points to 37.7%. Because of the reduction in net interest and the relatively strong growth in non-interest income, and in particular because of net financial operations, net interest fell as a share of gross income by 7.4 percentage points to 60.3%. In the first four months of this year return on assets was down 0.2 percentage points compared to the corresponding period last year to 0.9%, while return on equity was down 3 percentage points to 14.5%.

8. EXCHANGE RATE

The average euro exchange rate rose in April by 0.4 tolars compared with March to stand at SIT 238.3 per euro. Its monthly growth rate was slightly lower than in March at an annualised 1.8%. The rate of year-on-year growth has also fallen. In April it was 2.5%.

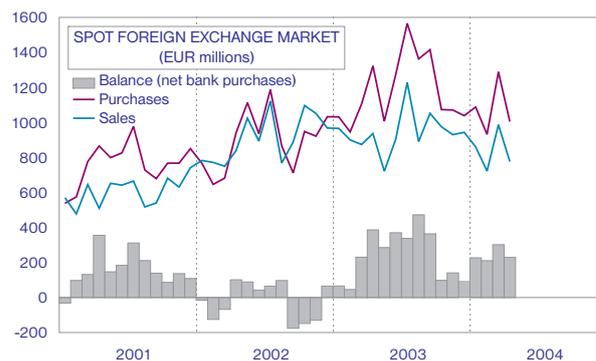

Excess demand for foreign exchange was again recorded on the spot, forward and exchange office markets in April. This was worth SIT 14.3 billion on total transactions of SIT 559.7 billion. The biggest contribution came from excess demand for foreign currency at exchange offices of SIT 10.5 billion, while net demand for foreign exchange from enterprises was worth SIT 6.4 billion. The supply side was again filled by non-residents, who supplied SIT 2.7 billion net in foreign exchange.

1) Basket/effective exchange rate: basket of 7 currencies of Slovenia's main foreign trade partners (excluding Croatia), weighted by shares in Slovenian goods trade. From January 2002 onwards three currencies are taken into account (EUR, USD, CHF).
Sources: BoS, Statistical Office of the Republic of Slovenia and various foreign sources.

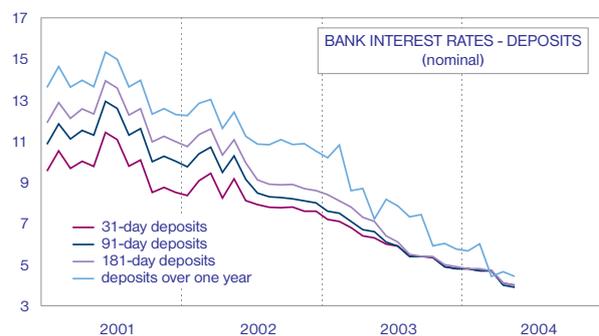

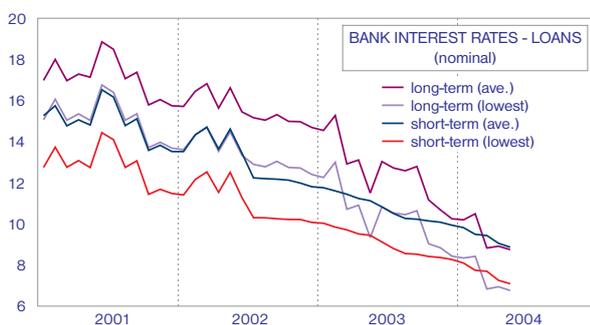

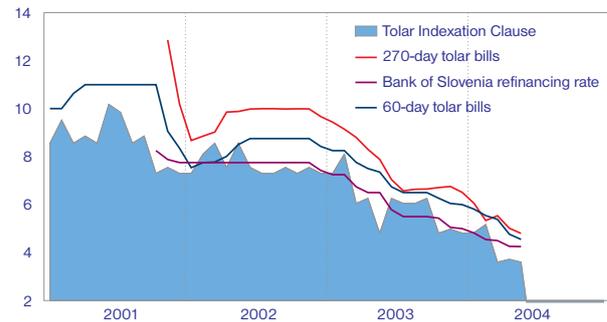

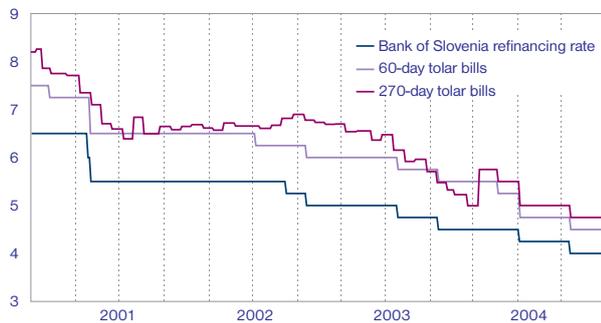

In April a slightly lower level of activity was recorded by non-residents on the spot and forward foreign exchange markets. On total transactions of SIT 167.3 billion, non-residents purchased SIT 39.5 billion net on the forward market and sold SIT 42.2 billion net on the spot foreign exchange market.

Exchange offices recorded slightly higher turnover than in the previous period. Total trade was worth SIT 71.7 billion, the highest total since the start of the year. Most of the trade by enterprises was recorded on the spot foreign exchange market. On total transactions of SIT 304.9 billion, enterprises purchased SIT 5.4 billion net on the spot foreign exchange market.

At the start of April and the start of May the Bank of Slovenia intervened in the foreign exchange market twice to reduce the target rate of growth of the exchange rate. The Bank of Slovenia cut the target rate of growth of the exchange rate by 0.25 percentage points in April to 1.75%, and at the start of May by a further 0.25 percentage points to 1.5%. Bank of Slovenia intervention in the foreign exchange market is a result of the reduction in interest rates on certain central bank instruments. The uncovered interest parity consequently remained at 1 percentage point.

9. INTEREST RATES

Following the rate cut in early April, at the start of May the Bank of Slovenia again cut interest rates on certain instruments. The rate cut amounted to 0.25 percentage points, except on lombard loans on which the rate cut amounted to 0.5 percentage points. The interest rate on lombard loans is now 5.75%, on 60-day tolar bills 4.5% and on 270-day tolar bills 4.75%. The price of Bank of Slovenia foreign exchange buy-sell swaps fell to 2%, while that of sell-buy swaps fell to 0.5%. The refinancing rate at the Bank of Slovenia also fell, to 4%.

In April the interest rate on the money market fell by 0.52 percentage points compared to the previous month, reaching an average of 4.92%. The rate peaked at 5.2% in early April, and reached its lowest level of 4.6% on 21 April. The interest rate on overnight deposits (SIONIA) was cut by a similar amount. On average it was by 0.6 percentage points lower than in March.

The yield curve of the Slovenian interbank interest rate (SITIBOR) fell again in April compared to March. The fall ranged from 0.5 to 0.6 percentage points depending on maturity.

In April the Bank of Slovenia made four closed offers to banks to subscribe to 270-day central bank bills. The Bank of Slovenia adjusted its quotas in line with market conditions. At the first three auctions in April the quota was SIT 1 billion, while at the last auction it was SIT 3 billion. In the first half of May the Bank of Slovenia made two offers of SIT 3 billion worth of 270-day bills to selected banks.

Strong excess demand dominated the auctions of one-month treasury bills in April. The average auction interest rate came down gradually. At the last auction in April (on the 28th) it was 4.50%. High excess demand was also recorded at auctions of three-month and six-month treasury bills in April. The interest rate fell below 5%. On three-month treasury bills it amounted to 4.40% (April 26th) and on six-month treasury bills only 4.30% (April 26th).

Short-term bank interest rates fell again in April, while long-term rates were raised slightly. On the assets side, interest rates on short-term loans to non-financial corporations fell by 0.3 percentage points. Interest rates on consumer loans came down by 0.4 percentage points. Interest rates on long-term loans to non-financial corporations were raised by 0.1 percentage points, while those on housing construction loans were raised by 0.2 percentage points. On the liabilities side, interest rates on deposits with agreed maturity of less than one year again fell. The reduction ranged from 0.6 to 0.7 percentage points depending on maturity. The interest rate on deposits with agreed maturity of more than one year increased slightly in April, by 0.2 percentage points on deposits with agreed maturity of one to two years and 0.3 percentage points on deposits with agreed maturity of more than two years. Compared with interest rate levels in the euro area, the biggest differential in March was in short-term loans to non-financial corporations (5.54 percentage points). The smallest gap with euro area interest rates was in consumer loans (2.03 percentage points).

12. Safekeeping and administration of securities

IV. NOTES ON METHODOLOGY

General Notes

Sectors

External sector consists of non-residents.

Residents of the Republic of Slovenia are defined as:

- companies and other legal entities with a registered office in the Republic of Slovenia, except their branches abroad;
- branches of foreign companies entered in the Companies Register of the Republic of Slovenia;
- sole proprietors or natural persons, independently performing business activities as their prime occupation, with a registered office in the Republic of Slovenia or having permanent residence in the Republic of Slovenia;
- natural persons with permanent residence in the Republic of Slovenia;
- natural persons temporarily residing in the Republic of Slovenia holding a residential or working visa valid for no less than six months;
- diplomatic, consular and other representative offices of the Republic of Slovenia abroad financed from the Budget as well as Slovene citizens employed at these representative offices and their family members.

All other persons and entities shall be deemed non-residents.

Domestic sector is broken down to monetary and non-monetary sector.

Monetary sector consists of the Bank of Slovenia and commercial banks. Commercial banks (hereinafter "banks") are deposit money banks that accept sight deposits and have banking licenses granted by the Bank of Slovenia. Only domestic banks, owned by residents or non-residents, are included.

Non-monetary Sector is further divided into following sub-sectors: Non-monetary financial institutions, General Government, Individuals, Enterprises and Non-profit institutions.

Non-monetary financial institutions include Savings banks, Co-operatives and other financial institutions.

General Government comprises Central Government and Other General Government. **Central Government** mainly consists of the Budget. **Other General Government** contains local communities and entities established by General Government - institutions, funds, companies, clubs and other societies engaged in education, health, culture, social insurance, trade unions and other organizations.

Households (Individuals) include resident individuals.

Enterprises comprise firms in private or public ownership or control, except for those included in the General Government.

Non-profit institutions consist of all entities, not included in any other sector.

Characteristics of the data

Data present stocks on assets and liabilities at the end of the period.

Data on stocks nominated in foreign currencies are converted into Tolars using Bank of Slovenia end of period middle exchange rate.

Data in tables are not seasonally adjusted.

Table: Republic of Slovenia: general information

Table shows basic general data on Slovenia and its economy. In the "latest actual" column the latest available data for the current year are published. Data sources for the table are Bank of Slovenia, Ministry of Finance and The Statistical Office of the Republic of Slovenia.

1. MONEY AND BANKS

Last published data are preliminary.

Sectorization of banks' data as from April 30, 1999

For data from April 30, 1999 on a new sectorization has been implemented according to **Regulation on Introduction and Implementation of Standard Classification of Institutional Sectors**, (hereinafter "SKIS") - Official Gazette 56/98. SKIS which implemented a national standard for economic sectorization is based on European System of Accounts 95 and is in accordance with System of National Accounts 93. According to SKIS the sectors of the economy are: 1.) Non-financial corporations, 2.) Financial corporations (central bank, commercial banks, other financial institutions), 3.) General government, 4.) Households, 5.) Non-profit institutions serving households and 6.) External Sector (non-residents). There has been no change regarding definition of *Non-resident*.

Domestic sector is broken down to monetary sector and non-monetary sectors.

Monetary sector consists of the Bank of Slovenia and commercial banks. Commercial banks (hereinafter "banks") are deposit money banks that accept sight deposits and have banking licenses granted by the Bank of Slovenia. Domestic banks, owned by residents or non-residents, are included.

Non-monetary Sectors are: Non-financial corporations, Non-monetary financial institutions, General government, Households, Non-profit institutions serving households.

Non-financial corporations are legal persons - market producers of goods and non-financial services.

Non-monetary financial institutions consist of Savings banks, Co-operatives and *Other financial institutions*. **Other financial institutions** are: 1. Other financial intermediaries, except insurance corporations and pension funds (mutual funds, investment funds and financial leasing comp.), 2. Financial auxiliaries (securities brokers, stock exchanges) and 3. Insurance corporations and pension funds.

General government consists of: 1. Central government (administrative departments of state and central government agencies), 2. Local government (local administration, local agencies) and 3. Social security funds.

Households: resident individuals as consumers and resident individuals as sole proprietorships and partnerships being market producers and having no independent legal status. The data of the latter have been prior to April 30, 1999 included in the sector Enterprises.

Non-profit institutions serving households are clubs, political parties, trade unions, churches or religious societies, humanitarian and charity organizations, professional societies.

Table 1.1.: Monetary Aggregates

Table 1.1 shows stock data at the end of month for base money, monetary aggregates M1, M2 and M3, calculated according to the national definition and according to the harmonised definition of the European Central Bank (hereinafter: ECB).

The definition of base money is defined as the sum of: *Banknotes in circulation, Banks' settlement accounts, Overnight deposit and Other deposits at the Bank of Slovenia* (Savings banks' settlement accounts, Savings banks' and Savings and loan undertakings' reserve accounts, transactional accounts of the Central and Local Government).

Data sources are banks' and Bank of Slovenia's bookkeeping data, which refer to the end of the month.

Calculation of monetary aggregates according to the national definition is shown on the liabilities' side of Table 1.2: Monetary Survey - Consolidated Balance Sheet of the Monetary System (See methodological notes referring to Table 1.2).

Harmonised monetary aggregates for Slovenia are calculated according to ECB's definition of harmonised monetary aggregates of euro area, which is evident from documents published on web pages of the ECB (<http://www.ecb.int>). Main differences between the two definitions of monetary aggregates are as follows:

- limited maturity of items included (harmonised aggregates include liabilities of up to 2 years only),
- equal treatment of the foreign exchange liabilities (which are, in harmonised aggregates, included into adequate items together with those in domestic currency),
- status of the monetary neutral sector (the central government in the harmonised aggregates has the status of a monetary neutral sector) and
- inclusion of the money market fund shares / units into M3.

Composition of harmonised monetary aggregates, as defined by the ECB is:

- HM1 contains *currency in circulation* and *overnight (sight) deposits*.
- HM2 includes beside HM1 also *deposits with agreed maturity of up to 2 years* and *deposits redeemable at notice of up to 3 months*.
- HM3 includes HM2, *repurchase agreements* and *debt securities with a maturity of up to 2 years*. *Money market fund shares / units* financial instrument, which is according to ECB's definition also part of HM3, will be included in calculation when such institutions appear in Slovenia.

HM2 and HM3 are, for the period prior to July 2002, partly calculated as estimation, because of the unavailability of relevant bookkeeping breakdowns.

Table 1.2.: Monetary Survey - Consolidated Balance Sheet of the Monetary System

Table 1.2 shows consolidated balance sheet of all banks' and Bank of Slovenia at the end of the month. Data for banks are aggregated.

Domestic assets consist of banks' and Bank of Slovenia's claims on General Government arising from succession to the former SFR Yugoslavia and the bank rehabilitation program, and claims from loans and securities on other non-monetary sectors. Claims from succession and the bank rehabilitation program represent: claims of the Bank of Slovenia on the Succession Fund of the Republic of Slovenia (on account of the former National Bank of Yugoslavia Dinar cash), counterpart claims for Bank of Slovenia liabilities to the International Monetary Fund, government guaranteed bank rehabilitation bonds, government bonds for unpaid foreign currency deposits and claims on the former National Bank of Yugoslavia for foreign currency deposits.

Other assets include fixed assets of banks and of the Bank of Slovenia and some other items (doubtful claims, etc.).

In September 2003, the liability part of the Table changed due to methodological changes in the calculation of monetary aggregates under the national definition, because of gradual harmonisation with the definitions of the European Central Bank (changes were made to all time series).

To aggregate M1, a vista Savings deposits at banks were added, and therefore, it consists of currency in circulation and demand deposits at banks (including a vista Savings deposits) as well as at the Bank of Slovenia.

To aggregate M2, Tolar restricted deposits and securities in Tolar including subordinated debt were added, so that the aggregate consists in addition to M1 also of Tolar time deposits at banks, and Government time deposits at the Bank of Slovenia and of Tolar securities.

To aggregate M3, other foreign currency liabilities to central government and securities in foreign currency were added, so that M3 consists of M2 and foreign currency deposits and securities at banks.

Other liabilities consist of capital and reserves of banks and of the Bank of Slovenia and also include some other items.

In the Table as from April 30, 1999 in conformity with SKIS, items of assets and liabilities to other general government mean assets and liabilities to both Local Government and Social Security Funds. By analogy, enterprises mean non - financial corporations and non - profit institutions serving households, and individuals mean households.

From July 31, 1996 onwards, the data for Komercialna banka Triglav are no longer included in banks' data due to its bankruptcy.

Foreign assets/Bank of Slovenia and *Foreign assets/Deposit money banks* were changed because of changes in Tables 1.3. and 1.4. for the period from April 2000 onwards.

Table 1.3.: Balance Sheet of the Bank of Slovenia

The Table shows the Bank of Slovenia's assets and liabilities at the end of month.

Foreign Assets consist of: foreign currency, deposits abroad (sight and time deposits, from April 2000 on also foreign exchange deposits held by BS on the basis of repurchase agreements) first class securities of foreign issuers, monetary gold, reserve position and SDR holdings at the International Monetary Fund and other claims. *Other claims* mainly include balances on fiduciary accounts and with international financial organization.

Because of consolidation of statistical and bookkeeping records in February 2003, *International monetary reserves* are not presented as subitem of Foreign assets. International monetary reserves are shown in Tables 3.12. and 1.9..

Claims on General Government consist mainly of net claims on the National Bank of Yugoslavia taken over by the Succession Fund of the Republic of Slovenia. Claims on the state budget, which are the counterpart of the succeeded liabilities to the International Monetary Fund, are also included.

Repurchase agreements include loans extended to banks based on securities and foreign currency (currency swap). From April 2000 on the amount of the foreign currency swap is shown as a part of the foreign assets of the Central Bank, because of the gradual permanent purchase of foreign currency from the part of Central Bank. In accordance to this are claims based on currency swap with domestic banks shown for the period up to March 2000 in the item *Repurchase* and thereupon in the item *Deposits*.

Other claims include some Bank of Slovenia's small deposits with banks and advance payments to the banks for repayments of Bank of Slovenia bills sold to other buyers through banks as agents.

General Government Deposits comprise deposits of Central Government budget.

Restricted deposits mainly result from deposits earmarked for import payments and deposits covering letters of credit, guarantees and credits taken abroad.

Money transfers in transit comprise money in transit.

Table 1.4.: Balance Sheet of Deposit Money Banks

The Table summarizes data on assets and liabilities of banks at the end of the month.

Demand deposits comprise giro accounts of enterprises and non-profit institutions, General Government, non-monetary financial institutions and giro and current accounts of households (see Table 1.6.).

Savings deposits include short and long-term tolar savings deposits of households (see Table 1.6.).

Time deposits consist of short and long-term time deposits of households, General Government, non-monetary financial institutions, enterprises and non-profit institutions (see Table 1.6.).

Restricted deposits represent deposits of enterprises and non-profit institutions, General Government and individuals to be used for money transfers to foreign countries or in cover of letters of credit, loans taken abroad or euro-checks, and can also be used for foreign currency exchange office transactions.

Note 1: In June 1996 foreign liabilities of banks for the undue foreign debt of former SFR Yugoslavia in the amount of SIT 49,027 million were taken over by the Government. Liabilities of banks to the Government were increased for the same amount. The banks decreased their foreign liabilities and claims on the Government for the part of matured allocated debt which they had been repaying to the government fiduciary account since January 1994 totalling SIT 18,078 million.

Bank of Slovenia's claims on and liabilities to banks are equal to the corresponding items in the banks' aggregated balance sheet with few exceptions: Item 'Reserves' (Giro and reserves accounts) on the assets side of banks' balance sheet is almost the same as item 'Deposits of banks' (Giro and reserves accounts, foreign currency deposits) on the liabilities' side of the Bank of Slovenia's balance sheet (Table 1.3.). Similar applies to items 'Liabilities to the banking system' arising from the Bank of Slovenia loans and 'Claims on domestic banks' based on loans in the Bank of Slovenia balance sheet (Table 1.3.). Discrepancies result from differences in accounting accuracy.

In February 2003 were items *Currency and Deposits* and *Loans from BS* diminished by the amount - claim i.e. liabilities based on currency swap of central banks with domestic banks, for period from April 2000 on. (More in Methodological notes for Table 1.3. - *Repurchase*). Total assets i.e. total liabilities were diminished accordingly.

Claims on and liabilities to domestic non-monetary sectors are shown in detail in Tables 1.5. and 1.6. Foreign assets and foreign liabilities are shown in detail in Tables 1.7. and 1.8.

Table 1.5.: Deposit Money Banks' Claims on Domestic Non-monetary Sector

The Table shows banks' claims resulting from loans and securities classified by domestic non-monetary sectors, which are also represented in Table 1.4. in item 'Claims on non-monetary sectors - Total'. As from April 30, 1999 SKIS has been implemented in the sectorial distribution of the economy and therefore:

- the sector *Enterprises and non-profit institutions* comprises the data on SKIS Sectors *Non financial corporations* and *Non-profit institutions serving households*;
- the sector *Central government* comprises the data on SKIS subsector *Central government*;
- the sector *Other general government* comprises the data on SKIS subsectors *Local government* and *Social security funds*;
- the sector *Individuals* comprises the data on SKIS sector *Households*;
- the sector *Non-monetary financial institutions* comprises the data on *Savings banks* and *Savings cooperatives* as well as the data on SKIS sector *Other financial institutions*.

Marketable securities are long or short-term securities acquired and held by a bank with the intention of reselling them in the short term.

Investment securities are long or short-term securities acquired and held for yield or capital growth purposes and are usually held to maturity.

Table 1.6.: Deposit Money Banks' Liabilities to Domestic Non-monetary Sector

The Table shows banks' liabilities from deposits of domestic non-monetary sectors which correspond to the 'Liabilities to non-monetary sectors - Total' in Table 1.4.

As from April 30, 1999 SKIS has been implemented in the sectorial distribution of the economy and therefore:

- the sector *Enterprises and non-profit institutions* comprises the data on SKIS Sectors *Non financial corporations* and *Non-profit institutions serving households*;
- the sector *Total General government* comprises the data on SKIS sector *General government*;
- the sector *Individuals* comprises the data on SKIS sector *Households*;
- the sector *Non-monetary financial institutions* comprises the data on *Savings banks* and *Savings cooperatives* as well as the data on SKIS sector *Other financial institutions*.

Table 1.7.: Deposit Money Banks' Claims to Non-residents

The Table shows banks' claims to non-residents by currency- Tolars and foreign currencies. Deposit Money Banks' Claims to non-residents are shown in Table 1.4. in item 'Total – Foreign assets'.

In February 2003 was item *Deposits* diminished by the amount - claim based on currency swap of domestic banks with central banks, for period from April 2000 on. (More in Methodological notes for Table 1.3. - *Repurchase*). Item Total claims on non-residents was diminished accordingly.

Table 1.8.: Deposit Money Banks' Liabilities to Non-residents

The Table shows banks' liabilities to non-residents broken by currency- Tolars and foreign currencies. Deposit Money Banks' Liabilities to non-residents are shown in Table 1.4. in item 'Total – Foreign liabilities'.

Table 1.9.: Bank of Slovenia 10-day balance sheet

In April 2002 the definition of base money has been changed to the sum of: *Banknotes in circulation, Banks' settlement accounts, Overnight deposit and Other deposits at the Bank of Slovenia* (Savings banks' settlement accounts, Savings banks' and Savings and loan undertakings' reserve accounts, transactional accounts of the Central and Local Government).

The data time series have been recalculated according to the change in definition.

The off balance items *Buy/sell foreign exchange swap* and *Sell/buy foreign exchange swap* are from April 2003 on are included in the table.

Bank of Slovenia 10-day balance sheet together with off balance items is in terms agreed for publication shown on web page:

http://www.bsi.si/html/eng/financial_data/hit/balance_bs_dekadna.html

2. FINANCIAL MARKETS**Interest rates (Table 2.1. - 2.6.)**

Annual interest rates.

r = real rate over Tolar indexation clause

r(D) = real rate over foreign exchange indexation clause

n = overall nominal rate

TOM = Tolar indexation clause

EUR = foreign exchange clause

Table 2.1.: Bank of Slovenia Interest Rates

Discount rate (End of period): Indicative rate posted by the Bank of Slovenia. It was abolished as of 1st January 2003.

Lombard loan: Within the framework of standing lombard facility Bank of Slovenia provides one-day lombard loans to banks and savings banks with securities used as collateral. The pledged securities should amount to 110% of the amount of lombard loan.

Interest rate on banks' obligatory reserves: 1 percent per year since October 1991.

Penalty rate is generally used in case of overdue payments. The penalty rate is determined by the Law on the legal penalty rate since 28.06.2003.

Repo interest rate for the temporary purchase of Bank of Slovenia's Bills in foreign currency with obligatory repurchase in 7, 28 or 60 days was the weighted arithmetic average of daily repo interest rates. 28 day repo was abolished in August 2000, 60 day repo in February 2003 and 7-day repo in January 2004. The repo interest rate is given as the effective interest rate.

The overnight-deposit interest rate is an interest rate applying to the deposits placed by banks and savings banks on an overnight term with the Bank of Slovenia.

Liquidity facilities of last resort were permanently available to banks and saving banks (till March 2001 only to banks) in case of unexpected liquidity constraints. The interest rate applied was the penalty rate. It was abolished with October 2002.

The annual averages of interest rates are computed as simple arithmetic averages of monthly data, if such data are available.

Table 2.2.: Interbank Money Market Rates and Indexation Clause**Interbank market**

The figures are annual nominal interest rates for unsecured Slovenian tolar deposits on the Slovenian interbank market. Interest rate for overnight deposits (SIONIA) is weighted average interest rate for overnight deposits. Interest rate for deposits till 30 days is weighted average interest rate for deposits with maturity till 30 days.

The annual averages of interbank interest rates are computed as simple arithmetic averages of monthly data.

Tolar indexation clause

Tolar indexation clause (TOM) is annual interest rate, calculated by the Statistical Office of Republic of Slovenia and used for preserving the value of financial liabilities and assets in domestic currency.

TOM (monthly): since 5th August 1995: average of previous 3 months' inflation (until June 1995 indexation was based on so called R that was equal to the previous months' inflation rate, from 1st June till 4th August 1995 indexation was based on the average of previous 3 months' inflation); since February 1996: 4 months; since December 1996: 6 months; since May 1997: 12 months.

Financial liabilities and assets in domestic currency, with maturity less than 1 year, are not revalued since July 2002.

Foreign exchange indexation clause

Monthly rate is growth rate of Bank of Slovenia's end of month exchange rate for EUR (DEM) or USD.

Annual rate is computed from monthly rate on the conform basis, taking into account the actual number of days in the month and in the year.

Figures for 1993 to 1998 in columns 4, 6 and 8 represent growth of the category in the period December to December.

Table 2.3.: Interest Rates for Bank of Slovenia Bills

Tolar bills are registered securities subscribed by banks and savings banks with maturity of 60 and 270 days. Tolar bills with maturity of 7, 14 and 30 days were abolished on 3rd April 2000, bills with 2-day maturity were abolished as of 1st July 2001, 12-day tolar bills on 21st December 2001 and 360-day tolar bills on 14th January 2003. 60-day bills are offered on a permanent basis, 270-day bills were sold by auction till March 2004, afterwards are offered on a closed basis. Interest rates for tolar bills are nominal given, in the case of auctions they are effective rates.

Bills with warrants were short-term securities, issued in series of nominal value of half a million Tolars. They were purchased in Tolar at a discount and beard the p.a. nominal interest. The warrant attached to the security represented a hedge against inflation and exchange rate depreciation higher than officially projected. Interest rate for the last edition of the bills was indicated. Bills with warrants were abolished on 25th May 2000.

Twin bills were short-term bearer securities, issued in series in paper form. Through banks they were available to other legal persons and households. They were composed of a Tolar and a foreign currency part and were sold in Tolars at a discount, with redemption in Tolars and in German Mark. The Tolar part was revalued by Tolar indexation clause (TOM). Twin bills were abolished on 16th March 2000.

Foreign currency bills are transferable registered securities not issued in series. They are offered on permanent basis and can be purchased by banks (by other legal persons through banks till 3rd May 2000). They are sold for Euros (till 16.02.1999 for German Marks) or US Dollars at a discount with maturities of two to four months (foreign currency bills with maturities of 180, 270 and 360 days were abolished by March 2001). Interest rates for a certain type of bill in the table are those last valid in a period.

Table 2.4.: Average Commercial Banks' Interest Rates

Average interest rates (r and r(D)) are weighted arithmetic averages of the minimum and maximum interest rates.

Spread is the difference between the weighted minimum and maximum interest rate: $r_{\min} = r - \text{spread}$, $r_{\max} = r + \text{spread}$.

Nominal interest rates (n) are total annual interest rates.

The figures for the latest month are always provisional; updated figures in the following Monthly Bulletin are not marked with sign *.

With September 1995 was abolished the revaluation with the tolar indexation clause for obligations in

domestic currency till 30 days, with July 2002 also revaluation for all loans and deposits in domestic currency with maturity less than 1 year.

Note 1: With the 1st July 2002 the "Law on changes and completions of the law on penalty rate and tolar indexation clause" came into force. It prohibits the use of tolar indexation clause for assets and obligations in domestic currency with the maturity less than 1 year. At the same time have most banks also stopped using the foreign exchange clause for short-term loans and deposits, which has reduced the number of reporting banks and led to series breaks.

Table 2.5.: Average Effective Commercial Banks' Interest Rates

Average effective interest rates are calculated on the basis of the interest accounted in the period.

Because of the change in the frame of accounts for banks and savings banks since May 2002 the revalorization and interest incomes are no more represented separately, so the calculation of the real effective interest rates are no longer possible.

Table: Breakdown of banks' assets and liabilities by type of Indexation Clause

		Loans			Deposits			Total		
		TOM	D	NOM	TOM	D	NOM	TOM	D	NOM

Network of Commercial Banks (Table 2.7.)

Table 2.7.: Network of Commercial Banks

Note 1: In the number of head offices two banks with the license for operation pursuant to the Constitutional Law only are included (Kreditna banka Maribor d.d. and Ljubljanska banka d.d. Ljubljana).

Note 2: Statistical Regions, Source: Statistical Office of the Republic of Slovenia, March 31, 2000. Data up to year 2000 are presented according to Standard Classification of Teritorial Units - Statistical Regions of the Republic of Slovenia, January 1, 1999.

Note 3: Data referring to the Postal bank of Slovenia do not include units of the Post of Slovenia that operate for the Postal bank of Slovenia on the contractual basis.

Note 4: Source: Statistical Office of the Republic of Slovenia: Rapid Reports, Population, No. 159 / 2002.

ATM: Automated teller machine that permits the withdrawal of cash from accounts using plastic (cheque) cards and the use of other services (balance inquiries, transfer of funds, etc.).

EFTPOS: Electronic funds transfer at the point of sale: the term refers to the use of payment cards at the retail location where the information is captured and transmitted by electronic terminals.

Modern Payment Instruments (Tables 2.8.)

2.8.1. Payment cards

Note 1: Credit cards: A card indicating that the holder has been granted a line of credit. The credit granted may be settled in full by the specific data each month (delayed debit card ie. charge card), or may be settled in part, with the balance taken as extended credit (credit card).

Note 2: Debit cards: A card which enables the holder to have purchases directly charged to funds on the cardholder's bank account.

Note 3: Cards, issued abroad: payment cards issued abroad and used for payments in Slovenia, mostly by non-residents.

Note 4: Volume and value of transactions abroad: use of cards issued in Slovenia for payments abroad.

Number of payment cards in circulation: number of valid payment cards held by residents and non-residents, issued in Slovenia. Data refer to the end of each quarter/year.

Number and value of payments refer to the use of payment cards in each quarter/year.

Domestic cards: payment cards issued by banks and enterprises residents in Slovenia without licence agreements with foreign issuers.

Licence cards: payment cards issued by banks and enterprises residents in Slovenia under licence agreements with foreign issuers.

Bank card: payment cards issued by banks.

Retailer cards: payment card issued by non-banking institutions, mostly for use at specific retail outlets.

Personal cards: payment cards issued to natural persons (family cards included).

Business cards: payment cards issued to legal entities.

2.8.2. Other Modern Payment Instruments

Note 1: Data refer to the end of each quarter.

Note 2: Data refer to transactions with credit and debit cards in Slovenia. Relevant data for previous periods are not available.

Note 3: Data refer to personal computer banking via Internet. Only debt transactions are included.

Ljubljana Stock Exchange (Tables 2.9. to 2.11.)

Table 2.9.: The Ljubljana Stock Exchange: Turnover by Market Segment and by Type of Securities

Shares – Privatization Investment Funds shares are not included.

PIF - Privatization Investment Funds shares.

Turnover is measured by a single counting.

Table 2.10.: The Ljubljana Stock Exchange: Market Capitalization and Turnover Ratio

Market capitalization by market segment and by type of securities is calculated as the sum of market capitalization of individual securities. Market capitalization of an individual security is calculated as the product of the number of listed securities and the market price at the end of period.

Turnover ratio is calculated as turnover in a period divided by market capitalization at the end of period.

Short-term securities are not included in calculations of market capitalization and turnover ratio.

Table 2.11.: The Ljubljana Stock Exchange: Slovenian Stock Exchange Index and Bond Index

SBI - Slovenian Stock Exchange Index (index value: January 1994=1000)

BIO - Bond Index.
SBI, BIO - value of SBI and BIO at the end of period.
dT - change of index value by points.
d% - change of index value in percentage.
Min, Max - minimum and maximum value of index in a period.

Exchange rates (Tables 2.12.1. to 2.13.4.)

Tables 2.12.: Selected Bank of Slovenia Exchange Rates- Average Rates

The tables show Bank of Slovenia middle rates. Annual rates are computed as arithmetical averages of monthly rates. Monthly averages are computed as arithmetical averages of daily rates (Sundays and holidays are not included).

As from 1st January 1999, with introduction of European Monetary Union, the European Currency Unit (XEU) was replaced by the Euro (EUR) at the exchange rate 1 : 1. Fixed exchange rates between the Euro and the national currencies of the EMU Member States (valid from 1st January 2001):

1EUR =	40.33990 BEF
=	1.95583 DEM
=	340.75000 GRD
=	166.38600 ESP
=	6.55957 FRF
=	0.78756 IEP
=	1936.27000 ITL
=	40.33990 LUF
=	2.20371 NLG
=	13.76030 ATS
=	200.48200 PTE
=	5.94573 FIM

Due to the introduction of Euro in January 2002 the exchange rates of members of EMU currencies (ATS, FRF, DEM, ITL) are replaced by the exchange rates of some EU accession countries (CZK, HUF, PLN, SKK).

Introduction of a new currency, the Kuna (=1,000 previous Croatian Dinars) on 30th May 1994.
The Polish zloty was denominated on 1st January 1995 at the exchange rate 1 new zloty for 10.000 old zlotys.

Tables 2.13.: Turnover and Foreign Exchange Market

Annual rates are computed as arithmetical averages of monthly rates. Monthly rates are averages computed from daily rates on working days, weighed with turnover. Foreign currency exchange offices also report transactions on Saturdays, not shown in the table, but included in the monthly and annual totals.

Totals also include transactions between banks and enterprises and between banks solely. In addition to that the transactions between enterprises are included until 30th September 1999 and the transactions of banks with non-residents and households from 1st October 1999.

On the spot exchange market the timing of settlement is at latest 2 working days from the agreement. The forward exchange market is designed for transaction where the timing of settlement is at least 2 working days after the agreement.

The data by the contract agreement are defined by the agreement time of the transaction. The data by the contract settlement are time defined by the settlement time of the transaction.

Data for the turnover on the forward exchange market are available from October 1999. Also the data for turnover by the settlement are available only from October 1999.

3. BALANCE OF PAYMENTS AND EXTERNAL POSITION

Balance of Payments (Tables 3.1. to 3.4.)

General notes

In most respects the Slovenian Balance of Payments (BOP) conforms to the methodology of the IMF's *Balance of Payments Manual, fifth edition (1993)*.

Characteristics of the Data

Minus sign (-) indicates imports or surplus of imports over exports in the current account, increase in assets or decrease in liabilities in the capital and financial accounts, and growth of reserve assets. Data for transactions are converted from original currencies to USD using the daily Bank of Slovenia exchange rates, or average exchange rates of the period if the exact date of transaction is not known.

Revision policy

Revision of balance of payments, international investment position and gross external debt data occur as follow:

- revision for **monthly data** are made with the release of:
 - the corresponding quarterly data;
 - the corresponding revised quarterly data;
 - the international investment position data for the corresponding year; and
 - the revised international investment position data for the corresponding year;
- revision for **quarterly data** are made with the release of:
 - the data for the following quarter;
 - the international investment position data for the corresponding year; and
 - the revised international investment position data for the corresponding year;
- revision for **annual** international investment position and external data are made with the release of the data for following years.

Data sources

BOP is compiled on the basis of monthly available data on transactions (ITRS), stock positions and estimates.

- Reports on transactions
 - accounts of domestic banks held with correspondent banks abroad (including the central bank),
 - nonresident accounts held with domestic banks,
 - non-bank resident accounts abroad,
 - other accounts between residents and nonresidents,
 - payments between residents and nonresidents in Slovenian Tolars.

Classification of transactions is using the descriptions of transactions provided by the banks' clients;

- **Customs declarations;**
- **Reports to the Bank of Slovenia on registered credits granted to and disbursed abroad;** For the period from 1997 also data on nature of direct payments from foreign creditors, which settle liabilities of domestic debtors to other nonresidents, are available from these reports.
- **Yearly surveys on balance and transactions with affiliated enterprises (SN)** is a source for reinvested earnings of direct investments.
- **Accounting data of the Bank of Slovenia;**
- **Commercial banks balance sheet data;**
- **Estimates.**
- **Monthly survey of duty free shops.**

There are several estimation models used in the BOP for the valuation of data on imports, incoming travel, labor income, Italian pensions (till the end of 1998), short-term commercial credits, foreign currency and deposits of resident households.

Current account**Goods**

Data for the General merchandise are based on customs declarations. Data on imports c.i.f. and exports f.o.b. are compiled by the Statistical Office. **Adjustments for valuation** of data on imports and **coverage** of data on imports and exports are made by the Bank of Slovenia. The imports data are adjusted from c.i.f. basis to f.o.b. basis by the coefficient which is equal to the weighted average of coefficients between the c.i.f. and f.o.b. values of imported goods (for the available sample), separately calculated for each type of merchandise, transport means and country of the exporter. The **coverage adjustments** are made for goods imported without customs declaration and for which data are available from ITRS or reports of duty free shops and consignment warehouses.

Services**Transport**

The source for recording of transportation services is the ITRS.

Travel

The ITRS sources used in the compilation of the **incoming travel** item include: a.) health and education related services, b.) payments made by nonresidents to Slovenian tourist agencies, c.) net withdrawals in tolar from nonresident accounts, d.) money spent in casinos by nonresidents, e.) data on sales of goods to nonresidents in duty free shops and consignment warehouses, f.) payments with credit cards and g.) sales of Tolars to nonresidents abroad.

The data on sales of Tolars to nonresidents in Slovenia are estimated on the number of border crossings of

foreign travellers and on the number of nights spent by foreign tourists.
Data source for the item expenditure on travel are ITRS and estimations.

Construction services

The source of data is ITRS. All construction works are recorded under construction services.

Insurance services

Premiums on life and non-life insurance are split into two components: (i) the service charge included in insurance services and (ii) the premium in a narrow sense recorded as current transfer. The calculation of service charge is based on a fixed percentage of the premium payments.

Government services

All transactions settled through accounts of Slovenian embassies abroad as well as transactions coded as government services settled through accounts of Slovenian banks with foreign correspondents are included in this item.

Income

The ITRS is used as a main source for recording of **compensation of employees**. As many wages are not paid through domestic banks, supplementary estimations of such receipts from the neighboring countries are made. Data on **reinvested earnings and income on equity** are available in an annual survey of Slovenian direct investors abroad and of foreign direct investment enterprises in Slovenia. The present recording of **other investment income** (interest income) is based on the actual payments.

Current transfers

In this item workers' remittances, insurance and other transfers of other sectors are included. The insurance item is calculated as a difference between the insurance premiums received and the claims paid on the credit side and vice versa on the debit side. The main source for other transfers are the ITRS and the customs documents.

Capital and financial account

Capital account

Capital transfers

Migrants' transfers covers not only payments recorded by domestic banks but also the changes in residency of accounts held with these banks.

Financial account

Direct investment

Direct investment is recorded on the basis of reporting of payments through domestic banks and of data from customs declarations. Data on reinvested earnings is based on yearly surveys on balance and transactions with affiliated enterprises (SN) and are included monthly as one twelfth of the yearly figure.

Until 1997 purchase and sale of all shares and equity have been included in this item.

From the beginning of 1997, purchase and sale of shares that assure more than 50 percent of company's equity, a control package of shares, shares issued by domestic companies on the primary markets with the purpose to increase the nominal capital of the company are included in this item, due to capital control measures. With the new Foreign Exchange Act in 1999 direct investment 10% rule is applied.

From 2001 onwards inter-company debt transactions between affiliated enterprises (10 percent or more capital share) are recorded as direct investment - other capital transactions. Until 2001 this kind of transactions are recorded as loans.

Portfolio investment

Until 1997 only data on sales and purchases of debt securities through banks were included in this item. Since February 1997 equity securities, not having the characteristics described in the note on Direct investment are included in this item too. With the new Foreign Exchange Act in 1999 portfolio investment transactions include all transactions below the 10% rule.

Loans

From 2001 onwards inter-company debt transactions between affiliated enterprises (10 percent or more capital share) are not recorded as loans, but are recorded as direct investment - other capital transactions.

Other investment

Other investments except equity between affiliated enterprises are included here and not under Direct investment. Short-term trade credits are estimated and recorded on net basis as change of assets. Estimation is based on comparison of data on imports and exports from customs declarations with corresponding settlements. Item currency and deposits of households is estimated by using data on net purchases of foreign currency in foreign exchange offices, net deposits to households' foreign exchange accounts at domestic banks, estimated expenditure of resident households abroad (see Travel).

Tables 3.1.: Balance of Payments 1988 - 1992

Excluding transactions with former Yugoslav Republics; processing is included in services, excluded in merchandise.

Note 1: For 1988 and 1989, Official sector data is included in Other sectors.

Note 2: For 1988 through 1990, Statistical errors include sales of claims from bilateral agreements to the former National Bank of Yugoslavia and its purchases of foreign currency through Slovenian foreign currency exchange offices.

Note 3: Reserve assets of the Bank of Slovenia.

Tables 3.2. and 3.4.: Balance of Payments

The data for the current year are revised monthly. Data become final according to the revision practice (see revision practice).

In June 2001 Slovenia acquired 16.39% share in holdings of former Yugoslavia with BIS (Bank for International Settlements), consisting of gold 16.9 mio SIT (EUR 77.8 million), foreign currencies 1.1 mio SIT (EUR 5.3 million) and shares 3.0 mio SIT (EUR 13.8 million). This transaction is not considered to be a balance of payments' flow, but a part of 'other changes' item, which reconciles the international investment position in consecutive periods.

Note 1: CD: customs declarations - foreign trade definitions (Statistical Office of Republic of Slovenia).

Note 2: June 1996: includes issue of government bonds in exchange for a part of allocated foreign debt in the amount of 63.7 mio SIT (EUR 374.9 million). Banks' liabilities under foreign loans are decreased for the same amount and transferred to liabilities to Government.

Note 3: Issues of government bonds:

- August 1996 (EUR 253.7 million);
- June 1997 (EUR 205.1 million);
- May 1998 (EUR 500.0 million);
- March 1999 (EUR 400.0 million);
- March 2000 (EUR 400.0 million) and in February 2001 (EUR 100.0 million);
- April 2001 (EUR 450.0 million).

Note 4: For 1993 and following, short-term claims include net changes in commercial credits (received and granted).

Note 5: Includes mostly BS fiduciary accounts. In June 1996 the amount of 21.2 mio SIT (EUR 124.9 million) was transferred to regular BS reserve accounts.

Note 6: Use of IMF credit (assumed upon membership in January 1993).

Note 7: Reserve assets of the Bank of Slovenia.

Note 8: The data for reinvested earnings for the year 2003 and 2004 is not available yet, therefore a five-year average (from 1998 to 2002) of reinvested earnings is included as an estimation in 2003 and 2004. In the year 2004 this estimation will be replaced with the actual data for reinvested earnings for the year 2003 and the five-year average (from 1999 to 2003) for the year 2004.

Note 9: From 2001 there is a time series break on the items direct investment and loans. From 2001 inter-company debt transactions between affiliated enterprises (10 percent or more capital share) are included in the direct investment item, before that they were included in loans item.

Table 3.5: Merchandise trade

Exports f.o.b. and imports c.i.f. Years 2003: provisional data (Source: Statistical Office of RS).

The effective exchange rate: Growth of index denotes growth of value of Tolar, and vice versa.

Note 1: Romania became a member of CEFTA on July 1, 1997. According to SORS its data are included in CEFTA figures also for previous periods.

Note 2: Bulgaria became a member of CEFTA on January 1, 1999. According to SORS its data are included in CEFTA figures also for previous periods.

3.6 Short-term commercial credits

Tables include positions of claims and liabilities of short-term commercial credits by countries/groups of countries in the last eight months. Data source is direct reporting of enterprises (reports SKV).

International Investment Position of Slovenia (Table 3.7.)

General notes

The international investment position is the balance sheet of the stock of external financial assets and liabilities. The financial items that comprise the position consist of claims on nonresidents, liabilities to

nonresidents, monetary gold, and SDRs.

Methodology of the international investment position (IIP) of Slovenia is based on the fifth edition of the *Balance of Payments Manual*, IMF, 1993. The Manual distinguishes four sectors - monetary authorities, general government, banks, and other sectors.

Revision policy

See revision policy notes for "Balance of Payments" (Tables 3.1. to 3.4.)

Data sources

Data sources for the international investment position of Slovenia are mainly the same as those for the balance of payments financial account. However, there are differences with some items as follows:

Direct investment

Data on direct investment are collected from:

- concessional surveys on equity investment (SN),
- reports on loans granted to or received from nonresidents,
- short term commercial credits with nonresidents (SKV),
- reports on accounts abroad.

Source for the balance of payments is *international transactions' reporting system* - ITRS and reports on loans granted to or received from nonresidents.

In accordance with the recommendations of IMF, this item comprises investment where direct investor owns 10 percent or more of ordinary shares or voting power. Equity shares are valued at book value according to the accounting standards. Reinvested earnings are included.

Claims on and liabilities to affiliated enterprises are included in direct investment-other capital item. Inter-company claims or liabilities between affiliated banks and affiliated financial intermediaries recorded under direct investment capital are limited to those associated with permanent debt (loan capital representing a permanent interest). Until 2000 all long term intercompany claims are liabilities between affiliated banks and affiliated financial intermediaries were included in this item (not only permanent debt).

Data on claims and liabilities of Slovene enterprises in indirectly affiliated enterprises from 1996 onwards are included in the item 'Direct investment abroad' (in case when enterprise abroad having Slovene direct investment holds 10% or more of equity in other foreign enterprise). In the item 'Direct investment in Slovenia' data on investment of foreign enterprises in indirectly affiliated enterprises in Slovenia are included (in case that Slovene enterprise with foreign direct investment holds 10% or more of equity in other Slovene enterprise).

Portfolio investment

Data on equity securities and other equity shares are also available from enterprises' surveys (form SN), but only data from surveys where direct investor owns less than 10 percent of ordinary shares or voting power, are included. (In the balance of payments, transactions with equity securities and other shares are collected from ITRS (see note to Tables 3.1. to 3.4. /Capital and financial account/Portfolio investment).

Data on residents' holdings of debt securities are available from direct reports from banks, and brokerage houses. For the balance of payments these data are collected from ITRS.

Liabilities of debt securities of government, banking and other sectors are available from credit registration from and Central Securities Clearing Corporation.

Trade credits and loans

Source for short-term trade credits are *reports of enterprises on stock of external claims and liabilities* (form SKV). (In the balance of payments the item short-term commercial credits is estimated.)

Sources for long-term trade credits and loans are credit registration forms and are the same for the international investment position and the balance of payments. Until 2000 the balance of payments did not distinguish loans between affiliated companies from loans between unaffiliated companies and included all loans in other investment items.

Currency & deposits, other assets, other liabilities and reserve assets

Sources of data for these items are banks' reports and Bank of Slovenia accounting data and are consistent with those for the balance of payments.

In the IIP arrears on loans and long term commercial credits are included in other claim/liabilities as short term item. Balance of payments does not include arrears.

The item "Assets / Currency and deposits of other sectors" in international investment position also includes data from the Bank for International Settlements (BIS) on deposits of Slovenian households in the banks in member states of BIS.

The item "Other liabilities of other sectors" in the IIP consists of the data on contractual joint ventures, which are not available for the balance of payments.

Table 3.7.: International Investment Position of Slovenia

IIP data do not include:

- data on real estate owned by Slovenian households abroad (mainly real estate in Croatia),
- claims on other countries on the territory of former SFR Yugoslavia, subject of negotiations on succession, expropriated assets in these territories and other assets transferred to the Slovenian government during the process of privatization.

Additional data on Direct Investment are available in a special publication of the Bank of Slovenia: 'Neposredne naložbe – Direct Investment' and on Bank of Slovenia Web site: <http://www.bsi.si/html/eng/publications/index.html>.

Gross External Debt (Tables 3.8 to 3.11)**General notes**

Methodology is based on External Debt Statistics: Guide for Compilers and Users, IMF, 2003.

The guide is available under the following web address:

<http://www.imf.org/external/pubs/ft/eds/Eng/Guide/index.htm>.

Revision policy

See revision policy notes for "Balance of Payments" (Tables 3.1. to 3.4.)

Data sources

Gross external debt consists of debt liabilities from the international investment position (IIP). Data sources for Tables 3.8 to 3.10 are the same as those for the international investment position excluding the data on direct investment.

Table 3.8 Net External Debt

The table presents gross external debt, gross external assets in debt instruments, and net debt position. The data are the same as presented in the international investment position (IIP). The net external debt position is equal to gross external debt deducted by gross external assets in debt instruments.

Table 3.9 Gross External Debt

Gross external debt, at any given time, is the outstanding amount of those current, and not contingent, liabilities that require payment(s) of principal and/or interest by the debtor at some point(s) in the future and are owed to non-residents by residents of an economy. The types of financial instruments included in the presentation of the gross external debt position are as follows: debt securities (money market instruments, bonds and notes), trade credits (short- and long-term), loans (short- and long-term), cash, deposits and other debt liabilities. Maturity for debt liabilities is based on the formal criterion of original Stocks as at 31 December 2002

** Data from Central Securities Clearing Corporation

Table 3.10 Debt – Service Payment Schedule

Service payments projected are estimates of payments due on existing debt outstanding and do not include interest rate changes.

Table 3.11 Debt indicators

Note 1: Short-term debt includes the value of short-term external debt outstanding (original maturity) and the value of long-term external debt outstanding (original maturity) due to be paid in one year or less.

International Liquidity (Table 3.12.)

Table 3.12.: International Liquidity

Foreign exchange reserves of the Bank of Slovenia and banks include foreign cash in convertible currencies, deposits abroad and first class securities of foreign issuers. Balances on fiduciary accounts are included in 'Other foreign assets'.

Foreign exchange reserves of banks are only part of item 'Foreign Assets' in Table 1.4. Foreign assets also include other foreign currencies, deposits abroad, foreign securities and other foreign assets, which do not have the nature of high liquid international funds.

4. GENERAL ECONOMIC INDICATORS

Table 4.1.: Derivation and Expenditure on Gross domestic product

Data for 1999 are partially estimated.

Table 4.2.: Quarterly real gross domestic product

1999 - 1994: constant prices 1992; reference year 2000;
1995 - 2000: constant prices 1995; reference year 2000;
2000 and following: constant prices 2000;

Table 4.3.: Industry

Data for production with breakdown by industries for years 1992 to 1993 and employment for years 1992 to 1995 are estimations based on methodologies used in those years.

Table 4.5.: Employment and unemployment

The majority of data for the period before 1997 are estimations based on methodologies used in those years.

Table 4.6.: Average wages

Real wages are deflated with consumer price index.

Table 4.7.: Registered households' income

Real aggregates are deflated with consumer prices index.

5. PUBLIC FINANCE

Table 5.1.: General Government Revenues and Expenditures

Note 1: The data of the current and previous year are revised monthly until the data on previous year became final.

Tables 5.2.: General Government Lending, Repayments and Financing

General Government Operations (Consolidated state budget, local governments, pension fund and health insurance fund).

Note 1: The data of the current and previous year are revised monthly until the data on previous year became final.

Tables 5.3.: Debt of Republic of Slovenia

Republic of Slovenia is defined as a legal person. The data from tables 5.1, 5.2. and 5.3. originate in the Bulletin on Government Finance, published by the Ministry of Finance.
