The slowdown in the eurozone economy that began in the second half of last year continued. Year-on-year growth in GDP in the eurozone has been falling gradually for one year, from 2.2% in the second quarter of last year to just 1.4% in the first quarter of this year. The Consensus forecast for economic growth in the eurozone over the whole year remains unchanged at 1.5%, while the OECD cut its forecast from 1.9% to 1.2%. The main reasons for the cut in the OECD forecast are the high oil price and the strong euro. Inflation in the eurozone in April remained at the annual level recorded in the previous two months, the rate being 2.1% for the third successive month. Inflation is rising in the USA, the year-on-year rate reaching 3.5% in April. The American central bank raised interest rates in May, while the ECB interest rate remains unchanged. In line with expectations the Fed raised its key interest rate by 0.25 percentage points to 3.0%, with analysts anticipating further rises. The ECB interest rate remains unchanged at 2.0%, but the slowdown in economic growth is giving rise to speculation about a cut.

Latvia, Malta and Cyprus entered the ERM II at the beginning of May, thus joining Estonia, Lithuania and Slovenia, who were the first of the new EU member-states to join one year ago. Participating in the system for two years is a pre-requisite for introducing the euro. None of the new EU member-states in the ERM II yet meets the price stability criterion, while Cyprus and Malta both fail to meet the two fiscal criteria for introducing the euro.

The slowdown in economic growth at the end of last year continued in the first quarter of this year. Real GDP growth amounted to 4.3% in the final quarter of last year, but just 2.6% year-on-year in the first quarter of this year. The Statistical Office of the Republic of Slovenia revised its industrial output figures for the beginning of the year significantly downwards. Industrial output in the first quarter was down 2.6% from the same period last year. In September the SORS will replace the current methodology for measuring industrial output based on physical indicators with figures on changes in sales revenues and changes in stocks. Minor revisions to the figures published for 2004 and 2005 are therefore also expected in the future. Business leaders were pessimistic in recent months, but consumer confidence has started to grow again.

Year-on-year growth in consumer prices fell in line with expectations to reach 2.2% in May. Consumer prices in May were up 0.3% from April. The largest rises were recorded by clothing and footwear (1.2%), recreation and culture (1.0%), and housing equipment (0.8%). Lower fuel prices reduced the total growth in prices by 0.1 percentage points. The twelve-monthly average harmonised consumer price index stood at 3.2% in May, 0.9 percentage points above the convergence criterion for April.

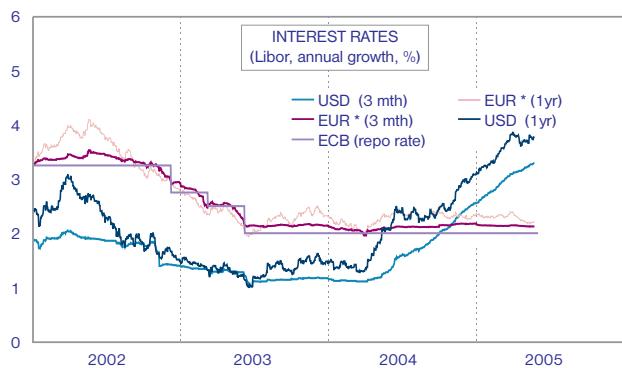

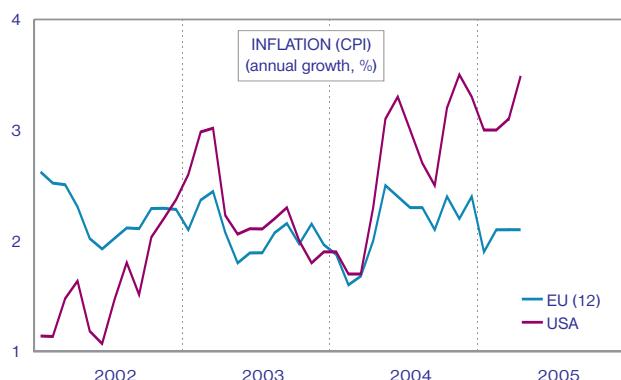

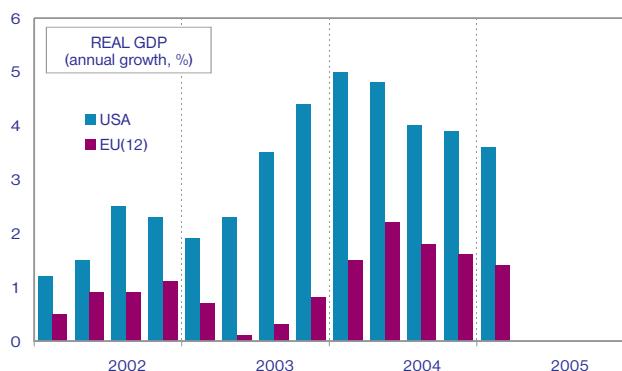

The current account remains balanced. In the first quarter there was a current account surplus of EUR 13 million, down EUR 21 million from the same period last year. With imports growing more slowly than exports, this year the trade surplus in the first quarter of this year doubled from the same period last year to reach EUR 80 million. Financial inflows are balanced with financial outflows. Loans from abroad remain prevalent among inflows, while portfolio investments abroad are prevalent among outflows. At EUR 7.5 billion foreign exchange reserves at the end of April were approximately at the level they were at last December.

Lending activities remains strong. Year-on-year growth in total lending continues to gradually strengthen, having risen from 19.5% last December to 23.4% this April. Foreign currency loans predominate, having accounted for three-quarters of the increase in lending in the first four months of the year. Growth in M1 is slowing, while growth in the broad monetary aggregates is gradually strengthening. Year-on-year growth in the monetary aggregates in April was 26.3% for M1, 7.5% for M2 and 8.2% for M3. Growth in short-term tolar time deposits is strengthening, while foreign currency deposits are declining.

Since the beginning of April the tolar has gradually appreciated against the euro. The average exchange rate on the foreign exchange market was SIT 239.73 to the euro in March, SIT 239.69 in April and SIT 239.61 in May. Since the end of April it has moved below the central rate, while the average deviation from the central rate was 0.01% in May. Average bank quotations are slightly lower.

A. MONETARY REVIEW

1. INTERNATIONAL ENVIRONMENT

Economic growth in the euro area was low in the first quarter of this year. The OECD strongly reduced its growth forecast in the euro area for this year. Initial estimates are that economic growth in the euro area amounted to 1.4% year-on-year in the first quarter, which points to a continuation of the cooling of the economy that began in the second half of last year. Quarterly growth improved to 0.5% (compared with 0.2% in the previous quarter). The Consensus forecast for year-end economic growth remains unchanged at 1.5%. By contrast the OECD reduced its economic growth forecast for this year in the euro area from 1.9% to 1.2%. It cited high oil prices and the strong euro as the main factors preventing higher growth.

Economic growth in the USA was revised upwards in the first quarter. Economic growth amounted to 3.7% year-on-year in the first quarter, or 3.5% over the quarter expressed as an annual rate (initial forecasts were 3.6% and 3.1%). Both figures are down in comparison with the figures for the final quarter of last year. The main factors in the decline in economic growth in the first quarter were the poor results in March, with no sign of a slowdown in the economy having been seen in January or February. Some figures for April show the economy to be strengthening again.

In May the Fed raised its interest rate, while the ECB left its interest rates unchanged. As expected the Fed raised its key central bank rate by 0.25 percentage points to 3.0%. Interest rates are expected to rise further in June and over the

rest of the year. The ECB has left its key rate unchanged at 2.0%, but there is already speculation on the market about a cut in interest rates because of slow economic growth.

April's inflation remained at the same level as in the previous two months in the eurozone, but rose in the USA. The year-on-year rate in the euro area stood at 3.2% in April, the third successive month at this level. The largest factor in year-on-year price growth was the rise in oil prices in comparison with the same period last year (which accounted for 0.4 percentage points of the year-on-year April inflation rate), while food and certain other products recorded slower growth than at the beginning of the year, leaving inflation unchanged. Inflation in the USA reached 3.5% year-on-year in April, with a monthly rate of 0.7% recorded. Inflation has thus been gradually rising since the beginning of the year. The largest factors in price growth are oil prices and food prices.

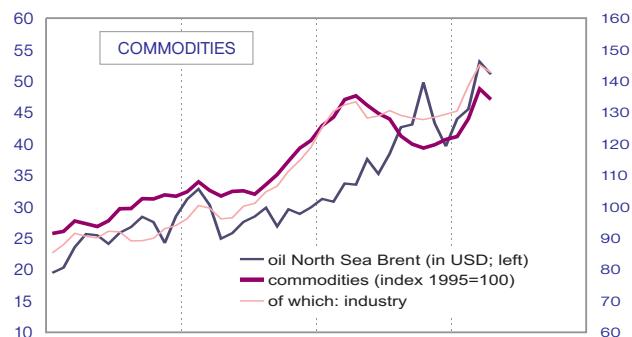

Latvia, Malta and Cyprus entered the ERM II at the beginning of May. The central rates set in negotiations were 0.702804 Latvian lats to the euro, 0.585274 Cypriot pounds to the euro, and 0.4293 Maltese pounds to the euro. The exchange rate is allowed to fluctuate 15% from the central rate. Participating in the ERM II for two years is a prerequisite for introducing the euro. The other conditions are price stability, the long-term interest rate level, the public finance situation and the adjustment of the legal system. Of these other conditions, Latvia currently has difficulties with high inflation, Malta fails to

meet the inflation and fiscal criteria, and Cyprus has difficulties with its public finances.

The French and the Dutch have rejected the European Constitution. The Labour party was again returned to power in the UK, while the governing coalition in Germany is in crisis. The French voted 55% against accepting the European constitution, but ratification will continue in the other EU countries. The main factors in the rejection were dissatisfaction with the situation at home, i.e. fears of unemployment, low economic growth and the unpopularity of the government. In the Netherlands 61.6% voted against the constitution. There was a general election in the United Kingdom in May, which saw the ruling Labour party returned to power despite a loss of popularity caused by its involvement in the war in Iraq. The regional elections in the province of North Rhine-Westphalia (with a population of 18 million) showed a strong decline in the popularity of the ruling coalition in Germany. The coalition then decided in favour of a vote of confidence and the calling of early elections this autumn (probably in September). The reasons that voters are deserting the government are low economic growth, high unemployment and the reforms aimed at cutting social benefits and other rights.

The oil price fell slightly in April. The average price for a barrel of Brent crude in April was USD 51, down slightly from the March figure of USD 53 per barrel. The fall in the oil price continued until the middle of May. In the second half of May it rose again when figures showing a decline in oil stocks in the USA were published. The fall in the oil price in the first half of May was linked to the strengthening of the dollar against the euro, the rise in oil stocks in the USA, lower demand from China and the USA, and high production by Opec members. Opec members are exceeding the official quota of oil production of 27.5

million barrels per day. In actuality they are pumping 30 million barrels per day, which is close to full output capacity. Judging by the statements by Opec representatives, the organisation will continue to pump oil at this rate (above the official quota), but is unlikely to raise the quota at its meeting on 15 June. The future oil price is expected to show greater reflection of demand in the USA, where the holiday season is about to commence (at the end of May), and with it an increase in driving.

2. REAL SECTOR

Economic Activity

The slowdown in economic growth that began at the end of last year continued in the first quarter of this year. With domestic spending relatively low, our assessment is that exports were the main engine of economic growth in the first quarter. With industrial output in the first quarter lower than in the same period last year, the favourable export developments can be assumed to have led to a contraction in the large stocks that have accumulated in the last two years. It is estimated that domestic spending in the first quarter grew slower than last year's average rate. The available figures indicate that the principal rise among the components of domestic spending was recorded by household spending, while investment activity was weaker. Although the figures are incomplete, it is estimated that GDP growth in the first quarter was lower than the figure of 4.3% recorded in the last quarter of 2004. The Statistical Office of the Republic of Slovenia is expected to publish its estimate of GDP growth for the first quarter in the middle of June.

The growth of industrial output was very slow in the first quarter. When publishing the final figures the SORS revised downwards its previous estimates of industrial output in January and February significantly. January's rise in industrial output was thus 3.7 percentage points lower than the previous figure, and February's was 4.1 percentage points lower. The final industrial output figures show negative growth, both in terms of the

monthly figure and the year-on-year figure. The largest negative growth rate was recorded in February, and while it eased slightly in March output was still down by more than 1% from February. The year-on-year rates of growth also point to a weakening of industrial output, with the average from the first three months of the year down 2.6% from the same period last year. In terms of the three-month average, output in mining was down 13.5% and manufacturing output was down 2.5%, while the only rise was recorded by the electricity, gas and water sector, with output up 0.3%. Within the manufacturing sector, only vehicle production recorded a significant rise in output (almost 20%) on average over the first three months of the year. The biggest contraction of approximately 18% was recorded by the leather industry, and by the highly export-oriented electrical equipment industry, which recorded the fastest average growth last year. In terms of the purpose of use, the largest decline in output of 3.3% was recorded by intermediate goods, while output of capital goods recorded the smallest decline of 0.9%. No figures are yet available on changes in stocks in the first quarter.

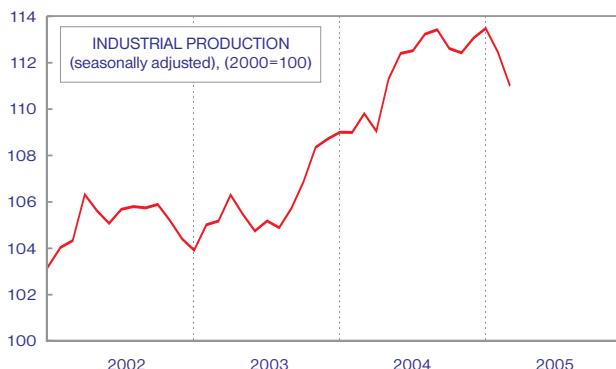

Indicators of activity in other sectors also point to a slight downturn in the economic activity. Although year-on-year rates of growth in retail revenues this year are behind last year's average, sales volume is still high. Activity in the construction sector fluctuated considerably at the beginning of the year, and

* in percentage points

Sources: Statistical Office of the Republic of Slovenia; Bank of Slovenia calculations.

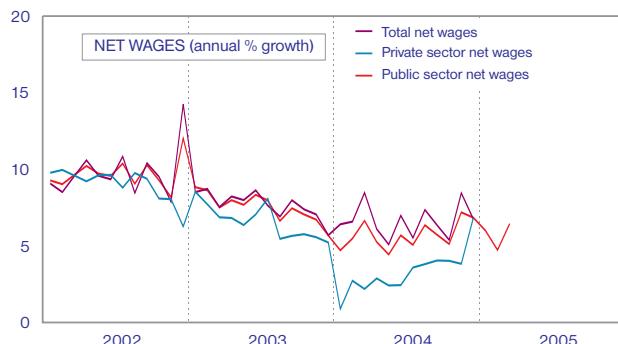

despite strong impetus provided by housebuilding in March, the real value of construction work carried out in the first quarter was lower than the average over the first quarter last year. At 1.7%, the average real rise in revenues in the catering and hospitality sector in the first two months of the year was at the same level as last year's average. After a relatively large fall in the number of overnight stays by tourists in April, the figure for the first four months of the year was down 1% year-on-year on average. There was a fall of 3% in the number of overnight stays by Slovenian tourists, while the number of overnight stays by foreign tourists was up 1%, despite a fall of 6% in numbers from Austria and 13% in those from Germany, thanks largely to a rise in of 24% in numbers from Italy and 39% in numbers from the UK.

Business sector showed some pessimism in April and May, but consumer confidence has started to grow again.

Comparing year-on-year, April's indicator of confidence in the manufacturing sector fell to the lowest level since the end of 2001, while confidence in May rose slightly, but remained worse than in the same month last year. The largest factor in the decline in confidence was the worsening assessment of current orders. Although the assessment of export orders also worsened, there was a significantly larger deterioration in the assessment of domestic orders. There was also a considerable deterioration in expectations regarding output in the next few months, although expectations regarding exports and total demand mostly remained unchanged. Despite a deterioration in employment expectations, consumer confidence strengthened, and this rise is coinciding with the return of rising confidence in the retail sector. After stalling slightly in the first few months of the year, it improved in both April and May in light of favourable growth in retail revenues.

The Labour Market

Growth in population receipts remains slow, with total wages being the fastest-growing component. Year-on-year growth in population receipts in the first quarter stood at 3.2%, or 0.5% in real terms, compared with the average growth recorded last year of 9.9%, or 6.3% in real terms. Here the lower growth primarily reflects a year-on-year decline of 8.5% in other employment receipts, and the slow growth in total social transfers, which averaged 2.3% year-on-year in the first three months of the year. The current rate of growth shows total population receipts to have stagnated at the beginning of the year primarily owing to negative growth in other employment receipts, while the current rate of growth in social transfers is rising and the current rate of growth in total wages is falling, having risen sharply at the end of last year.

Growth in average wages remains high. Year-on-year growth in monthly gross wages rose from 4.9% in February to 5.9% in March, which is equivalent to 2.7% year-on-year in real terms. Real growth averaged 3.0% in the first quarter of last year, but 2.1% in the first quarter of this year. Since January, the figures on wages have been gathered by the public records agency (the AJPES) and the SORS then processes them. Owing to a switchover in timeframe, it has not yet been possible to give detailed analysis of growth in wages in 2005 by individual sector. The SORS is expected to publish the figures for 2004 corresponding to the new methodology in June.

Labour costs: average gross wages (Statistical Office of the Republic of Slovenia) + other labour compensation (Agency for Public Related Records and Related Services)+other taxes (MoF).

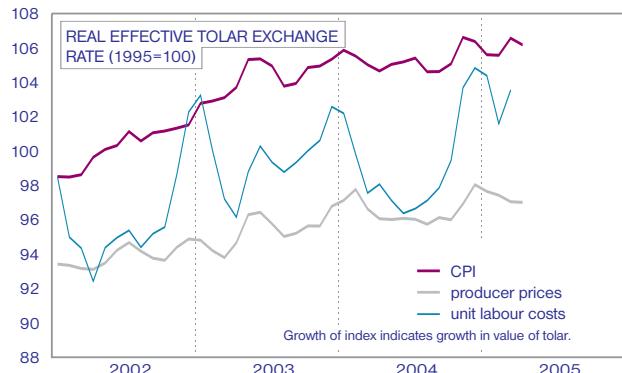

The employment trend was favourable at the beginning of the year. At 0.6%, year-on-year growth in the active population in March remained at a similar level to previous months. The good figures continue to primarily be the result of rising employment at companies and organisations, where the average number of employees rose by 1.2% over the first three months of the year. The largest contribution to the high employment growth was made by new jobs in the car industry, the rubber industry, the hotels and restaurants sector, and real estate services. Figures from the statistical register of active population show employment in the public sector to have continued growing at a year-on-year rate of 2% on average this year, with the largest rise coming in the health and social work sector. Employment also remains up year-on-year in the small business sector, where the number of employees recorded a year-on-year rise of 0.1% for the third successive month in March.

Unemployment fell again in March. Following the seasonal rise at the beginning of the year, primarily brought about by temporary employment contracts coming to an end, unemployment continued to fall in March. Here it should be emphasised that the rate at which unemployment was falling at the beginning of the year was slower than in the previous two years. Registered unemployment amounted to 10.2% in March, down 0.5 percentage points from the same month last year. The surveyed unemployment rate according to the ILO methodology stood at 6.9% in the first quarter, up 0.1 percentage points from the same period last year.

Competitiveness

The nominal effective value of the tolar against a basket of foreign currencies declined by 0.4% in April. With the nominal tolar exchange rate against the euro remaining virtually unchanged, the main factor in the decline in the tolar's value was the rise of 2.1% in the dollar and the rise of 1.3% in the pound sterling. The nominal tolar exchange rate was 0.7% stronger in comparison with last April. The main factors in the year-on-year rise in the nominal value of the tolar were the decline of 6.5% in the dollar and the tolar's gain of 2% against the pound sterling. By contrast the tolar depreciated against the euro by 0.7% and against the Swiss franc by 1.2% year-on-year. Although the tolar appreciated slightly against the euro in the first 12 days of May, it also lost 1.3% against the dollar over the same period. The nominal effective tolar exchange rate is therefore expected to depreciate again in May, at approximately half the rate recorded in April according to our forecasts.

The price competitiveness of the Slovenian economy improved at the beginning of the year. The improvement was primarily recorded by price competitiveness as measured by producer prices, while price competitiveness as measured by consumer prices recorded only a slight improvement from December. In comparison with December, competitiveness as measured by producer prices had improved by 1% by April, with the monthly dynamic of depreciation having almost ceased. Competitiveness as measured by consumer prices had improved by just 0.2% by April in comparison with the end of last year, primarily owing to high inflation in March. Although indicators of price competitiveness improved at the beginning of the year, the longer-term indicators point to a deterioration. In the year to April price competitiveness fell by 1.4% as measured by consumer prices, and by 1.0% as measured by producer prices. More than one-half of the deterioration in competitiveness in the two indicators was the result of the gain in the domestic currency as measured by the nominal effective tolar exchange rate. Despite the rapid rise in producer prices last year, it is also clear that domestic producer prices are adjusting more quickly to prices abroad than consumer prices.

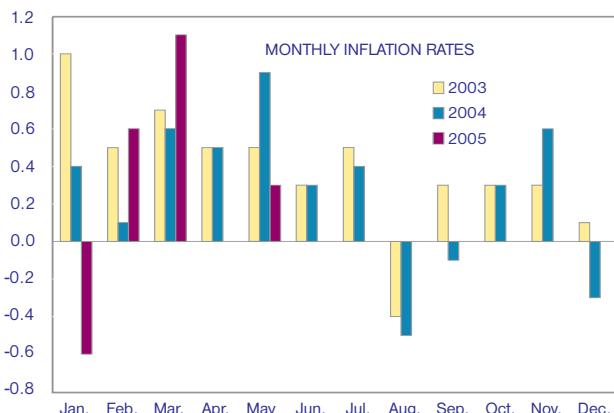

The forecast for long-term trends in competitiveness on the basis of labour costs is pointing to a rather worrying deterioration for the moment. Owing to methodological changes in monitoring labour costs and average wages in the first quarter of this year, price competitiveness as measured by

unit labour costs in manufacturing has been estimated on the basis of wage trends in the economy as a whole. Although the current rate of wage growth has slowed slightly following the rapid growth at the end of last year and has contributed towards a very slight deterioration in competitiveness in comparison with December, forecasts indicate that given the rapid fall in estimated productivity at the beginning of the year labour costs did probably not adjust to a sufficient degree. Therefore estimated unit labour costs grew at their fastest year-on-year rate since the middle of 1999, and were responsible for almost all of the year-on-year deterioration in competitiveness as measured by labour costs. The figures for various sectors show that average wages in manufacturing grew faster than wages in the economy as a whole in comparison with January. Owing to seasonal differences such a comparison is not entirely correct, but nevertheless this figure can be taken as indicating that the final adjusted figures will show the deterioration in competitiveness to be slightly larger than currently estimated. With the convergence of consumer prices and producer prices almost complete, appropriate adjustment of labour costs will have to become the most important factor in ensuring the competitiveness of the economy.

1) Effective exchange rate: basket of 7 currencies of Slovenia's main foreign trading partners (excluding Croatia), weighted by the shares in Slovenian goods trade. From January 2002 onward three currencies (EUR, USD, CHF) are used in the calculation. 2) Real exchange rate: SIT exchange rate divided by relative (domestic/foreign) price ratio.

3. PRICES

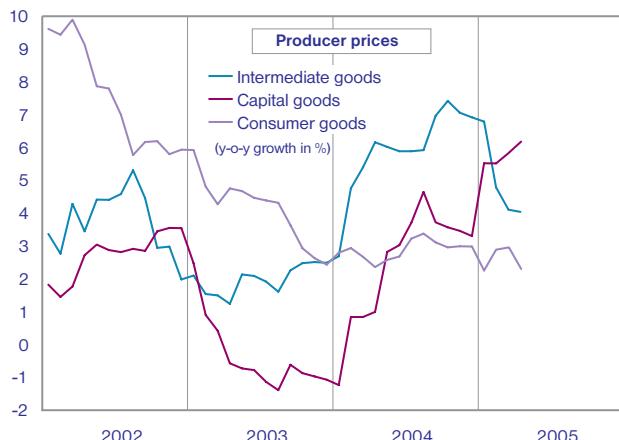

Consumer prices rose by 0.3% in May, with year-on-year growth falling again to 2.2%. The total growth in prices was stimulated by both more expensive goods and services. On average goods were 0.3% more expensive, and services 0.4% more expensive. The largest rises in prices of goods were recorded by clothing and footwear (1.2%), and seasonal food and beverages. Unlike previous months, prices of refined petroleum products fell on average, while cars continue to get cheaper. With the summer coming up, package holidays rose in price and were responsible for 0.1 percentage points of May's inflation rate. The movement in the price of package holidays during the summer months will be a major factor in the movement of inflation. In addition price rises were also recorded by catering and accommodation services (0.2%), housing services and passenger railway services (2.6%).

Despite sizeable fluctuations in inflation in recent months, the disinflation process remains sustained and in line with expectations this year. After temporarily rising to over 3.0% in March, the year-on-year inflation rate fell again in April and May. April's fall was primarily the result of the more restrictive administered prices policy for municipal services, and partly also of larger falls in the price of seasonal food (both fresh fruit and fresh vegetables). Similarly, May's fall in inflation

was primarily the result of changes in prices of refined petroleum products, which in contrast to the high growth recorded last May actually fell slightly from April. Because the effects of the seasonal movements that reduced inflation in the last two months are temporary, a gradual rise in year-on-year inflation to around 2.4% can be anticipated in the coming months.

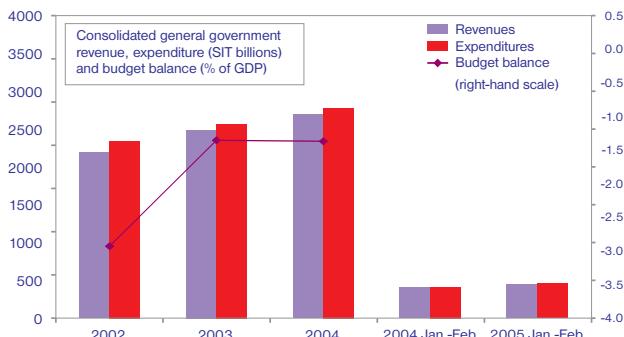

Growth in producer prices of manufactured goods is slowing in line with the movement in total industrial output. Year-on-year growth in producer prices of manufactured goods fell by more than 1 percentage point during the first four months of the year to reach 3.6% in April. Growth in prices of consumer goods remains slow at 2.3% and in line with the consumer price index. After high growth last year, growth in prices of intermediate goods almost halved during the first four months of this year. The largest factor in this was growth in fuel prices, which slowed to 0.7%, while growth in commodities prices remains approximately 5.7%. In contrast to consumer goods and intermediate goods, year-on-year growth in prices of capital goods is still rising, and reached 6.2% in April.

4. PUBLIC SECTOR

The government approved the revised budget for 2005, and it will be debated by the National Assembly in the middle of June. As proposed, the revised national budget for 2005 envisages a deficit in the amount of SIT 91.9 billion, equivalent to 1.4% of estimated GDP (compared with SIT 112 billion or 1.7% of GDP in the budget as it currently stands). The revision envisages an increase in revenues of SIT 64 billion (just under one-half from higher non-tax revenues, approximately one-third from higher tax revenues, and the remainder from inflows from the EU budget), and an increase in expenditures of SIT 44 billion from the current budget for 2005, which was adopted in December 2003. Transfers are prominent in the rise in expenditures. At the same time as adopting the revised national budget for 2005 the National Assembly will also debate the Act Amending the Republic of Slovenia Budget Implementation Act for 2004 and 2005 and the Pension and Disability Insurance Institute and Health Insurance Institute Debt Takeover Act, which entails the national budget absorbing approximately SIT 45 billion of debt.

The government issued bonds in the amount of SIT 250 billion in the first five months of the year, and made an early repayment of liabilities in the amount of SIT 63 billion. May saw the second issue of 5-year bonds and the fifth issue of 3-year bonds in a total amount of SIT 50 billion. As in previous months, the funds from the 3-year bonds were earmarked for the early repayment of national debt, thus reduc-

ing the debt servicing costs. The remaining revenue from the sale of the interest in NLB will be used for early repayment of debt at the beginning of June in the amount of 1.2% of GDP. Eurobonds in the amount of SIT 120 billion came due for payment at the end of May.

Revenues

Growth in revenues slowed in the first quarter to reach an estimated 2% in real terms. General government revenues recorded nominal growth of 11.4% in January and February, but grew significantly more slowly in March than last year. Provisional figures also show nominal growth to be slower in April. The main factors in this slowdown were revenues from VAT and non-tax revenues, which were unusually high last year because of one-off revenues.

Labour taxes grew by 2.4% in real terms in the first four months of the year. The trends within this group of taxes varied considerably. While revenues from personal income tax remained at approximately the same level as last year in real terms, payroll taxes rose by 2.2% and social security contributions rose by 3.6%. This was the result of movements in wages and changes in tax legislation.

Inflows from VAT were significantly lower in March and April than in the previous few months. Monthly revenues from VAT, which averaged almost SIT 60 billion between last November and this February, fell to approximately SIT 35 billion in March and April. Excise duties were up 7% in real terms in the first quarter from the same period last year. Excise duties

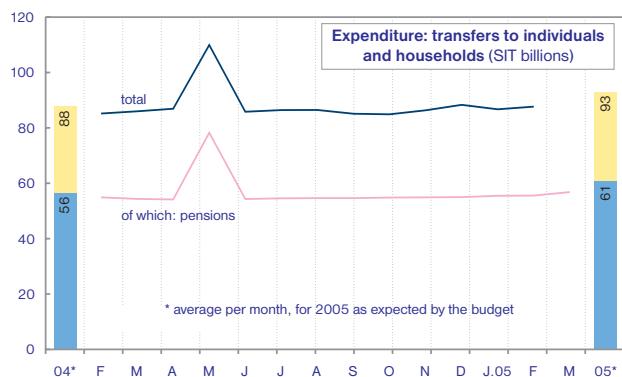

on tobacco and fossil fuels were higher. In May there were two rises in the latter, owing to rises in excise duties on refined petroleum products. Excise duties in the first five months of the year were higher than in the same period last year.

Corporate income tax is again the fastest-growing source of taxation revenue this year. Inflows in the first four months of this year were up almost one-third year-on-year.

Expenditures

General government expenditures recorded higher growth than revenues at the beginning of the year. They rose by 9.5% in real terms in January and February, but the rate of growth declined sharply in March and April according to provisional figures and estimates. The main factor in the rise were expenditure on subsidies, and high payments into the EU budget at the beginning of the year in particular (the payments not having begun until May last year).

Wage expenditures were up 2.2% in the first two months of the year, but there was no rise in expenditures on goods and services in real terms. A public sector wage increase of 2% in July was agreed upon in the public sector wage agreement for 2005. The remainder of the wage increase, which will be aimed at eliminating wage discrepancies, was agreed in the amount of 0.5%.

Current transfers grew significantly in January and February. Rapid growth was recorded by subsidies, with agricultural subsidies being paid out in January.

Transfers to households in the first two months of the year were up 1.8% in real terms on the same period last year.

The fastest rises were recorded by family benefits and parental benefit, while transfers for unemployment and ill pay recorded the lowest growth, having actually fallen in nominal terms in January and February from the same period last year.

Expenditure on pensions in the first four months of the year was up 1.3% in real terms from the same period last year. The rise reflects both an increase in the number of pensioners and the two pension increases made already this year. The number of pensioners was 1.3% higher in April year-on-year, with a 2.1% rise in the number of old age pensioners.

The government is drawing up changes in pensions and health system. The changes in the area of pensions will be aimed at more consistent coordination of pension rises with wage growth. While the current arrangements ensure that pensions rise more slowly than wages, thus reducing the cost of pensions as a proportion of GDP, the proposed changes move in the other direction. Furthermore the right to claim a widow's pension is being expanded and the pension increased, and the annual pension bonus is also being increased. The changes in the area of health are aimed at scaling back certain rights. Thus sick benefit charged to health insurance is being reduced. However the taxable base is to be expanded. Under the proposed changes in legislation, certain categories of people (the unemployed, those on the minimum wage) will no longer pay supplementary health insurance.

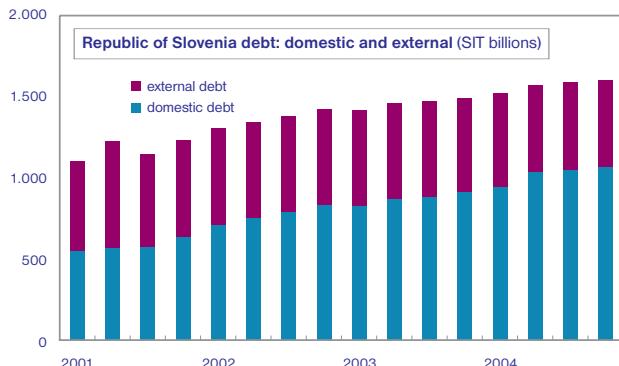

Public Debt and Guarantees

Public debt stood at 25.8% of GDP at the end of last year. The proportion of external debt fell by more than 5 percentage points last year. Eurobonds in the amount of SIT 120 billion came due for payment in May. This will see a continual fall of the total debt accounted for by external debt.

SIT billions	2002	2003	2004

Guaranteed external debt	182	257	350

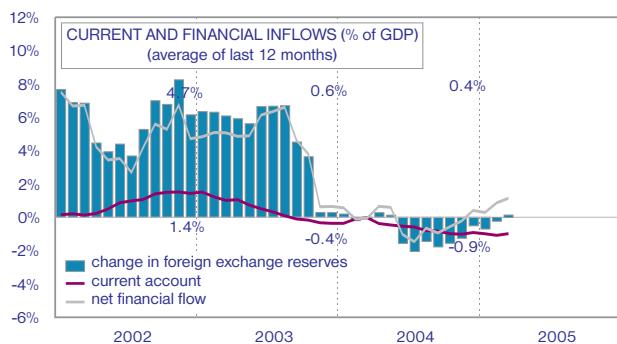

Source: Ministry of finance.

Public debt will increase owing to the takeover of the debt of the Pension and Disability Insurance Institute and the Health Insurance Institute. On 1 July (subject to parliamentary approval) the state will take over the debt of the pension and health treasuries in the amount of SIT 45 billion, or 0.7% of GDP.

5. BALANCE OF PAYMENTS

Current Account

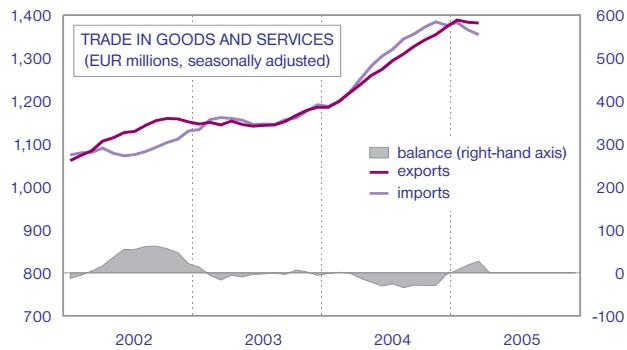

Despite a deficit in March, there was a surplus in the current account in the first quarter. The current account deficit in March amounted to EUR 32 million, more than EUR 25 million lower than in the same month last year. The current account surplus from the first two months of this year in the amount of EUR 45 million had shrunk to EUR 13 million by the end of March, just over one-third the level it was in the same period last year. The year-on-year decrease in the March current account deficit brought about an improvement in long-term results. For the first time this year the cumulative 12-monthly current account deficit fell by EUR 25 million to EUR 260 million, or 1% of estimated GDP. With net income unchanged, the smaller deficit in trade in goods and the larger surplus in services had a positive impact on the current account in the first quarter, while the rise in net transfers to the rest of the world had a negative impact.

The current rate of growth in exports of goods and services stagnated in the first quarter, while imports of goods and services even fell from the end of last year. Exports of goods and services in March were up 7.2% year-on-year at EUR 1,452 million, while imports were up 5% at EUR 1,442 million.

Exports of goods and services totalled EUR 3,904 million in the first quarter, up 10.2% from the same period last year, while imports were up 9.2% at EUR 3,825 million. With imports

growing more slowly than exports, this year the trade surplus doubled from last year to reach EUR 80 million.

The economic recovery in EU countries in the first half of last year and demand for Slovenian products from the former Yugoslavia and former Soviet Union benefited economic growth in Slovenia in 2004. Towards the end of last year and at the beginning of this year the most important international financial institutions revised their growth forecasts for the EU25 and the euro area this year downwards. These forecasts entail lower foreign demand for Slovenian products and a corresponding decline in economic growth. The forecasts have been realised in part in Slovenia, as evidenced by the figures showing a contraction of industrial output at the beginning of the year.

The May results of the business trends survey also point to a worsening in the economic climate. Export orders in May were down 5 percentage points from April, while demand for Slovenian exports fell by 9 percentage points. Longer-term comparisons also point to a deterioration. Export orders fell by 4 percentage points year-on-year, while export demand was down by one-half. Export orders over the first five months of the year were down only slightly year-on-year, but export demand was down by more than 2 percentage points. As expected,

the deterioration at large and medium-sized companies was less than at small companies. The question is the extent to which Slovenian companies will be able to compensate for the reduced demand from EU member-states with higher exports to non-members in the new circumstances following EU entry as they did successfully in the past.

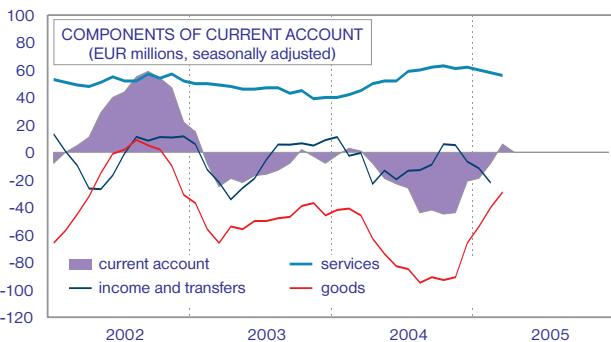

Year-on-year growth in imports and exports of goods was above-average in March, while growth in exports moved further ahead of growth in imports. Exports of goods were up 7.6% year-on-year at EUR 1,228 million, while imports were up 4.2% at EUR 1,305 million. Growth in exports was more than 3 percentage points behind the average for the first quarter, while growth in imports was just under 5 percentage points behind.

Trade with EU member-states was the main factor in the modest trade in goods in March. Exports were up 5.7% year-on-year at EUR 831 million, while imports were down just under 0.5% at EUR 1,037 million. After two months of stagnation, growth in exports to non-EU-members picked up in March. Exports were up 12% year-on-year at EUR 396 million, while imports were up 28% at EUR 268 million. There was a deficit in trade in goods of EUR 176 million in the first quarter, as a result of the deficit of EUR 456 million in trade with EU member-states and the surplus of EUR 280 million in trade with non-members.

In March the current rate of growth in exports of services stalled, while the current rate of growth in imports remained unchanged at more than 7% on an annual basis. Exports of services were up 7.4% year-on-year at EUR 594 million, while imports were up 7% at EUR 442 million. With exports recording a slightly higher year-on-year rate of growth than imports, the surplus in trade in services rose by EUR 12 million to EUR 152 million.

On the export side, the largest rise in the first quarter of more than 17% was recorded by exports of transport services. Revenues from maritime and road transport of goods

recorded an above-average rise, while the rise in revenues from railway freight and freight forwarding services was below average. Revenues from other business services amounted to EUR 72 million in the first quarter, down EUR 11 million from the same period last year, primarily owing to the cancellation of previously declared revenues from brokerage services in the amount of EUR 11 million. On the import side, various business and technical services rose by 23%, construction and assembly work rose by more than 37%, transport services recorded an below-average rise of 4.5%.

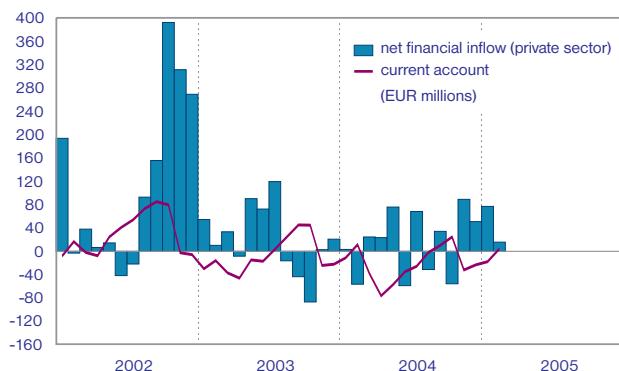

Tourism results improved in the first quarter. Tourism exports rose by more than 12% year-on-year to EUR 263 million, while imports rose by just under 1% to EUR 101 million. In line with these movements the surplus in tourism services rose by EUR 28 million to EUR 162 million. The fastest rises in tourism exports in the first quarter were recorded by sales of goods and services to non-residents in foreign currency (43%) and by healthcare services for tourists (32%). Revenues from the sale of goods at border shops and casinos also rose by more than 20%. Only revenues from education were lower in the first quarter than the same period last year, having fallen by more than one-fifth. The number of foreign tourists visiting was up 8% year-on-year in the first four months of the year, and the number of overnight stays was up 1%. Of the most important trading partners, the largest falls in the number of foreign tourists visiting Slovenia were recorded by Germany (9%) and Austria (4%), while the numbers from Italy rose by 25% and the numbers from

France by 10%. Like last year, tourism from the UK is expanding rapidly, with visitor numbers up 61% and overnight stays up 39%. The UK is now ranked fifth in terms of the number of tourists, behind Italy, Austria, Croatia and Germany.

Net labour and capital income recorded an outflow of EUR 48 million in March. Net outflows were up EUR 6 million year-on-year. With net labour income unchanged, the main factor in the rise in outflows was an increase of EUR 12 million in bank payments from investments in other forms of capital. Net income recorded an outflow of EUR 15 million in the first quarter of this year, the same as in the first quarter of last year. There was a net inflow of transfers for the first time this year in March, in the amount of EUR 5 million. Because of the size of the early payments into the EU budget in January and February, cumulative transfers in the first quarter still recorded a large outflow in the amount of EUR 52 million.

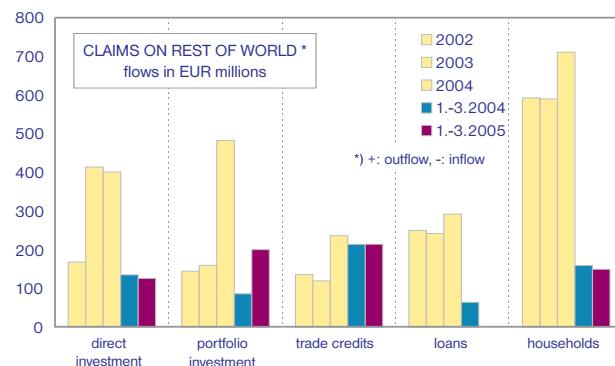

Financial Account

Financial inflows from the rest of the world were EUR 23 million in excess of outflows in March. The cumulative surplus in the first quarter was only marginally higher at EUR 26 million. Transactions with the rest of the world during this period contributed EUR 39 million to the rise in foreign exchange reserves, and EUR 900 million to the rise in external debt.

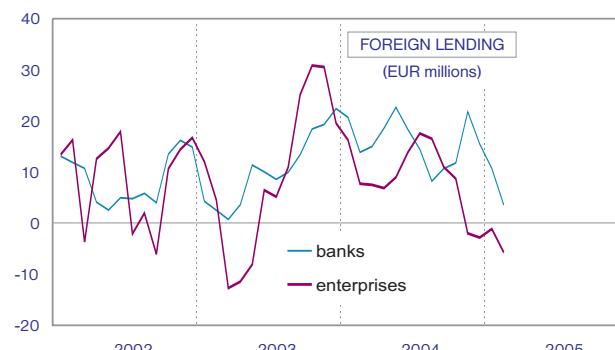

On the claims or financial outflows side, direct and portfolio investments and seasonally high trade credits granted abroad were prominent in March. All groups of investments with the exception of portfolio investments have this year recorded volumes equal to or lower than the volumes in the same period last year.

Direct investments abroad amounted to EUR 89 million in March. Slovenian investments abroad rose by a total of EUR 126 million in the first quarter. Investments in the other countries of the former Yugoslavia are again growing: they accounted for 70% of the investments made in the first quarter, with investments in the retail sector and the financial sector particularly prominent. The proportion of Slovenian investments made in the Czech Republic also rose notably from a bare 0.3% in the last two years to almost 9% in the first quarter of this year.

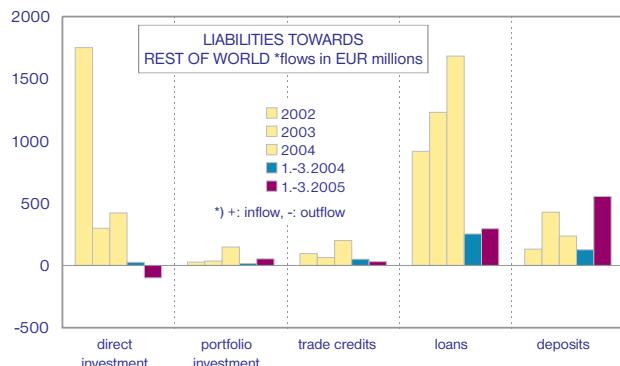

Portfolio investments abroad reached a new monthly record of EUR 160 million in March. The total in the first quarter was EUR 316 million, with the vast majority of banks' portfolio investments (EUR 116 million out of EUR 122 million) classed as foreign exchange reserves. The initial figures for April point to the growth trend stalling in that month, at least temporarily. Through net sales banks slightly reduced their portfolios of foreign securities, while other sectors strongly restricted net purchases in the month.

Trade credits granted abroad in the first quarter were the same as in the same period last year at EUR 214 million. There were trade credits of EUR 128 million granted to affiliates abroad (both to foreign investors and to companies with Slovenian equity), very similar to last year's figure of EUR 124 million. However, a change in the structure of the trade credits in terms of country or economic grouping is being seen. In comparison with 2003, when they accounted for 30.3% of the total, trade credits granted to other countries of the former Yugoslavia were down 1 percentage point a year later, and the figures for the first quarter indicate that the proportion is continuing to fall this year. There has been a sharp rise in the still low proportion accounted for by Efta countries, which stood at 3.9% in March, up more than 2 percentage points from the end of 2003.

In March the private sector received EUR 16 million from net repayments of financial loans. Banks approved EUR 16 million of lending abroad, while there were net repayments of EUR 32 million to companies. The private sector also recorded a net inflow of EUR 7 million in the first quarter from repayments of loans made abroad.

On the liabilities side, as in the previous month the financial inflows to the private sector in March primarily came from financial loans and a rise in bank deposits by non-residents. After two months of net withdrawal from Slovenian companies, non-residents' direct investments were again positive in March.

Non-residents' direct investments amounted to EUR 33 million in March.

Owing to the decline in January and February, the cumulative inflow of foreign investment in the first quarter was negative, an outflow of EUR 100 million being recorded. The initial figures for April do not forecast any substantial inflows in the month.

After four months during which non-residents' portfolio investments were relatively high, these fell in March to again reach single figures. Inflows totalled just EUR 9 million in March, although the total for the first quarter of EUR 53 million recorded very high year-on-year growth of 253%.

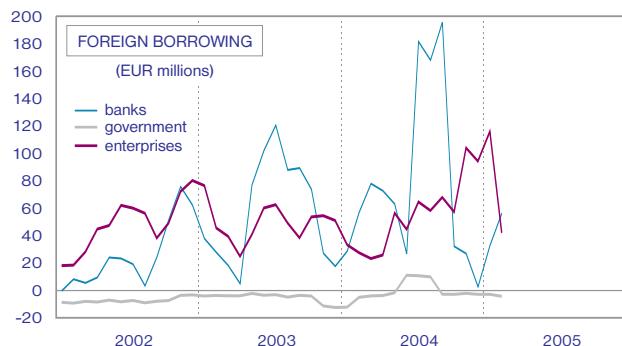

Only banks borrowed from abroad via financial loans in March, while companies made net repayments. Banks took a net sum of EUR 95 million, the highest since the extreme-

ly high sum recorded last August. Despite the recent growth, the quarterly inflow of foreign lending to banks was almost the same as the corresponding inflow in the first quarter of last year. Repayments of foreign loans by companies exceeded their borrowing by EUR 9 million. Although companies made net repayments in March, owing to the high inflow in February the quarterly net inflow was more than 50% higher than in the same period last year (EUR 128 million compared with EUR 83 million). The influence of weaker economic growth on borrowing by companies is also seen in the lower level of new lending at domestic banks in March and April. Here the proportion of foreign currency lending continues to rise, particularly for households loans. Initial figures show that companies continued to make net repayments in April, while banks took on a new, stronger wave of foreign loans.

The moderate surplus in the financial account and the slightly higher current account deficit reduced foreign exchange reserves by EUR 8 million in March. Total foreign exchange reserves stood at EUR 7,564.2 million at the end of the month. With both the current account and the financial account in surplus over the first quarter, there was a rise of EUR 39 million in foreign exchange reserves. Owing to the high level of short-term external debt, the indicator measuring sufficiency of foreign exchange reserves fell by a further 7.2 percentage points from February to 127.7%. Foreign exchange reserves fell by a further EUR 49 million in April.

External Debt

The rise in bank deposits by non-residents and, to a lesser extent, borrowing abroad increased the external debt by EUR 412 million in March. The gross external debt stood at EUR 16,313 million at the end of March, up EUR 916 million from the end of last year. This year the debt is growing faster than in the previous two years, with the rise in the first quarter almost reaching one-half of the rise recorded last year and the previous year (EUR 2.1 billion and EUR 1.9 billion). The source of the rapidly growing debt is different from previous years. Last year 71% of the rise in debt (EUR 1,488 million) was from long-term foreign loans, while this year they account for just 30%. The largest contribution to this year's rise in debt, some 38%, has been made by non-residents' short-term deposits at domestic banks (compared with 0% last year). The rise in short-term deposits is directly impacting on short-term debt, but unlike long-term foreign sources of financing it is subject to more rapid changes, and the high proportion of debt that it accounts for could also be merely temporary.

Short-term debt had risen to EUR 5,926 million by the end of March, up EUR 603 million from the end of last year.

The largest contribution to this segment of the debt, EUR 346 million, came from the rise in non-residents' short-term deposits

at banks, with the servicing of long-term debt making a lesser contribution: the amount of long-term debt principal falling due within one year rose by EUR 176 million.

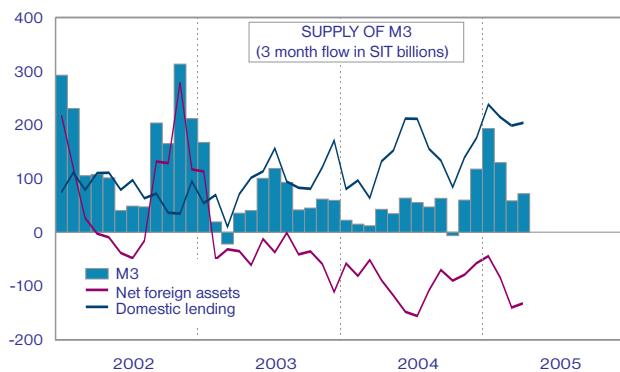

Gross claims against the rest of the world rose by less than the external debt in March, ending the month up EUR 156 million at EUR 12,935 million. The rise in claims from the end of last year was also less than the rise in debt, which saw the net external debt increase by EUR 374 million to EUR 2,378 million. External debt and external claims consist solely of debt instruments, for which reason they sometimes move in contrast to financial flows, because of the higher proportion of equity investments on the assets then on the liabilities sides.

6. MONEY AND CREDIT

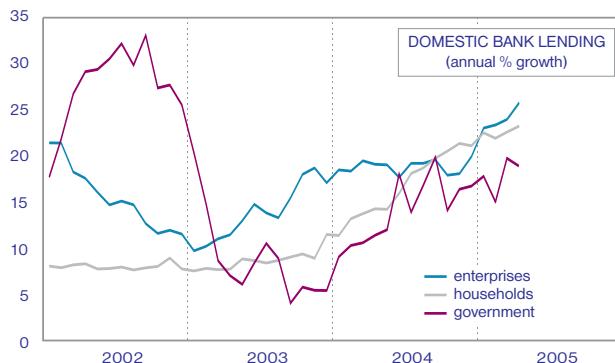

Growth in M3 has gradually strengthened in recent months thanks to the continuation of relatively strong lending activity and despite the rise in portfolio investments abroad. In the first four months of the year banks' domestic credits rose by SIT 323.9 billion (compared with SIT 165.8 billion last year), while net foreign assets (NFA), which shows the contribution made by balance of payments flows to growth in M3, fell by SIT 166.9 billion (compared with SIT 69.6 billion). The fall in NFA was to a great extent the result of the increase in portfolio investments abroad, which amounted to SIT 75 billion this year to March. Investments in mutual funds have slowed since March, amounting to just over SIT 2 billion per month between March and May, one-third of the monthly average last year.

Lending activity continues to strengthen gradually. Domestic bank lending amounted to SIT 211.6 billion in the final four months of last year, but SIT 323.9 billion in the first four months of this year. Lending to companies and monetary financial organisations rose by SIT 198.8 billion (compared with SIT 175.6 billion in the final four months of last year), household lending rose by SIT 53.0 billion (compared with SIT 49.7 billion) and general government lending rose by SIT 72.1 billion (compared with decrease of SIT 13.7 billion). Year-on-year growth in domestic lending continues to gradually strengthen, having risen from 19.5% last December to 23.4% this April. Provisional figures show lending to have remained relatively strong in May.

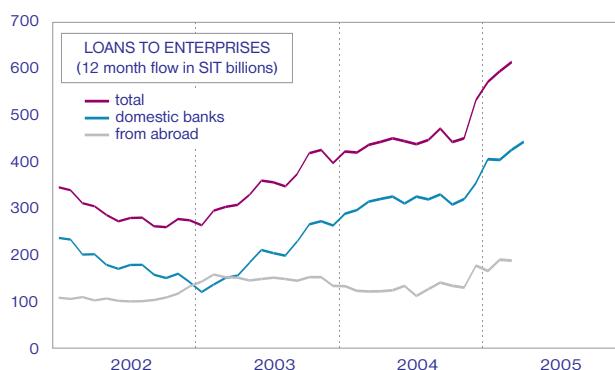

Foreign currency loans are prevalent in borrowing by non-bank sectors. Foreign currency loans accounted for approximately one-half of all lending in the final four months of last year, but about three-quarters in the first four months of this year. Companies continue to account for the majority of borrowing in foreign currency, with households accounting for less and the government making net repayments of foreign currency loans. The proportion of corporate lending in foreign currency is still rising (86.8% in the first four months of the year), while the proportion of household lending in foreign currency has remained at the level of approximately 40% seen at the end of last year. Year-on-year growth in foreign currency lending rose from 46.4% last December to 53.3% this April. This year to April non-

bank sectors had borrowed SIT 32.4 billion via short-term tolar loans and SIT 33.3 billion via long-term tolar loans. Year-on-year growth in long-term tolar loans fell from 13.7% in December to 13.5% in April, while year-on-year growth in short-term tolar loans rose from 5.1% to 7.1% over the same period.

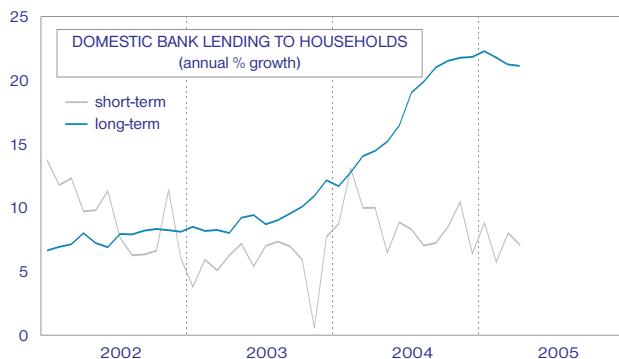

Total corporate lending remains at the level seen at the end of last year. The rise in total domestic and foreign lending to companies amounted to SIT 191.4 billion in the final quarter of 2004, and SIT 182.2 billion in the first quarter of this year. The relatively strong growth in domestic corporate lending continued in April, with lending rising by SIT 45.4 billion. Year-on-year growth in domestic corporate lending rose from 19.9% last December to 25.8% this April.

Companies made net repayments of loans abroad in March. The proportion of total loans accounted for by foreign loans stood at 39.1% in the final quarter of last year, but 25.5% in the first two months of this year. The proportion of total corporate borrowing accounted for by foreign lending has remained around one-third for close to two years now. After heavy borrowing abroad in February (SIT 31.2 billion), companies made a net repayment of foreign loans in March (of SIT 2.1 billion).

Household lending was seasonally low at the beginning of the year, but strengthened in March and April. The rise in household lending amounted to SIT 13.6 billion in January and February, but SIT 39.4 billion in March and April. This year to April foreign currency lending accounted for 40% of household lending, with the remainder being in the form of long-term tolar lending. Year-on-year growth in total household

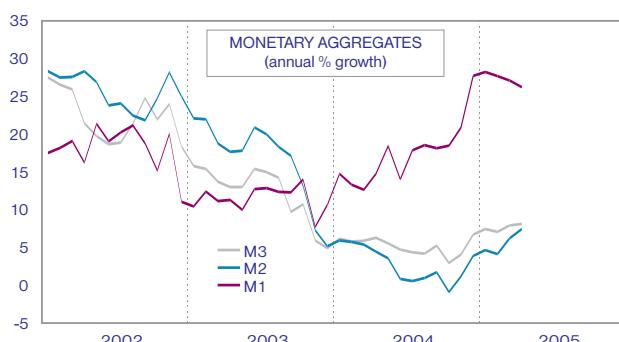

lending rose from 21.1% last December to 23.3% this April. The largest rise was recorded by foreign currency lending, which was up more than four times over one year, partly because of the low basis.

The government made net repayments in the final months of last year, but has been a net borrower this year. In the final four months of last year the government made net repayments of SIT 13.7 billion to banks, but borrowed SIT 71.2 billion net in the first four months of this year. This year the government has primarily borrowed from banks via securities issues, and to a lesser extent via loans.

Growth in M1 slowed in the first months of the year. This year to April M1 was up SIT 13.3 billion, with cash having risen by SIT 5.1 billion and demand deposits by SIT 8.1 billion. Year-on-year growth in M1 fell from 27.8% in December to 27.2% in March and 26.3% in April. This trend represents a normalisation after the strong growth in M1 at the end of last year, which was the result of seasonal factors (high spending) and relatively large households receipts, which in November and December exceeded the receipts in the same period the previous year by almost SIT 50 billion.

Growth in the broad money aggregates is gradually increasing. Year-on-year growth in M2 and M3 has risen since the final quarter of last year: the M2 rate rose from 4.0% in December to 7.5% in March while the M3 rate rose from 6.8% to 8.2%.

In recent months the rise in tolar time deposits has strengthened, while foreign currency deposits have declined. There was a rise of SIT 57.6 billion in tolar time deposits at banks in March and April, while foreign currency deposits fell

by SIT 5.2 billion. Year-on-year growth in tolar time deposits rose from -7.3% last December to -1.4% this April. Over the same period year-on-year growth in foreign currency deposits fell from 13.9% to 9.8%. The growth in tolar time deposits and decline in foreign currency deposits is probably the result of the stable exchange rate and expectations of a gradual rise in deposit rates.

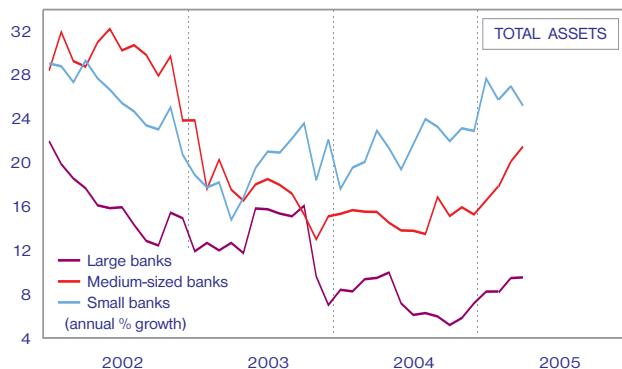

Of the components of tolar time deposits, it is those with a maturity period of one month to one year that are rising. In March and April tolar time deposits with a maturity period of one month to three months rose by SIT 30.7 billion, while those with a maturity period of three months to one year rose by SIT 20.8 billion. The rise in tolar time deposits with a maturity period of less than one month was significantly lower (SIT 6.6 billion), while long-term tolar deposits were unchanged during the period.

The average maturity period of tolar deposits remained unchanged. M1 fell as a proportion of M2 from 36.1% last December to 35.5% this April, while the proportion of M2 accounted for by long-term tolar time deposits fell from 11.2% to 10.6%.

7. BANKING

Year-on-year growth in the banking system's total assets stood at 15% in the last two months. Total assets had risen by SIT 355.4 billion to reach SIT 6,000 billion by the end of April. The major factor in the growth in total assets, which is 3.7 percentage points in excess of last year's average growth, was lending to non-bank sectors, which was up SIT 240 billion this year, of which corporate lending accounted for SIT 179 billion and household lending SIT 52.8 billion. The majority of the rise in total liabilities, some 58%, was the result of the rise in liabilities to foreign banks, with deposits by non-bank sectors accounting for just under one-third. The current rate of growth in total assets was 1.1% in April, down from the high rate of 2.4% recorded in March.

No group of banks stood out in particular in terms of the current rate of growth in April. Medium-sized banks recorded the highest growth of 1.4%, followed by small banks with 1.1% and large banks with 1.0%. The differences in the individual groups' year-on-year growth rates remain relatively large.

The market share of the largest banks in April showed no significant change from March. In the long term the market share of the largest banks is falling. The market share of the five largest banks (the CR5) in terms of total assets amounted to 64.2% in April. It has fallen by 2.8 percentage points in the last 12 months. In lending to non-bank sectors, where the five

largest banks account for 63.6% of all lending, there has been a decline of 3.3 percentage points over the same period, although the proportion remains practically unchanged this year. Corporate lending, where the proportion amounted to 64.0% in April, saw the largest decline in market share of 4.1 percentage points, with the decline this year amounting to 0.4 percentage points. The proportion of household lending accounted for by the five largest banks fell by 0.7 percentage points this year, and by 3.6 percentage points in the last year.

Lending to non-bank customers remains lively, in particular households. At just over SIT 55 billion net lending to non-bank sectors in April was considerably less than in March (SIT 80 billion), but still significantly more than the average last year (SIT 41.9 billion). Banks have directed the majority of this year's new lending to non-bank sectors (SIT 239.9 billion) to companies (SIT 179 billion) and households (SIT 52.8 billion). At SIT 23.9 billion April's rise in corporate lending was significantly less than in previous months, but year-on-year growth remains at a level close to 24%. Household lending remains very high. At SIT 17 billion, net household lending in April was strongly in excess of last year's monthly average of SIT 11.3 billion. In contrast to the previous months when the government made net loan repayments to banks, banks increased their lending to the government by SIT 10 billion. Year-on-year growth in lending to non-bank sectors remains high. Year-on-year growth in lending to non-bank sectors as a whole stood at 22.5% in April, with corporate lending recording a rate of 24% and household lending 23.4%. The current rate of growth in personal lending remains lively, with the rise in household lending particularly strong in March and April.

Foreign currency lending is prevalent among lending to non-bank sectors. Foreign currency lending accounted for three-quarters of net lending to non-bank sectors this year to April. Companies made net tolar loan repayments in April, and took out SIT 25.4 billion of foreign currency loans with banks. This year foreign currency loans account for 85% of net corporate lending by domestic banks. Personal foreign currency lending is also strengthening, with foreign currency accounting for 40% of total net household lending this year.

The dominance of foreign currency lending is bringing about a change in the proportion of foreign currency lending in the total loan stock. The proportion of lending to non-bank sectors accounted for by foreign currency lending in the year to the end of April rose by 6.6 percentage points to 37.2%, with the proportion of corporate lending in foreign currency rising by 7.6 percentage points to 48.4% and the proportion of household lending in foreign currency by 4 percentage points to 5.4%. Banks cut all forms of investment in securities in April, with largest cut being recorded by Bank of Slovenia securities (SIT 41.6 billion), while investments in government securities were down SIT 7.9 billion and investments in other securities were down SIT 8.4 billion.

Year-on-year growth in deposits by non-bank sectors remains weak, at 7 percentage points behind growth in total assets, while banks are continuing to compensate for the deficit in financing from deposits by borrowing from banks abroad. At SIT 18.3 billion financing via foreign banks in April was significantly higher than in February and March. The main contribution to the increase in non-bank sectors' deposits of SIT 23.9 billion was made by government deposits in the amount of SIT 18.5 billion, with the increase in household deposits a modest SIT 6.8 billion. The rapid rise in liabilities to foreign banks of close to 50% year-on-year is causing a rise in the proportion of banks' total liabilities that they account for and a fall in the proportion accounted for by deposits by non-bank sectors. The proportion accounted for by the former rose by 4.6 percentage points in the last year to 19.8%, while the proportion of the latter fell by 3.9 percentage points to 60.6%. The increase in household deposits has been very modest this year, with a rise of just SIT 7.4 billion being recorded by the end of April. The currency structure of deposits by non-bank sectors remains similar to that in previous months: foreign currency deposits account for 34%, and tolar deposits 66%. The maturity structure also remains similar to that in previous months, with demand deposits accounting for 35%, short-term deposits for approximately 58%, and long-term deposits for 7%.

Net interest income in the first four months of the year exceeded that in the same period last year. Net interest income continues to record positive growth, while net non-interest income was lower than in the same period

last year owing to a decline in net financial transactions (-39.4% year-on-year). At 7.9%, growth in net fees and commissions, the most important category of non-interest income, was modest but comparable to growth in total assets. The rise in gross income was therefore primarily the result of growth in net interest income.

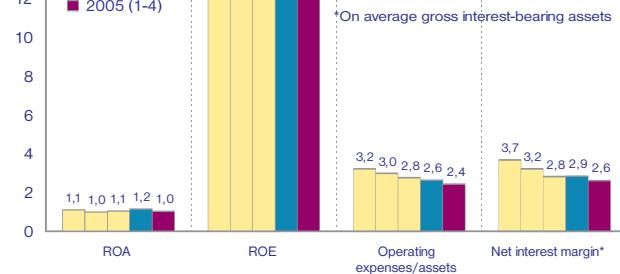

Growth in operating costs remains moderate, while costs of provisions are slightly behind those recorded last year.

With regard to the distribution of banks' gross income, growth in operating costs remains moderate at 4.5%, while within these growth in labour costs is slightly higher at 5.9%. Costs of provisions are slightly lower than those recorded in the same period last year. With non-interest income low and moderate growth in net interest income, this is allowing banks to generate profits similar to those recorded in the same period last year.

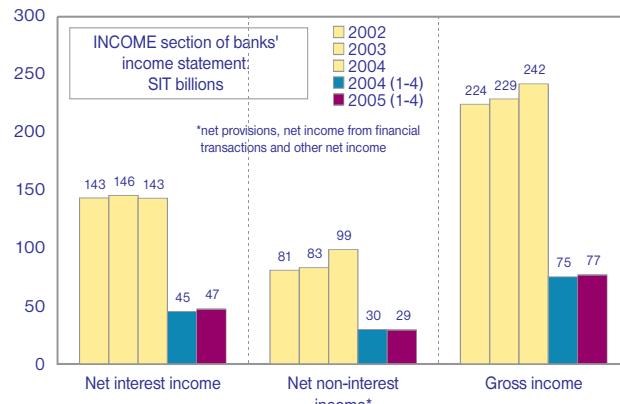

Banks' margins continue to show a mild falling trend. The interest margin on interest-bearing assets amounted to 2.6% in the first four months of the year, down 0.3 percentage points from the same period last year. The interest margin calculated for the last twelve months as a proportion of total assets is still showing a falling trend, with a figure of 2.6% being recorded in April. The non-interest margin remained below 1.8% for the second successive month, while the overall financial intermediation margin was below 4.4%.

Banks generated pre-tax profit of SIT 19.6 billion in the first four months of 2005, similar to the same period last year. ROA was down 0.2 percentage points this year at 1.0%, while ROE was down 1.1 percentage points at 13.5% at the end of April. With non-interest income down, the proportion

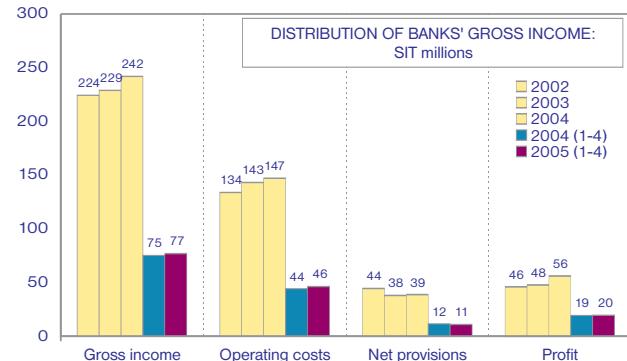

BANKING PERFORMANCE INDICATORS (%)
*On average gross interest-bearing assets

INCOME section of banks' income statement: SIT billions
*net provisions, net income from financial transactions and other net income

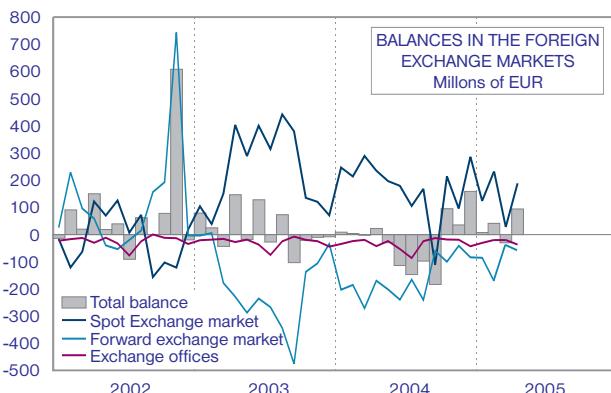

of banks' gross income accounted for by net interest rose by 1.4 percentage points to 61.7%. Operating costs rose as a proportion of bank's gross income, owing to a decline in costs of provisions. The coverage of operating costs with non-interest income was down 3.8 percentage points to 63.6% at the end of April. With total assets growing faster than operating costs, operating costs continue to fall as a proportion of total assets, the figure reaching 2.4% in April.

B. MONETARY POLICY

1. EXCHANGE RATE

This year, with the exception of March, excess supply of foreign exchange has been prevalent on the foreign exchange markets. In April the excess supply of foreign exchange on the market amounted to EUR 94 million, the highest in an individual month this year. The cumulative excess supply of foreign exchange in the first four months of the year thus rose to EUR 112 million, three times more than that recorded in the same period last year. Despite the excess supply of foreign exchange, foreign exchange reserves fell by EUR 49 million in April, having risen by EUR 38 million this year to April.

The excess supply of foreign exchange on the spot market strengthened in April. The total of EUR 189 million was just under one-half more than the average in the first quarter, but just under one-quarter less than the average in the first four months of last year. The largest net suppliers of foreign exchange were non-residents (EUR 89 million) and companies (EUR 73 million). At EUR 27 million the net supply of foreign exchange from private individuals was extremely high in April, and was just EUR 4 million less than during the whole of 2004. Provisional figures show the trend of rising excess supply of foreign exchange on the spot foreign exchange market to have continued in May. At EUR 37 million the net demand for foreign currency cash at exchange offices was down EUR 6 million from last April.

Net sales of foreign exchange on the forward market were modest in March and April, reaching just under one-third of last year's monthly average. The figures were EUR 38 million for March and EUR 57 million for April. Banks made forward sales of EUR 57.5 million of foreign exchange to non-residents, and net purchases of EUR 0.2 million from domestic companies. According to provisional figures forward sales strengthened to EUR 173 million in May.

Transactions between banks and non-bank sectors at the beginning of the year are increasing the potential supply of foreign exchange on the market. In April the potential

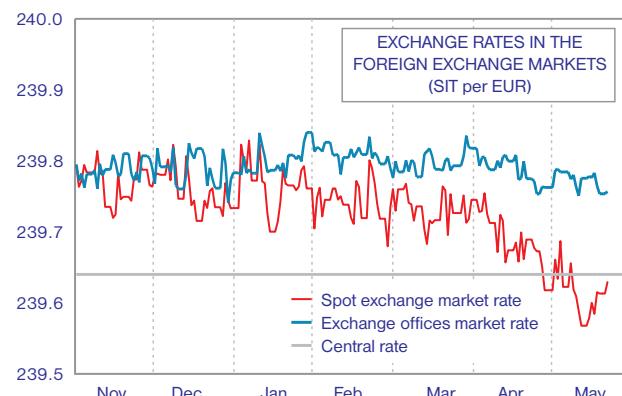

supply of foreign exchange on the market increased by EUR 235 million. It totalled EUR 686 million in the first four months of the year, just 5% less than the total potential supply in the whole of 2004. Banks' foreign currency liabilities rose by EUR 101 million this year to April, and their foreign currency claims by EUR 787 million.

USD	-14.7	-7.2	-6.5	2.1	3.3
Basket 1)	-0.8	-0.2	-0.7	0.4	0.6

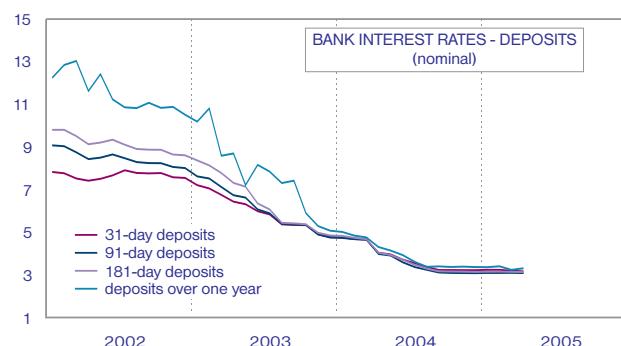

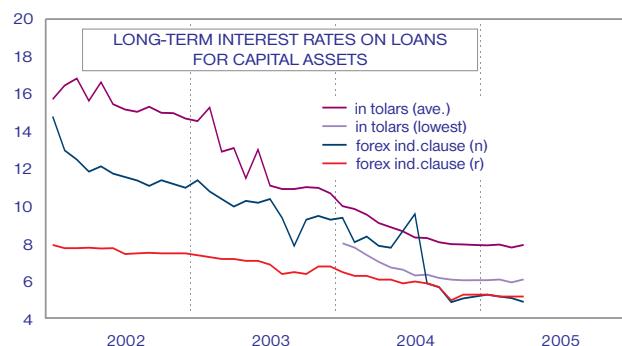

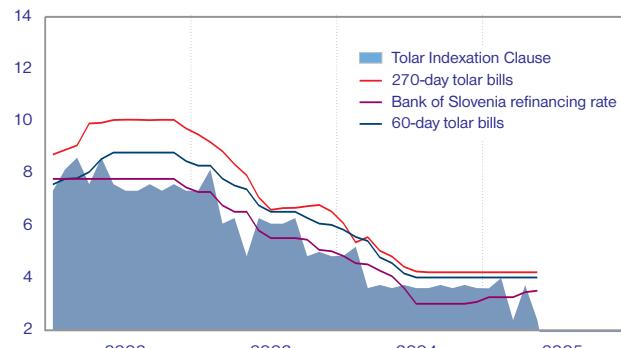

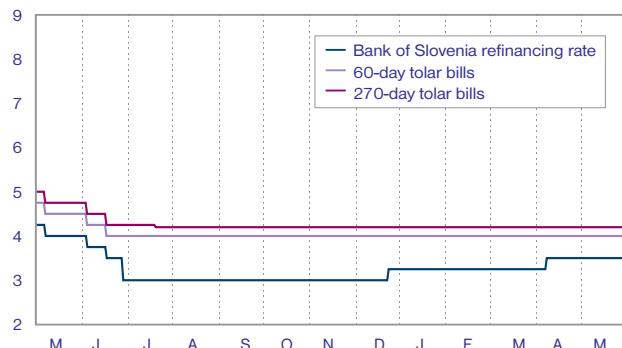

1) Basket/effective exchange rate: basket of 7 currencies of Slovenia's main foreign trade partners (excluding Croatia), weighted by shares in Slovenian goods trade. From January 2002 onwards three currencies are taken into account (EUR, USD, CHF). Sources: BoS, Statistical Office of the Republic of Slovenia and various foreign sources.

Transactions between banks and the Bank of Slovenia in April increased the potential supply of foreign exchange on the market. In April banks reduced the balance of foreign exchange swaps by EUR 217 million, and the balance of foreign currency bills by EUR 88 million. Through the final purchase of foreign exchange from banks the Bank of Slovenia reduced the potential supply of foreign exchange on the market by EUR 295 million. The net increase in the potential supply of foreign exchange from transactions between banks and the Bank of Slovenia was just EUR 10 million.

The tolar appreciated in nominal terms against the euro under the influence of the excess supply of foreign exchange. The tolar averaged 239.69 against the euro in April, but the May exchange rate fell by 8 stotins to SIT 239.61 to the euro, 0.01% below the central exchange rate.

2. INTEREST RATES

The Bank of Slovenia finally made a change to the interest rates of its instruments on 8 April this year. It raised the forward foreign exchange swap rate to 1.5% and the refinancing rate to 3.5%, the rise in both cases being 0.25 percentage points. The Bank of Slovenia's other tolar interest rates have remained unchanged since Slovenia joined the ERM II.

There was no significant change in the interest rate on the interbank market in April. It averaged 3.76%, just 0.01 percentage points up from the previous two months. The interbank interest rate has been at this mark since last September, having temporarily fallen to 3.38% towards the end of last year before returning to its previous level over the next two months. The overnight placements interest rate (Sionia) averaged 3.75%, the same as in March.

Neither was there any significant change in banks' declared tolar interest rates in April. With the Sitibor interest rates having fallen a fraction for the shortest maturity periods in March, in April they rose again slightly. For longer maturity periods these interest rates were unchanged for the fifth successive month.

The interest rates on 1-month and 6-month treasury bills fell in April, while those on 3-month treasury bills rose. At the 1-month treasury bill auctions the interest rate first fell to 3.64% at the beginning of the month, then rose to 3.89% in the second auction, before falling to 3.64% at the final April auction, down 0.03 percentage points from the end of March. The excess demand was 1.7 to 1.8 times the supply, with the

exception of the second auction, when it fell to 1.1 times the supply. At the first three auctions in May the excess demand strengthened to between 1.7 and 2 times the supply, with the interest rates down slightly from April. With excess demand down, the interest rates at auctions of 3-month treasury bills rose to 3.68% in April and 3.75% in May. The April auction of 6-month treasury bills saw excess demand rise (1.8 times the supply) and the interest rate fall to 3.69%. With excess demand up (2.2 times the supply), the interest rate at the May auction of 12-month treasury bills remained unchanged at 3.7%.

On 12 May the government released the fifth issue of 3-year RS58 bonds in the amount of SIT 12 billion and the second issue of 5-year RS60 bonds in the amount of SIT 38 billion. The average annual yields for all the accepted purchase bids was 3.792% for the 3-year bonds, and 3.813% for the 5-year bonds

There was a minor change in banks' tolar interest rates, but only the lending rates. In May the declared interest rates on corporate loans and household consumer loans were cut further. This took the cut in interest rates on these types of loan to between 0.3 and 0.4 percentage points since last September. In contrast, declared nominal interest rates on housing loans were raised by 0.05 percentage points in May, leaving them up 0.1 percentage points from September. There was no change in deposit rates in May.

Interest rates on new bank loans remain mostly unchanged. According to the figures to April, there was slight

movement in less common methods of charging interest (also owing to changes in the methods used at individual banks), while most interest rates remain reasonably stable.

IV. NOTES ON METHODOLOGY

General Notes

Sectors

External sector consists of non-residents.

Residents of the Republic of Slovenia are defined as:

- companies and other legal entities with a registered office in the Republic of Slovenia, except their branches abroad;
- branches of foreign companies entered in the Companies Register of the Republic of Slovenia;
- sole proprietors or natural persons, independently performing business activities as their prime occupation, with a registered office in the Republic of Slovenia or having permanent residence in the Republic of Slovenia;
- natural persons with permanent residence in the Republic of Slovenia;
- natural persons temporarily residing in the Republic of Slovenia holding a residential or working visa valid for no less than six months;
- diplomatic, consular and other representative offices of the Republic of Slovenia abroad financed from the Budget as well as Slovene citizens employed at these representative offices and their family members.

All other persons and entities shall be deemed non-residents.

Domestic sector is broken down to monetary and non-monetary sector.

Monetary sector consists of the Bank of Slovenia and commercial banks. Commercial banks (hereinafter "banks") are deposit money banks that accept sight deposits and have banking licenses granted by the Bank of Slovenia. Only domestic banks, owned by residents or non-residents, are included.

Non-monetary Sector is further divided into following sub-sectors: Non-monetary financial institutions, General Government, Individuals, Enterprises and Non-profit institutions.

Non-monetary financial institutions include Savings banks, Co-operatives and other financial institutions.

General Government comprises Central Government and Other General Government. **Central Government** mainly consists of the Budget. **Other General Government** contains local communities and entities established by General Government - institutions, funds, companies, clubs and other societies engaged in education, health, culture, social insurance, trade unions and other organizations.

Households (Individuals) include resident individuals.

Enterprises comprise firms in private or public ownership or control, except for those included in the General Government.

Non-profit institutions consist of all entities, not included in any other sector.

Characteristics of the data

Data present stocks on assets and liabilities at the end of the period.

Data on stocks nominated in foreign currencies are converted into Tolars using Bank of Slovenia end of period middle exchange rate.

Data in tables are not seasonally adjusted.

Table: Republic of Slovenia: general information

Table shows basic general data on Slovenia and its economy. In the "latest actual" column the latest available data for the current year are published. Data sources for the table are Bank of Slovenia, Ministry of Finance and The Statistical Office of the Republic of Slovenia.

1. MONEY AND BANKS

Last published data are preliminary.

Sectorization of banks' data as from April 30, 1999

For data from April 30, 1999 on a sectorization has been implemented according to ***Regulation on Introduction and Implementation of Standard Classification of Institutional Sectors***, (hereinafter "SKIS") - Official Gazette 56/98. SKIS which implemented a national standard for economic sectorization is based on European System of Accounts 95 and is in accordance with System of National Accounts 93.

According to SKIS the sectors of the economy are: 1.) Non-financial corporations, 2.) Financial corporations (central bank, commercial banks, other financial institutions), 3.) General government, 4.) Households, 5.) Non-profit institutions serving households and 6.) External Sector (non-residents). There has been no change regarding definition of *Non-resident*.

Domestic sector is broken down to monetary sector and non-monetary sectors.

Monetary sector consists of the Bank of Slovenia and commercial banks. Commercial banks (hereinafter "banks") are deposit money banks that accept sight deposits and have banking licenses granted by the Bank of Slovenia. Domestic banks, owned by residents or non-residents, are included.

Non-monetary Sectors are: Non-financial corporations, Non-monetary financial institutions, General government, Households, Non-profit institutions serving households.

Non-financial corporations are legal persons - market producers of goods and non-financial services.

Non-monetary financial institutions consist of Savings banks, Co-operatives and *Other financial institutions*. *Other financial institutions* are: 1. Other financial intermediaries, except insurance corporations and pension funds (mutual funds, investment funds and financial leasing comp.), 2. Financial auxiliaries (securities brokers, stock exchanges) and 3. Insurance corporations and pension funds.

General government consists of: 1. Central government (administrative departments of state and central government agencies), 2. Local government (local administration, local agencies) and 3. Social security funds.

Households: resident individuals as consumers and resident individuals as sole proprietorships and partnerships being market producers and having no independent legal status. The data of the latter have been prior to April 30, 1999 included in the sector Enterprises.

Non-profit institutions serving households are clubs, political parties, trade unions, churches or religious societies, humanitarian and charity organizations, professional societies.

Table 1.1.: Monetary Aggregates

Table 1.1 shows stock data at the end of month for base money, monetary aggregates M1, M2 and M3, calculated according to the national definition and according to the harmonised definition of the European Central Bank (hereinafter: ECB).

The definition of base money is define as the sum of: *Banknotes in circulation, Banks' settlement accounts, Overnight deposit and Other deposits at the Bank of Slovenia* (Savings banks' settlement accounts, Savings banks' and Savings and loan undertakings' reserve accounts, transactional accounts of the Central and Local Government).

Data sources are banks' and Bank of Slovenia's bookeeping data, which refer to the end of the month.

Calculation of monetary aggregates according to the national definition is shown on the liabilities' side of Table 1.2: Monetary Survey – Consolidated Balance Sheet of the Monetary System (See methodological notes referring to Table 1.2).

Harmonised monetary aggregates for Slovenia are calculated according to ECB's definition of harmonised monetary aggregates of euro area, which is evident from documents published on web pages of the ECB (<http://www.ecb.int>). Main differences between the two definitions of monetary aggregates are as follows:

- limited maturity of items included (harmonised aggregates include liabilities of up to 2 years only),
- equal treatment of the foreign exchange liabilities (which are, in harmonised aggregates, included into adequate items together with those in domestic currency),
- status of the monetary neutral sector (the central government in the harmonised aggregates has the status of a monetary neutral sector) and
- inclusion of the money market fund shares / units into M3.

Composition of harmonised monetary aggregates, as defined by the ECB is:

- HM1 contains *currency in circulation and overnight (sight) deposits*.
- HM2 includes beside HM1 also *deposits with agreed maturity of up to 2 years and deposits redeemable at notice of up to 3 months*.
- HM3 includes HM2, *repurchase agreements and debt securities with a maturity of up to 2 years*. *Money market fund shares / units* financial instrument, which is according to ECB's definition also part of HM3, will be included in calculation when such institutions appear in Slovenia.

HM2 and HM3 are, for the period prior to July 2002, partly calculated as estimation, because of the unavailability of relevant bookkeeping breakdowns.

Table 1.2.: Monetary Survey - Consolidated Balance Sheet of the Monetary System

Table 1.2 shows consolidated balance sheet of all banks' and Bank of Slovenia at the end of the month. Data for banks are aggregated.

Domestic assets consist of banks' and Bank of Slovenia's claims on General Government arising from succession to the former SFR Yugoslavia and the bank rehabilitation program, and claims from loans and securities on other non-monetary sectors. Claims from succession and the bank rehabilitation program represent: claims of the Bank of Slovenia on the Succession Fund of the Republic of Slovenia (on account of the former National Bank of Yugoslavia Dinar cash), counterpart claims for Bank of Slovenia liabilities to the International Monetary Fund, government guaranteed bank rehabilitation bonds, government bonds for unpaid foreign currency deposits and claims on the former National Bank of Yugoslavia for foreign currency deposits.

Other assets include fixed assets of banks and of the Bank of Slovenia and some other items (doubtful claims, etc.).

In September 2003, the liability part of the Table changed due to methodological changes in the calculation of monetary aggregates under the national definition, because of gradual harmonisation with the definitions of the European Central Bank (changes were made to all time series).

To aggregate M1, a vista Savings deposits at banks were added, and therefore, it consists of currency in circulation and demand deposits at banks (including a vista Savings deposits) as well as at the Bank of Slovenia.

To aggregate M2, Tolar restricted deposits and securities in Tolar including subordinated debt were added, so that the aggregate consists in addition to M1 also of Tolar time deposits at banks, and Government time deposits at the Bank of Slovenia and of Tolar securities.

To aggregate M3, other foreign currency liabilities to central government and securities in foreign currency were added, so that M3 consists of M2 and foreign currency deposits and securities at banks.

Other liabilities consist of capital and reserves of banks and of the Bank of Slovenia and also include some other items.

In the Table as from April 30, 1999 in conformity with SKIS, items of assets and liabilities to other general government mean assets and liabilities to both Local Government and Social Security Funds. By analogy, enterprises mean non-financial corporations and non-profit institutions serving households, and individuals mean households.

From July 31, 1996 onwards, the data for Komercialna banka Triglav are no longer included in banks' data due to its bankruptcy.

Foreign assets/Bank of Slovenia and *Foreign assets/Deposit money banks* were changed because of changes in Tables 1.3. and 1.4. for the period from April 2000 onwards.

Table 1.3.: Balance Sheet of the Bank of Slovenia

The Table shows the Bank of Slovenia's assets and liabilities at the end of month.

Foreign Assets consist of: foreign currency, deposits abroad (sight and time deposits, from April 2000 on also foreign exchange deposits held by BS on the basis of repurchase agreements) first class securities of foreign issuers, monetary gold, reserve position and SDR holdings at the International Monetary Fund and other claims. *Other claims* mainly include balances on fiduciary accounts and with international financial organization.

Because of consolidation of statistical and bookkeeping records in February 2003, *International monetary reserves* are not presented as subitem of Foreign assets. International monetary reserves are shown in Tables 3.12. and 1.9..

Claims on General Government consist mainly of net claims on the National Bank of Yugoslavia taken over by the Succession Fund of the Republic of Slovenia. Claims on the state budget, which are the counterpart of the succeeded liabilities to the International Monetary Fund, are also included.

Repurchase agreements include loans extended to banks based on securities and foreign currency (currency swap). From April 2000 on the amount of the foreign currency swap is shown as a part of the foreign assets of the Central Bank, because of the gradual permanent purchase of foreign currency from the part of Central Bank. In accordance to this are claims based on currency swap with domestic banks shown for the period up to March 2000 in the item *Repurchase* and thereupon in the item *Deposits*.

Other claims include some Bank of Slovenia's small deposits with banks and advance payments to the banks for repayments of Bank of Slovenia bills sold to other buyers through banks as agents.

General Government Deposits comprise deposits of Central Government budget.

Restricted deposits mainly result from deposits earmarked for import payments and deposits covering letters of credit, guarantees and credits taken abroad.

Money transfers in transit comprise money in transit.

Revision in time series caused changes in items *Deposits/Enterprises* and *Deposits/Nonmonetary financial institutions* for the period from February 1998 on. Whereas item *Deposits/Other demand deposits*, which represents the sum the mentioned two remains unchanged.

Table 1.4.: Balance Sheet of Deposit Money Banks

The Table summarizes data on assets and liabilities of banks at the end of the month.

Demand deposits comprise giro accounts of enterprises and non-profit institutions, General Government, non-monetary financial institutions and giro and current accounts of households (see Table 1.6.).

Savings deposits include short and long-term tolar savings deposits of households (see Table 1.6.).

Time deposits consist of short and long-term time deposits of households, General Government, non-monetary financial institutions, enterprises and non-profit institutions (see Table 1.6.).

Restricted deposits represent deposits of enterprises and non-profit institutions, General Government and individuals to be used for money transfers to foreign countries or in cover of letters of credit, loans taken abroad or euro-checks, and can also be used for foreign currency exchange office transactions.

Note 1: In June 1996 foreign liabilities of banks for the undue foreign debt of former SFR Yugoslavia in the amount of SIT 49,027 million were taken over by the Government. Liabilities of banks to the Government were increased for the same amount. The banks decreased their foreign liabilities and claims on the Government for the part of matured allocated debt which they had been repaying to the government fiduciary account since January 1994 totalling SIT 18,078 million.

Bank of Slovenia's claims on and liabilities to banks are equal to the corresponding items in the banks' aggregated balance sheet with few exceptions: Item 'Reserves' (Giro and reserves accounts) on the assets side of banks' balance sheet is almost the same as item 'Deposits of banks' (Giro and reserves accounts, foreign currency deposits) on the liabilities' side of the Bank of Slovenia's balance sheet (Table 1.3.). Similar applies to items 'Liabilities to the banking system' arising from the Bank of Slovenia loans and 'Claims on domestic banks' based on loans in the Bank of Slovenia balance sheet (Table 1.3.). Discrepancies result from differences in accounting accuracy.

In February 2003 were items *Currency and Deposits* and *Loans from BS* diminished by the amount - claim i.e. liabilities based on currency swap of central banks with domestic banks, for period from April 2000 on. (More in Methodological notes for Table 1.3. - Repurchase). Total assets i.e. total liabilities were diminished accordingly.

Claims on and liabilities to domestic non-monetary sectors are shown in detail in Tables 1.5. and 1.6. Foreign assets and foreign liabilities are shown in detail in Tables 1.7. and 1.8.

Table 1.5.: Deposit Money Banks' Claims on Domestic Non-monetary Sector

The Table shows banks' claims resulting from loans and securities classified by domestic non-monetary sectors, which are also represented in Table 1.4. in item 'Claims on non-monetary sectors - Total'.

As from April 30, 1999 SKIS has been implemented in the sectorial distribution of the economy and therefore:

- the sector *Enterprises and non-profit institutions* comprises the data on SKIS Sectors *Non-financial corporations* and *Non-profit institutions serving households*;
- the sector *Central government* comprises the data on SKIS subsector *Central government*;
- the sector *Other general government* comprises the data on SKIS subsectors *Local government* and *Social security funds*;
- the sector *Individuals* comprises the data on SKIS sector *Households*;
- the sector *Non-monetary financial institutions* comprises the data on *Savings banks* and *Savings cooperatives* as well as the data on SKIS sector *Other financial institutions*.

Marketable securities are long or short-term securities acquired and held by a bank with the intention of reselling them in the short term.

Investment securities are long or short-term securities acquired and held for yield or capital growth purposes and are usually held to maturity.

Table 1.6.: Deposit Money Banks' Liabilities to Domestic Non-monetary Sector

The Table shows banks' liabilities from deposits of domestic non-monetary sectors which correspond to the 'Liabilities to non-monetary sectors - Total' in Table 1.4.

As from April 30, 1999 SKIS has been implemented in the sectorial distribution of the economy and therefore:

- the sector *Enterprises and non-profit institutions* comprises the data on SKIS Sectors *Non-financial corporations* and *Non-profit institutions serving households*;
- the sector *Total General government* comprises the data on SKIS sector *General government*;

- the sector *Individuals* comprises the data on SKIS sector *Households*;
- the sector *Non-monetary financial institutions* comprises the data on *Savings banks* and *Savings cooperatives* as well as the data on SKIS sector *Other financial institutions*.

Table 1.7.: Deposit Money Banks' Claims to Non-residents

The Table shows banks' claims to non-residents by currency- Tolars and foreign currencies. Deposit Money Banks' Claims to non-residents are shown in Table 1.4. in item 'Total – Foreign assets'.

In February 2003 was item *Deposits* diminished by the amount - claim based on currency swap of domestic banks with central banks, for period from April 2000 on. (More in Methodological notes for Table 1.3. - *Repurchase*). Item Total claims on non-residents was diminished accordingly.

Table 1.8.: Deposit Money Banks' Liabilities to Non-residents

The Table shows banks' liabilities to non-residents broken by currency- Tolars and foreign currencies. Deposit Money Banks' Liabilities to non-residents are shown in Table 1.4. in item 'Total – Foreign liabilities'.

Table 1.9.: Bank of Slovenia 10-day balance sheet

In April 2002 the definition of base money has been changed to the sum of: *Banknotes in circulation*, *Banks' settlement accounts*, *Oversight deposit* and *Other deposits at the Bank of Slovenia* (Savings banks' settlement accounts, Savings banks' and Savings and loan undertakings' reserve accounts, transactional accounts of the Central and Local Government).

The data time series have been recalculated according to the change in definition.

The off balance items *Buy/sell foreign exchange swap* and *Sell/buy foreign exchange swap* are from April 2003 on are included in the table.

Bank of Slovenia 10-day balance sheet together with off balance items is in terms agreed for publication shown on web page:

http://www.bsi.si/html/eng/financial_data/hit/balance_bs_dekadna.html

2. FINANCIAL MARKETS

Interest rates (Table 2.1. - 2.6.)

Annual interest rates.

r = real rate over Tolar indexation clause

r(D) = real rate over foreign exchange indexation clause

n = overall nominal rate

TOM = Tolar indexation clause

EUR = foreign exchange clause

Table 2.1.: Bank of Slovenia Interest Rates

Lombard loan: Within the framework of standing lombard facility Bank of Slovenia provides one-day lombard loans to banks and savings banks with securities used as collateral. The pledged securities should amount to 110% of the amount of lombard loan.

Repo interest rate for the temporary purchase of treasury Bills, tolar and foreign currency Bank of Slovenia's Bills with obligatory repurchase in 7 days was the weighted arithmetic average of daily repo interest rates until March 2004 (effective interest rate). The new 7-day repo was introduced in March 2004, it is offered on a closed basis. The interest rate announced is the latest valid interest rate.

Interest rate on banks' obligatory reserves: 1 percent per year since October 1991.

The overnight-deposit interest rate is an interest rate applying to the deposits placed by banks and savings banks on an overnight term with the Bank of Slovenia.

Long-term deposit at Bank of Slovenia has been established in July 2004. Variable interest rate refers to 60-day tolar bills' interest rate, increased by 0,2 percentage points.

Tolar bills are registered securities subscribed by banks and savings banks with maturity of 60 and 270 days. 60-day bills are offered on a permanent basis, 270-day bills were sold by auction till February 2004, afterwards are offered on a closed basis. Interest rates for tolar bills are nominal given, in the case of auctions they are effective rates. Offers of 270-tolar Bills have been frozen since November 2004.

Foreign currency bills are transferable registered securities not issued in series. They are offered on

permanent basis and can be purchased by banks (by other legal persons through banks till 3rd May 2000). They are sold for Euros (till 16.02.1999 for German Marks) or US Dollars at a discount with maturities of two to four months.

Penalty rate is generally used in cases of overdue payments. The penalty rate is determined by the Law on the legal penalty rate since 28.06.2003.

Interest rates for a certain type of instrument in the table are those last valid in a period (except in the case of effective interest rates). The annual averages of interest rates are computed as simple arithmetic averages of monthly data, if such data are available.

Table 2.2.: Interbank Money Market Rates and Indexation Clause

Interbank market

The figures are annual nominal interest rates for unsecured Slovenian tolar deposits on the Slovenian interbank market. Interest rate for overnight deposits (SIONIA) is weighted average interest rate for overnight deposits. Interest rate for deposits till 30 days is weighted average interest rate for deposits with maturity till 30 days.

The annual averages of interbank interest rates are computed as simple arithmetic averages of monthly data.

Tolar indexation clause

Tolar indexation clause (TOM) is annual interest rate, calculated by the Statistical Office of Republic of Slovenia and used for preserving the value of financial liabilities and assets in domestic currency.

TOM (monthly): since 5th August 1995: average of previous 3 months' inflation (until June 1995 indexation was based on so called R that was equal to the previous months' inflation rate, from 1st June till 4th August 1995 indexation was based on the average of previous 3 months' inflation); since February 1996: 4 months; since December 1996: 6 months; since May 1997: 12 months.

Financial liabilities and assets in domestic currency, with maturity less than 1 year, are not revalued since July 2002.

Foreign exchange indexation clause

Monthly rate is growth rate of Bank of Slovenia's end of month exchange rate for EUR (DEM) or USD.

Annual rate is computed from monthly rate on the conform basis, taking into account the actual number of days in the month and in the year.

Figures for 1993 to 1998 in columns 4, 6 and 8 represent growth of the category in the period December to December.

Table 2.3.: Average Commercial Banks' Interest Rates

Average interest rates (r and $r(D)$) are weighted arithmetic averages of the minimum and maximum interest rates.

Spread is the difference between the weighted minimum and maximum interest rate: $r_{min}=r - spread$, $r_{max}=r+spread$.

Nominal interest rates (n) are total annual interest rates.

The figures for the latest month are always provisional; updated figures in the following Monthly Bulletin are not marked with sign *.

With September 1995 was abolished the revaluation with the tolar indexation clause for obligations in domestic currency till 30 days, with July 2002 also revaluation for all loans and deposits in domestic currency with maturity less than 1 year.

Note 1: With the 1st July 2002 the "Law on changes and completions of the law on penalty rate and tolar indexation clause" came into force. It prohibits the use of tolar indexation clause for assets and obligations in domestic currency with the maturity less than 1 year. At the same time have most banks also stopped using the foreign exchange clause for short-term loans and deposits, which has reduced the number of reporting banks and led to series breaks.

Table 2.4.: Average Commercial Banks' Interest Rates on New Loans

Average interest rates on new loans are calculated on a basis of the data of the eight biggest banks, selected by balance-sheet-total criterion. New loans represent new contracts in the reference month. Data for consumer loans to households is collected on the representative sample of new loans (limited number of reports, min/max value). Any automatically changed conditions of lending contracts do not represent new business.

Interest rate on new business is a nominal interest rate increased by a sum of base interest rate or interest rate bounded to the euro exchange clause and subsidy per annum. Average interest rate on new business does not include any administrative or other costs.

All the interest rates are nominal weighted arithmetic averages, where value of certain type of loan represents the weight, except for foreign currency loans where the growth of foreign exchange rate is not taken into consideration.

The interest rates are presented separately, according to their type:

- NOM = a nominal interest rate, without indexation,
- TOM = an interest rate is bound to the base interest rate (TOM),
- D = an interest rate is bound to the euro exchange clause.

The annual averages are computed as simple arithmetic averages of monthly data.

Table 2.5.: Average Commercial Banks' Interest Rates on Basis of Interest Income and Interest Expenses

Interest rates are computed as the ratio of the amount of interest to the average balance of assets. Interest is represented by the interest income and interest expenses. The average amount of investments/assets is a sum of daily values divided by the number of days.

Because of the change in the frame of accounts for banks and savings banks since May 2002 the revalorization and interest incomes are no more represented separately, so the calculation of the real effective interest rates is no longer possible.

Table: Breakdown of bank` assets and liabilities by type of Indexation Clauses

		Loans			Deposits			Total		
		TOM	D	NOM	TOM	D	NOM	TOM	D	NOM

Ljubljana Stock Exchange (Tables 2.7. to 2.9.)

Table 2.7.: The Ljubljana Stock Exchange: Turnover by Market Segment and by Type of Securities

Shares – Privatization Investment Funds shares are not included.

PIF - Privatization Investment Funds shares.

Turnover is measured by a single counting.

Table 2.8.: The Ljubljana Stock Exchange: Market Capitalization and Turnover Ratio

Market capitalization by market segment and by type of securities is calculated as the sum of market

capitalization of individual securities. Market capitalization of an individual security is calculated as the product of the number of listed securities and the market price at the end of period.

Turnover ratio is calculated as turnover in a period divided by market capitalization at the end of period.

Short-term securities are not included in calculations of market capitalization and turnover ratio.

Table 2.9.: The Ljubljana Stock Exchange: Slovenian Stock Exchange Index and Bond Index

SBI - Slovenian Stock Exchange Index (index value: January 1994=1000)

BIO - Bond Index.

SBI, BIO - value of SBI and BIO at the end of period.

dT - change of index value by points.

d% - change of index value in percentage.

Min, Max - minimum and maximum value of index in a period.

Exchange rates (Tables 2.10.1. to 2.11.4.)

Tables 2.10.: Selected Bank of Slovenia Exchange Rates- Average Rates

The tables show Bank of Slovenia middle rates. Annual rates are computed as arithmetical averages of monthly rates. Monthly averages are computed as arithmetical averages of daily rates (Sundays and holidays are not included).

As from 1st January 1999, with introduction of European Monetary Union, the European Currency Unit (XEU) was replaced by the Euro (EUR) at the exchange rate 1 :1. Fixed exchange rates between the Euro and the national currencies of the EMU Member States (valid from 1st January 2001):

1EUR =	40.33990 BEF
=	1.95583 DEM
=	340.75000 GRD
=	166.38600 ESP
=	6.55957 FRF
=	0.78756 IEP
=	1936.27000 ITL
=	40.33990 LUF
=	2.20371 NLG
=	13.76030 ATS
=	200.48200 PTE
=	5.94573 FIM

Due to the introduction of Euro in January 2002 the exchange rates of members of EMU currencies (ATS, FRF, DEM, ITL) are replaced by the exchange rates of some EU accession countries (CZK, HUF, PLN, SKK).

Introduction of a new currency, the Kuna (=1,000 previous Croatian Dinars) on 30th May 1994.

The Polish zloty was denominated on 1st January 1995 at the exchange rate 1 new zloty for 10.000 old zlotys.

Tables 2.11.: Turnover and Foreign Exchange Market

Annual rates are computed as arithmetical averages of monthly rates. Monthly rates are averages computed from daily rates on working days, weighed with turnover. Foreign currency exchange offices also report transactions on Saturdays, not shown in the table, but included in the monthly and annual totals.

Totals also include transactions between banks and enterprises and between banks solely. In addition to that the transactions between enterprises are included until 30th September 1999 and the transactions of banks with non-residents and households from 1st October 1999.

On the spot exchange market the timing of settlement is at latest 2 working days from the agreement. The forward exchange market is designed for transaction where the timing of settlement is at least 2 working days after the agreement.

The data by the contract agreement are defined by the agreement time of the transaction. The data by the contract settlement are time defined by the settlement time of the transaction.

Data for the turnover on the forward exchange market are available from October 1999. Also the data for turnover by the settlement are available only from October 1999.

3. BALANCE OF PAYMENTS AND EXTERNAL POSITION

Balance of Payments (Tables 3.1. to 3.4.)

General notes

In most respects the Slovenian Balance of Payments (BOP) conforms to the methodology of the IMF's *Balance of Payments Manual, fifth edition* (1993).

Characteristics of the Data

Minus sign (-) indicates imports or surplus of imports over exports in the current account, increase in assets or decrease in liabilities in the capital and financial accounts, and growth of reserve assets. Data for transactions are converted from original currencies to EUR using the daily Bank of Slovenia exchange rates, or average exchange rates of the period if the exact date of transaction is not known.

Revision policy

Revision of balance of payments, international investment position and gross external debt data occur as follow:

- revision for **monthly data** are made with the release of:
 - the corresponding quarterly data;
 - the corresponding revised quarterly data;
 - the international investment position data for the corresponding year; and
 - the revised international investment position data for the corresponding year;
- revision for **quarterly data** are made with the release of:
 - the data for the following quarter;
 - the international investment position data for the corresponding year; and
 - the revised international investment position data for the corresponding year;
- revision for **annual** international investment position and external data are made with the release of the data for following years.

Data sources

BOP is compiled on the basis of monthly available data on transactions (ITRS), stock positions and estimates.

- **Reports on transactions**
 - accounts of domestic banks held with correspondent banks abroad (including the central bank),
 - nonresident accounts held with domestic banks,
 - non-bank resident accounts abroad,
 - other accounts between residents and nonresidents,
 - payments between residents and nonresidents in Slovenian Tolars.
- Classification of transactions is using the descriptions of transactions provided by the banks' clients;
- **Reports on short-term claims and liabilities to non-residents (form SKV)** is a source for short-term trade credits since 2002.
- **Customs declarations**; from 1.5.2004 data on goods item for EU countries are collected through reports (**Intrastat**), while data for other countries are collected through Customs declarations (**Exstrastat**).
- **Reports to the Bank of Slovenia on registered credits granted to and disbursed abroad**; For the period from 1997 also data on nature of direct payments from foreign creditors, which settle liabilities of domestic debtors to other nonresidents, are available from these reports.
- **Yearly surveys on balance and transactions with affiliated enterprises (SN)** is a source for reinvested earnings of direct investments.
- **Accounting data of the Bank of Slovenia**;
- **Commercial banks balance sheet data**;
- **Estimates**.
- **Monthly survey of duty free shops**.

There are several estimation models used in the BOP for the valuation of data on imports, incoming travel, labor income, Italian pensions (till the end of 1998), foreign currency and deposits of resident households.

Current account

Goods

Data for the General merchandise are based on customs declarations. Data on imports c.i.f. and exports f.o.b. are compiled by the Statistical Office. **Adjustments for valuation** of data on imports and **coverage** of data on imports and exports are made by the Bank of Slovenia. The imports data are adjusted from c.i.f. basis to f.o.b. basis by the coefficient which is equal to the weighted average of coefficients between

the c.i.f. and f.o.b. values of imported goods (for the available sample), separately calculated for each type of merchandise, transport means and country of the exporter. The **coverage adjustments** are made for goods imported without customs declaration and for which data are available from ITRS or reports of duty free shops and consignment warehouses. Since 1.5.2004 the coverage adjustments include as an estimate also data on imports of motor vehicles from EU by natural persons, not covered in Intrastat System.

Services

Transport

The source for recording of transportation services is the ITRS.

Travel

The ITRS sources used in the compilation of the **incoming travel** item include: a.) health and education related services, b.) payments made by nonresidents to Slovenian tourist agencies, c.) net withdrawals in tolars from nonresident accounts, d.) money spent in casinos by nonresidents, e.) data on sales of goods to nonresidents in duty free shops and consignment warehouses, f.) payments with credit cards and g.) sales of Tolars to nonresidents abroad.

The data on sales of Tolars to nonresidents in Slovenia are estimated on the number of border crossings of foreign travellers and on the number of nights spent by foreign tourists.

Data source for the item expenditure on travel are ITRS and estimations.

Construction services

The source of data is ITRS. All construction works are recorded under construction services.

Insurance services

Premiums on life and non-life insurance are split into two components: (i) the service charge included in insurance services and (ii) the premium in a narrow sense recorded as current transfer. The calculation of service charge is based on a fixed percentage of the premium payments.

Government services

All transactions settled through accounts of Slovenian embassies abroad as well as transactions coded as government services settled through accounts of Slovenian banks with foreign correspondents are included in this item.

Income

The ITRS is used as a main source for recording of **compensation of employees**. As many wages are not paid through domestic banks, supplementary estimations of such receipts from the neighboring countries are made. Data on **reinvested earnings and income on equity** are available in an annual survey of Slovenian direct investors abroad and of foreign direct investment enterprises in Slovenia. The present recording of **other investment income** (interest income) is based on the actual payments.

Current transfers

In this item workers' remittances, insurance and other transfers of other sectors are included. The **insurance** item is calculated as a difference between the insurance premiums received and the claims paid on the credit side and vice versa on the debit side. The main source for **other transfers** are the ITRS and the customs documents.

Capital and financial account

Capital account

Capital transfers

Migrants' transfers covers not only payments recorded by domestic banks but also the changes in residency of accounts held with these banks.

Financial account

Direct investment

Direct investment is recorded on the basis of reporting of payments through domestic banks and of data from customs declarations. Data on reinvested earnings is based on yearly surveys on balance and transactions with affiliated enterprises (SN) and are included monthly as one twelfth of the yearly figure.

Until 1997 purchase and sale of all shares and equity have been included in this item.

From the beginning of 1997, purchase and sale of shares that assure more than 50 percent of company's equity, a control package of shares, shares issued by domestic companies on the primary markets with the purpose to increase the nominal capital of the company are included in this item, due to capital control measures. With the new Foreign Exchange Act in 1999 direct investment 10% rule is applied.

From 2001 onwards inter-company debt transactions between affiliated enterprises (10 percent or more capital share) are recorded as direct investment - other capital transactions. Until 2001 this kind of transactions are recorded as loans. Since 2002 the item other capital within direct investments includes also data on short-term trade credits between affiliated enterprises.

Portfolio investment

Until 1997 only data on sales and purchases of debt securities through banks were included in this item. Since

February 1997 equity securities, not having the characteristics described in the note on Direct investment are included in this item too. With the new Foreign Exchange Act in 1999 portfolio investment transactions include all transactions below the 10% rule.

Loans

From 2001 onwards inter-company debt transactions between affiliated enterprises (10 percent or more capital share) are not recorded as loans, but are recorded as direct investment - other capital transactions.

Other investment

Other investments except equity between affiliated enterprises are included here and not under Direct investment. Short-term trade credits are estimated and recorded on net basis as change of assets till 2001. Estimation is based on comparison of data on imports and exports from customs declarations with corresponding settlements. Since 2002 onwards short-term trade credits are included on the basis of reports on short-term claims and liabilities to non-residents. Short-term trade credits between affiliated enterprises are included in direct investments. Item currency and deposits of households is estimated by using data on net purchases of foreign currency in foreign exchange offices, net deposits to households' foreign exchange accounts at domestic banks, estimated expenditure of resident households abroad (see Travel).

Tables 3.1.: Balance of Payments 1988 - 1992

Excluding transactions with former Yugoslav Republics; processing is included in services, excluded in merchandise.

Note 1: For 1988 and 1989, Official sector data is included in Other sectors.

Note 2: For 1988 through 1990, Statistical errors include sales of claims from bilateral agreements to the former National Bank of Yugoslavia and its purchases of foreign currency through Slovenian foreign currency exchange offices.

Note 3: Reserve assets of the Bank of Slovenia.

Tables 3.2. and 3.4.: Balance of Payments

The data for the current year are revised monthly. Data become final according to the revision practice (see revision practice).

In June 2001 Slovenia acquired 16.39% share in holdings of former Yugoslavia with BIS (Bank for International Settlements), consisting of gold 16.9 mio SIT (EUR 77.8 million), foreign currencies 1.1 mio SIT (EUR 5.3 million) and shares 3.0 mio SIT (EUR 13.8 million). This transaction is not considered to be a balance of payments' flow, but a part of 'other changes' item, which reconciles the international investment position in consecutive periods.

Note 1: CD: customs declarations - foreign trade definitions (Statistical Office of Republic of Slovenia).

Note 2: June 1996: includes issue of government bonds in exchange for a part of allocated foreign debt in the amount of 63.7 mio SIT (EUR 374.9 million). Banks' liabilities under foreign loans are decreased for the same amount and transferred to liabilities to Government.

Note 3: Issues of government bonds:

- August 1996 (EUR 253.7 million);
- June 1997 (EUR 205.1 million);
- May 1998 (EUR 500.0 million);
- March 1999 (EUR 400.0 million);
- March 2000 (EUR 400.0 million) and in February 2001 (EUR 100.0 million);
- April 2001 (EUR 450.0 million).

Note 4: For 1993-2001, short-term claims include net changes in commercial credits (received and granted). Since 2002 onwards short-term commercial credits are included on the basis of SKV reports on assets' and liabilities' side of balance of payments. Short-term commercial credits between affiliated enterprises are included in direct investments item while other commercial credits are included in other investments/trade credits.

Note 5: Includes mostly BS fiduciary accounts. In June 1996 the amount of 21.2 mio SIT (EUR 124.9 million) was transferred to regular BS reserve accounts.

Note 6: Use of IMF credit (assumed upon membership in January 1993).

Note 7: Reserve assets of the Bank of Slovenia.

Note 8: The data for reinvested earnings for the years 2004 and 2005 is not available yet, therefore a five-year average (from 1999 to 2003) of reinvested earnings is included as an estimation. In the year 2005 this estimation will be replaced with the actual data for reinvested earnings for the year 2004 and an estimation (five year average - from 2000 to 2004) for the year 2005.

Note 9: From 2001 there is a time series break on the items direct investment and loans. From 2001 inter-company debt transactions between affiliated enterprises (10 percent or more capital share) are included in the direct investment item, before that they were included in loans item. Since 2002 the item direct investments includes also short-term trade credits between affiliated enterprises.

Note 10: Transfers from EU budget are since 1.5.2004 recorded in current and capital transfers according to the nature of their use. Split between current and capital transfers is provided by the Ministry of Finance.

Table 3.5: Merchandise trade

The Merchandise trade data for the current month are estimated, due to the change in reporting system for trade statistics (Intrastat).

Exports f.o.b. and imports c.i.f. Years 2004: provisional data (Source: Statistical Office of RS).

The effective exchange rate: Growth of index denotes growth of value of Tolar, and vice versa.

3.6 Short-term commercial credits

Tables include positions of claims and liabilities of short-term commercial credits by countries/groups of countries in the last eight months. Data source is direct reporting of enterprises (reports SKV).

International Investment Position of Slovenia (Table 3.7.)

General notes

The international investment position is the balance sheet of the stock of external financial assets and liabilities. The financial items that comprise the position consist of claims on nonresidents, liabilities to nonresidents, monetary gold, and SDRs.

Methodology of the international investment position (IIP) of Slovenia is based on the fifth edition of the *Balance of Payments Manual*, IMF, 1993. The Manual distinguishes four sectors - monetary authorities, general government, banks, and other sectors.

Revision policy

See revision policy notes for "Balance of Payments" (Tables 3.1. to 3.4.).

Data sources

Data sources for the international investment position of Slovenia are mainly the same as those for the balance of payments financial account. However, there are differences with some items as follows:

Direct investment

Data on direct investment are collected from:

- concessional surveys on equity investment (SN),
- reports on loans granted to or received from nonresidents,
- short term commercial credits with nonresidents (SKV),
- reports on accounts abroad.

Source for the balance of payments is *international transactions' reporting system* - ITRS and reports on loans granted to or received from nonresidents.

In accordance with the recommendations of IMF, this item comprises investment where direct investor owns 10 percent or more of ordinary shares or voting power. Equity shares are valued at book value according to the accounting standards. Reinvested earnings are included.

Claims on and liabilities to affiliated enterprises are included in direct investment-other capital item. Intercompany claims or liabilities between affiliated banks and affiliated financial intermediaries recorded under direct investment capital are limited to those associated with permanent debt (loan capital representing a permanent interest). Until 2000 all long term intercompany claims are liabilities between affiliated banks and affiliated financial intermediaries were included in this item (not only permanent debt).

Data on claims and liabilities of Slovene enterprises in indirectly affiliated enterprises from 1996 onwards are included in the item 'Direct investment abroad' (in case when enterprise abroad having Slovene direct investment holds 10% or more of equity in other foreign enterprise). In the item 'Direct investment in Slovenia' data on investment of foreign enterprises in indirectly affiliated enterprises in Slovenia are included (in case that Slovene enterprise with foreign direct investment holds 10% or more of equity in other Slovene enterprise).

Portfolio investment

Data on equity securities and other equity shares are also available from enterprises' surveys (form SN), but only data from surveys where direct investor owns less than 10 percent of ordinary shares or voting power, are included. (In the balance of payments, transactions with equity securities and other shares are collected from ITRS (see note to Tables 3.1. to 3.4. /Capital and financial account/Portfolio investment)).

Data on residents' holdings of debt securities are available from direct reports from banks, and brokerage houses. For the balance of payments these data are collected from ITRS.

Liabilities of debt securities of government, banking and other sectors are available from credit registration from and Central Securities Clearing Corporation.

Trade credits and loans

Source for short-term trade credits are *reports of enterprises on stock of external claims and liabilities* (form SKV).

Sources for long-term trade credits and loans are credit registration forms and are the same for the international investment position and the balance of payments. Until 2000 the balance of payments did not distinguish loans between affiliated companies from loans between unaffiliated companies and included all loans in other investment items.

Currency & deposits, other assets, other liabilities and reserve assets

Sources of data for these items are banks' reports and Bank of Slovenia accounting data and are consistent with those for the balance of payments.

In the IIP arrears on loans and long term commercial credits are included in other claim/liabilities as short term item. Balance of payments does not include arrears.

The item "Assets / Currency and deposits of other sectors" in international investment position also includes data from the Bank for International Settlements (BIS) on deposits of Slovenian households in the banks in member states of BIS.

Till 2002 the item "Other liabilities of other sectors" in the IIP consists of the data on contractual joint ventures, which are not available for the balance of payments.

Table 3.7.: International Investment Position of Slovenia

IIP data do not include:

- data on real estate owned by Slovenian households abroad (mainly real estate in Croatia),
- claims on other countries on the territory of former SFR Yugoslavia, subject of negotiations on succession, expropriated assets in these territories and other assets transferred to the Slovenian government during the process of privatization.

Additional data on Direct Investment are available in a special publication of the Bank of Slovenia: 'Neposredne naložbe – Direct Investment' and on Bank of Slovenia Web site: <http://www.bsi.si/html/eng/publications/index.html>.

Gross External Debt (Tables 3.8 to 3.11)

General notes

Methodology is based on External Debt Statistics: Guide for Compilers and Users, IMF, 2003.

The guide is available under the following web address:

<http://www.imf.org/external/pubs/ft/eds/Eng/Guide/index.htm>.

Revision policy

See revision policy notes for "Balance of Payments" (Tables 3.1. to 3.4.)

Data sources

Gross external debt consists of debt liabilities from the international investment position (IIP). Data sources for Tables 3.8 to 3.10 are the same as those for the international investment position excluding the data on direct investment.

Table 3.8 Net External Debt

The table presents gross external debt, gross external assets in debt instruments, and net debt position. The data are the same as presented in the international investment position (IIP). The net external debt position is equal to gross external debt deducted by gross external assets in debt instruments.

Table 3.9 Gross External Debt

Gross external debt, at any given time, is the outstanding amount of those current, and not contingent, liabilities that require payment(s) of principal and/or interest by the debtor at some point(s) in the future and are owed to non-residents by residents of an economy. The types of financial instruments included in the presentation of the gross external debt position are as follows: debt securities (money market instruments, bonds and notes), trade credits (short- and long-term), loans (short- and long-term), cash, deposits and other debt liabilities. Maturity for debt liabilities is based on the formal criterion of original maturity. Long-term debt is defined as debt with an original maturity of over one year or with no maturity stated. Short-term debt, which includes cash, is debt repayable at notice or with an original maturity of one year or less.

Debt instruments are valued at nominal value. Accrued interest is excluded.

Before July 2003, gross external debt was presented in Table 3.9 External Debt and in Table 3.12.2 International Investment Position of Slovenia - Liabilities:

Stocks as at 31 December 2002		bil of EUR		
NET POSITION	1,4	=	NET POSITION	1,4
CLAIMS-total	13,6	=	CLAIMS-total	13,6
LIABILITIES-total	15,0	=	LIABILITIES-total	15,0
EQUITY AND EQUITY SECURITIES	3,5	=	EQUITY AND EQUITY SECURITIES	3,5
DEBT LIABILITIES	11,5	=	GROSS EXTERNAL DEBT	11,5
EXTERNAL DEBT (World Bank concepts - Grey Book)	8,4			
Long-term debt	8,3			
Public and publicly guaranteed	3,1			
Private non-guaranteed *	5,2	→ 4,7	Public and publicly guaranteed debt **	3,2
Short-term debt	0,1	0,6	Private non-guaranteed debt	8,3
DEBT INSTRUMENTS INCLUDED ONLY IN TABLE INTERNAL INVESTMENT POSITION OF SLOVENIA	3,1		Part of debt instruments of private non-guaranteed gross external debt-total	3,6
Money market instruments - general government **	0,1		Short-term trade credits	1,7
Short-term trade credits - other sectors	1,7		Currency and deposits	0,7
Currency and deposits-banks	0,7		Other debt liabilities	0,2
Other liabilities-banks and other sectors	0,2		* Liabilities to direct investors and affiliated enterprises	1,0
Liabilities to direct investors and affiliated enterprises				
Short-term trade credits	0,4			

*Liabilities to direct investors and affiliated enterprises are not broken down by debt instruments (concept of new standard). An amount of 1.0 bil. of EUR included: 0.4 bil. of EUR short-term trade credits and 0.6 bil. of EUR loans (short- and long-term)

** Data from Central Securities Clearing Corporation

Table 3.10 Debt – Service Payment Schedule

Service payments projected are estimates of payments due on existing debt outstanding and do not include interest rate changes.

Table 3.11 Debt indicators

Note 1: Short-term debt includes the value of short-term external debt outstanding (original maturity) and the value of long-term external debt outstanding (original maturity) due to be paid in one year or less.

International Liquidity (Table 3.12.)

Table 3.12.: International Liquidity

Foreign exchange reserves of the Bank of Slovenia and banks include foreign cash in convertible currencies, deposits abroad and first class securities of foreign issuers. Balances on fiduciary accounts are included in 'Other foreign assets'.

Foreign exchange reserves of banks are only part of item 'Foreign Assets' in Table 1.4. Foreign assets also include other foreign currencies, deposits abroad, foreign securities and other foreign assets, which do not have the nature of high liquid international funds.

4. GENERAL ECONOMIC INDICATORS

Table 4.1.: Derivation and Expenditure on Gross domestic product

Data for 1999 are partially estimated.

Table 4.2.: Quarterly real gross domestic product

1999 - 1994: constant prices 1992; reference year 2000;

1995 - 2000: constant prices 1995; reference year 2000;

2000 and following: constant prices 2000;

Table 4.3.: Industry

Data for production with breakdown by industries for years 1992 to 1993 and employment for years 1992 to 1995 are estimations based on methodologies used in those years.

Table 4.5.: Employment and unemployment

The majority of data for the period before 1997 are estimations based on methodologies used in those years.

Table 4.6.: Average wages

Real wages are deflated with consumer price index.

Table 4.7.: Registered households' income

Real aggregates are deflated with consumer prices index.

5. PUBLIC FINANCE**Table 5.1.: General Government Revenues and Expenditures**

Note 1: The data of the current and previous year are revised monthly until the data on previous year became final.

Tables 5.2.: General Government Lending, Repayments and Financing

General Government Operations (Consolidated state budget, local governments, pension fund and health insurance fund).

Note 1: The data of the current and previous year are revised monthly until the data on previous year became final.

Tables 5.3.: Debt of Republic of Slovenia

Republic of Slovenia is defined as a legal person. The data from tables 5.1, 5.2. and 5.3. originate in the Bulletin on Government Finance, published by the Ministry of Finance.

6. PAYMENT SYSTEMS AND PAYMENT INSTRUMENTS**6.2. Payment cards**

Note 1: *Credit cards:* A card indicating that the holder has been granted a line of credit. The credit granted may be settled in full by the specific data each month (delayed debit card ie. charge card), or may be settled in part, with the balance taken as extended credit (credit card).

Note 2: *Debit cards:* A card which enables the holder to have purchases directly charged to funds on the cardholder's bank account.

Note 3: *Cards, issued abroad:* payment cards issued abroad and used for payments in Slovenia, mostly by non-residents.

Note 4: *Volume and value of transactions abroad:* use of cards issued in Slovenia for payments abroad.

Number of payment cards in circulation: number of valid payment cards held by residents and non-residents, issued in Slovenia. Data refer to the end of each quarter/year.

Number and value of payments refer to the use of payment cards in each quarter/year.

Domestic cards: payment cards issued by banks and enterprises residents in Slovenia without licence agreements with foreign issuers.

Licence cards: payment cards issued by banks and enterprises residents in Slovenia under licence agreements with foreign issuers.

Bank card: payment cards issued by banks.

Retailer cards: payment card issued by non-banking institutions, mostly for use at specific retail outlets.

Personal cards: payment cards issued to natural persons (family cards included).

Business cards: payment cards issued to legal entities.

6.3. Other payment instruments and innovative payment schemes

Note 1: Data refer to the end of each quarter

Note 2: Data refer to payment transactions and money withdrawals at POS terminals in Slovenia.

6.4. Electronic banking

Note 1: Only debt transactions are included.

6.5. Credit and debit transfers

A paper-based payment order is a standardised payment instrument related to a credit transfer, in which the payer submits an order on a paper-based form. It means any instruction by an account holder to his payment service provider requesting the transfer of funds from his account to another account (also between accounts of the same account holder). A contemporary form can assure automated processing with ICR technology (Intelligent Character Recognition) or classic manual processing. A special form of paper-based payment order is the so-called special payment order, which is issued by a creditor to be paid by the debtor. The special payment order is presented by the debtor at the bank, which then credits his transaction account and transfers the amount to the account of the creditor. The special payment order was developed by the BoS in 1997.

A non-paper based payment order is an electronic payment order related to a credit transfer, which the customer of the bank submits to his bank on electronic storage media.

A standing order is an instruction from a customer to his bank to make a regular payment of a fixed amount to a named creditor. The payer authorises his bank (the bank at which he maintains a transaction account) to pay a specified amount regularly to another account. The payment must be repeated at least five times. The execution of payments occurs under exact conditions on a particular day of the month.

Direct credit is special form of payment instrument related to a credit transfer, initiated by the payer, which enables a cashless fund transfer from payer to payee. Direct credit is used for the execution of small value payments, e.g., salaries, pensions, dividends and similar payments to a large number of creditors.

Direct debit is a preauthorised debit on the payer's bank account initiated by the payee. It is a payment instrument consisting of automatic debiting of the debtor's account for goods and services delivered by the creditor. Direct debit is initiated by the payee. The debtor (payer) authorises his bank to transfer funds from his bank account to the creditor's account and the creditor to submit a payment order to the creditor's bank to be paid. A typical example is an electricity bill payment.

A special money order is a standardised paper-based debit instrument used to remit money to the named payee. A special money order is issued by a bank, allowing the individual named on the order form to receive a specified amount of cash on demand.

6.6. Network of commercial banks

Note 1: In the number of head offices two banks with the license for operation pursuant to the Constitutional Law only are included (Kreditna banka Maribor d.d. and Ljubljanska banka d.d. Ljubljana).

Note 2: Statistical Regions, Source: Statistical Office of the Republic of Slovenia, March 31, 2000. Data up to year 2000 are presented according to Standard Classification of Territorial Units - Statistical Regions of the Republic of Slovenia, January 1, 1999.

Note 3: Data referring to the Postal bank of Slovenia do not include units of the Post of Slovenia that operate for the Postal bank of Slovenia on the contractual basis.

Population	NLT 29 Q1/05			"Prva statistična objava - First release" (Statistical Office of the Republic of Slovenia)

* The period to which data to be released relate is shown in parentheses. NLT stands for *no-later-than*.

Financial and external sector data (except Merchandise trade) are first disseminated on the Bank of Slovenia Internet website, and later in the Bank of Slovenia Monthly Bulletin. At the end of business week, the precise dates of release during the following week are published on the Bank of Slovenia Internet website (http://www.bsi.si/html/eng/financial_data/hit/adv_rel_cal.html)

¹The data on interest rates are published by the Bank of Slovenia and Ministry of Finance separately.

²Data on representative interest rate of the BoS and interbank money market rates are disseminated whenever the change occurs.

³Data are disseminated daily on Bank of Slovenia's page Currency Exchange rates - for display (http://www.bsi.si/html/eng/financial_data/daily/tecajna_lista.asp) and on Archive of financial data (http://www.bsi.si/html/eng/financial_data/arhiv/index.html).
