The cooling in the eurozone economy that began in the second half of last year continued. Eurostat revised its year-on-year eurozone GDP growth estimate for the first quarter of this year downwards to 1.3% (previous estimate 1.4%). Consensus lowered its year-end economic growth forecast to 1.3% (from 1.5% in the previous month). The final estimate for economic growth in the USA in the first quarter was 3.7%, and Consensus slightly revised its forecast for this year's growth to 3.5% (from 3.4% in May). Inflation fell in the eurozone and the USA in May. Inflation fell to 1.9% year-on-year in the eurozone in May, and fell further in the USA to 2.8%. Core inflation was stable in the eurozone, which indicates an absence of demand-side inflationary pressures, and has gradually fallen in the USA this year. In line with expectations the Fed raised its key interest rate by 0.25 percentage points at the end of June to 3.25%, with further rises expected in the future. The ECB interest rate remains unchanged at 2.0%. The widening of the differential between American and European interest rates, the political crisis in the EU and the slow pace of industrial output in the eurozone is leading to a fall in the euro against the dollar. The euro fell by 4% against the dollar in June, and by 9% in the first six months of the year.

The slowdown of economic activity in Slovenia seen at the end of last year continued in the first quarter of this year, with year-on-year GDP growth at 2.6%. Exports were the main engine of economic growth in the first quarter, with net exports accounting for one-half of economic growth. The other components of GDP grew more slowly than last year – household spending recorded growth of 2.7% in the first quarter (compared with 3.5% last year) – with the exception of general government spending, which grew by 2.9% year-on-year. Gross investments in fixed assets fell by 0.5% year-on-year, while inventories made a negative contribution of 0.6 percentage points to economic growth. Growth in added value in manufacturing was modest at 1.1% year-on-year, while added value in financial intermediation recorded rapid growth of 11.5%. After a modest first quarter, industrial output grew by 3.7% year-on-year in April.

Growth in total household income remains sluggish. Year-on-year growth in total household income was 3.4% in the first four months of the year, or 0.7% in real terms. The low growth primarily reflects the year-on-year decline of 7.7% in other employment receipts, and the slow growth in social transfers, which averaged nominal growth of 2.7% this year to April. Growth in wage receipts strengthened further in April by 10.1%, and stood at 8.4% in the first four months of the year. Year-on-year growth in the active working population was 0.7% in April. This growth was primarily the result of a rise of 1.1% in the number of people employed at companies and organisations, and strong growth of 0.4% in employment in the small business sector, the highest since 2001.

Consumer prices rose by 0.1% in June, with year-on-year growth falling to 1.9%. The main features of June's price rises were a fall of 0.2% in prices of goods, and a rise of 0.6% in prices of services. Year-on-year growth in prices of goods fell to 1.6% in June, while that for services fell to 2.5%; year-on-year growth in food prices has been negative in the last three months, the June rate being approximately -2.5%. Prices of refined petroleum products have been the most important factor in inflation in the last year, having risen by approximately 15% year-on-year and contributed 1.1 percentage points to inflation, i.e. more than one-half. The volatility of prices of seasonal products and services and oil prices on world markets represents the largest risk of a temporary rise in inflation in the coming months.

The current account remains balanced. There was a current account surplus of EUR 14 million in the first four months of the year, compared with a deficit of EUR 42 million last year. The main factor in the improvement in current account results was the halving of the deficit in trade in goods. Financial outflows exceeded inflows by EUR 49 million in the first four months of the year. Prominent among inflows were loans from abroad (banks accounting for three-quarters, and companies for one-quarter), and a rise in non-residents' deposits at banks. Portfolio investments abroad and trade credits granted to the rest of the world were the prevalent outflows. With the current account in balance, April's financial account deficit led to a fall of EUR 74 million in foreign exchange reserves to EUR 7,515 million. With government eurobonds maturing, there was an additional fall of EUR 402 million at the end of May.

Total corporate borrowing at home and abroad remained at the same level as at the end of last year, with companies replacing foreign sources of financing with domestic sources to a great extent. Year-on-year growth in domestic corporate lending thus rose from 19.9% in December to 25.8% this May. Loans in foreign currency are prevalent, accounting for 74.8% of lending in the first quarter and 88.4% in April and May. At the end of last year the government was repaying debt, but it borrowed SIT 102 billion net in the first five months of this year. Growth in M1 is slowing, having moved from 27.8% in December to 23.7% in May. The repayment of government eurobonds to the rest of the world has temporarily stalled growth in the broad monetary aggregates. Year-on-year growth in M2 and M3 in May stood at 5.4% and 6.4% respectively. Growth in short-term dollar deposits is strengthening, while growth in foreign currency deposits has stalled.

A. MONETARY REVIEW

1. INTERNATIONAL ENVIRONMENT

Economic growth for the first quarter of this year in the eurozone was revised slightly downwards. Forecasts for economic growth for the whole year also continue to decline. Nevertheless some indicators are giving hope for an improvement in economic activity in the second half of the year. The economic growth forecast for the USA has been raised slightly. Later estimates show the eurozone economy to have grown 1.3% in the first quarter of this year, slightly less than the original estimate of 1.4%. The estimated quarterly growth was unchanged at 0.5%. The Consensus forecast of economic growth for the whole year was cut to 1.3% (compared with 1.5% in the previous month). The main factors in the reduction of the forecast were the outcomes of the referendums on the European constitution in France and the Netherlands, and the slowdown in industrial output in the EU. There could be an improvement in economic activity in the second half of the year. The main signs of potential turnaround are the forecast economic recovery in the USA and Asia, which could have a beneficial effect on European industrial output, and the depreciation of the euro against the dollar. The price of oil rising again is the greatest factor of uncertainty in the improvement of growth in the eurozone. The final estimate of economic growth in the USA in the first quarter of this year was 3.7% year-on-year, and 3.8% for the quarterly rate on an annual basis. Consensus slightly raised this year's growth forecast to 3.5% (the May forecast was 3.4%).

In June the Fed again raised its interest rate, while the ECB left its interest rates unchanged. As expected the Fed again raised its key central bank rate by 0.25 percentage points in June to 3.25%. Further rises are expected. The ECB is maintaining its key interest rate at 2.0%, and is giving no indications of any possible change. On the market there is still speculation about a possible cut in eurozone interest rates owing to the slow pace of economic growth.

Inflation in the eurozone and the USA fell in May, thanks to the fall in oil prices in the month. After a long period inflation in the eurozone fell below the 2.0% mark to 1.9%, while in the USA it fell to 2.8% year-on-year from 3.5% in April. The main factor in the slower growth in prices was May's fall in oil prices. Given the upturn in oil prices in June, both inflation rates are expected to rise. However core inflation (excluding volatile price categories such as oil prices) remains relatively stable in the eurozone, which means that there are no demand-side inflationary pressures, while at the end of the first quarter it had begun to fall in the USA, but remains at a higher level than last year.

The euro's fall against the dollar sharpened after the outbreak of the political crisis in the EU. Between the end of May and the end of June the euro lost 3.2% of its value against the US dollar. The euro is weakening primarily because of the uncertainties in the EU, while developments in the USA are having a lesser effect on the exchange rate. The fall in the euro was

mostly brought about by the EU's political crisis (the rejection of the European constitution in France and the Netherlands, the failed negotiations on the future budget plans), speculation about a possible cut in eurozone interest rates, and, not least, weak economic growth in Europe.

The European Union failed to approve the financial perspective for 2007 to 2013 at its summit in June. Pre-accession negotiations with Turkey are due to start this October, while state of negotiations with Croatia is still not determined. The financial perspective, which is the EU's budget framework, was not approved as the countries failed to reach a consensus on the abolition or retention of the British rebate and changes to farming subsidies. It is now likely that the financial perspective will not be approved until 2006, which is relatively late. The late approval of the EU budget frameworks could have negative consequences for Slovenia, particularly in connection with the readiness of procedures for disbursing money from the structural and cohesion funds as well as budget planning. The European Commission has proposed that pre-accession negotiations with Turkey begin on 3 October this year. There are several get-outs envisaged in negotiations with Turkey. It is not a given fact that Turkey will become a full member of the EU after negotiations, as it is also possible that it will be granted a special privileged status, or that negotiations will be suspended. No period has been set for the negotiations, but it is certain that Turkey will not join the EU before 2014, as this would have too great an impact on the budget, which is in place until 2013. The enlargement commissioner has also explained that the beginning of negotiations with Turkey has no bearing on the beginning of negotiations with Croatia, which is also a candidate for EU membership.

Oil prices fell in May, but reached record heights in June.

The average price for a barrel of Brent crude was USD 48 in May, but the favourable three-month trend of falling oil prices ended in June with the price rising sharply to approach USD 60 per barrel. The main factor in high prices this year has been demand outstripping supply. However the June reversal was attributed to fears that American refineries will be unable to meet the rising demand for oil in the second half of the year, and the consequent need for a rise in American imports. The EREFORE fluctuations in oil stocks in the USA cause a rise in prices any

time there is a decline in stocks. In the middle of June OPEC raised its official pumping quota by half a million barrels per day to 28 million barrels per day, although it has been pumping oil at close to full capacity of approximately 30 million barrels per day for some time now. The decision to raise the official quota therefore had no effect on prices. OPEC ministers say that the shortfall in oil supply is not being caused by insufficient pumping, but a bottleneck rises from refineries that are failing to process crude oil at sufficient speed. However OPEC is trying to mitigate rising prices with various (administrative) measures. These include a change in the basket used to calculate a barrel of OPEC oil, the abolition of the price band between USD 22 and USD 28 per barrel and talks on a further rise in the official quota by 0.5 million barrels per day. Other factors in the June rise in oil prices were the influx of speculators' money onto the oil market and the unrest in Nigeria.

2. REAL SECTOR

Economic Activity

Economic growth amounted to 2.6% in the first quarter of this year. In light of the preliminary indications (see for example May's Bank of Slovenia Monthly Bulletin), the continuation of the slowdown in economic activity, which began at the end of last year, was expected. The main engine of economic growth in the first quarter was exports, despite slightly slower growth than last year, with net exports accounting for one-half of economic growth (1.3 percentage points). The other components of GDP also grew more slowly than in the previous quarter, the exception being general government spending, which rose by 2.9% year-on-year. Investment spending recorded the largest slowdown in growth, with gross investments in fixed assets down 0.5% year-on-year, while there was a negative net contribution of 0.6 percentage points from the change in inventories. With inventories having built up significantly in the last two years, a decline was expected. A lower industrial output in the first quarter was also a probable consequence of such decline. Household spending in the first quarter recorded solid growth of 2.7%, still down slightly from last year's average of 3.5%. Lower household spending was also reflected in lower growth in imports of 6.6%. The quarterly GDP growth figure of 0.9% should be taken with caution, as the adjustment for extra working days meant that growth in the final quarter of last year (-0.4%) was slightly underestimated, and as a result growth in the first quarter of this year was slightly overstated. The implicit

GDP deflator continues to fall, and in the first quarter stood at 1.9% on an annual basis.

Growth in value added in manufacturing slowed significantly, while value added in financial intermediation continues to grow rapidly. While manufacturing recorded high average growth of 5.4% last year, the rate in the first quarter was just 1.1% year-on-year. Mining, the energy sector and the construction sector also recorded negative year-on-year growth in added value, which can partly be attributed to poor weather conditions in the first quarter. High growth in lending and other forms of financial intermediation is being reflected in high growth in added value in the financial intermediation sector, which averaged 10.4% last year and 11.5% in the first quarter of this year on an annual basis. Some parts of the service sector also recorded solid growth in the first quarter: real estate and business services (3.2% year-on-year), retail (3.7%) and transport (4.0%).

After performing poorly in the first quarter industrial output rose by 3.7% year-on-year in April. Despite industrial output falling by 2.6% year-on-year in the first quarter of this year with one working day less, the April figures indicate that the slowdown in economic activity is not as pronounced as that

*From 2005 on data on trade and Hotels and restaurants is available only in real terms and working day adjusted

figure suggests. The automotive industry (17.0%), the chemical industry (8.1%) and the rubber industry (7.2%) recorded the most rapid growth in the first four months of this year. The impulse trend indicates that the current rate of monthly growth in industrial output was again negative in April, although the monthly dynamics of contraction has been reduced constantly since February. The seasonally adjusted figures using the Tramo-Seats method present a slightly better picture, with industrial output having shown a rising trend in both March and April. In terms of the purpose of use, production of intermediate goods fell by 1% year-on-year in April, while there was encouraging growth of 7.9% in production of capital goods and 8.3% in production of consumer goods. Inventories of consumer goods fell on average by 1.9% year-on-year this year to April. By contrast, inventories of capital goods (a rate of 8.3% on average in the first four months of the year) and inventories of intermediate goods (39.5%) are continuing to grow, the latter comprising fuels (growth rate of 41.4%) and commodities (growth rate of 39.0%).

For the moment indicators of activity in other sectors point to an improvement in the outlook for the second quarter. Year-on-year volume growth in retail sales was 8.3% in April and 8.9% in May, which points to increased household spending. Particularly prominent this year has been the high growth in trade in textiles and clothing, which has fluctuated around 20%. After low growth in the first four months of the year, there was again an increase in car sales in May, the year-on-year rate reaching 16.7%. April saw a significant strengthening in construction, in particular housebuilding, where real year-on-year growth was 20%. Real year-on-year growth in revenues in the catering and hospitality sector was a solid 2.4% in March,

and slightly higher in April at 2.8%. The number of overnight stays in May was down 2% from the same month last year. The number of overnight stays made by tourists from the UK continues to rise. In the first five months of the year there were a little under 75,000 overnight stays made by tourists from the UK, which is equivalent to year-on-year growth of 28%, putting the UK in fifth place, behind Italy, Austria, Germany and Croatia.

Consumer confidence fell sharply in June, while the indicator of the general economic climate remained unchanged. The fall in consumer confidence was primarily the result of lower expectations about the Slovenian economy, which were probably connected to the publication of the figures for economic growth in the first quarter. Confidence in the retail sector has remained high since April, and is currently 2 percentage points above last year's average. However business survey remains pessimistic, with confidence in the manufacturing sector still 3 percentage points below last year's average.

The Labour Market

Growth in household income remains slow, with total wages being the fastest-growing component. Year-on-year growth in total household income in the first four months of the year amounted to 3.4%, or 0.7% in real terms. The relatively low real rate of growth is primarily the result of a year-on-year decline of 7.7% in other employment receipts in the first four months of this

Annual growth (%)	2002	2003	2004	2005 Apr.
SIT thousands				
Average gross wage	235.4	253.2	267.5	271.7
Average net wage	147.9	159.1	168.2	173.2
Average net wage	9.7	7.5	5.7	7.1
Real wage	2.1	1.8	2.1	4.4

- Average gross wage	9.8	7.6	5.7	4,7 (12)
- Average other expenditures	6.4	4.5	14.6	26,9 (12)
- Other taxes	11.4	10.4	7.0	8,5 (12)

Sources: Statistical Office of the Republic of Slovenia; Agency of the Republic of Slovenia for Public Legal Records and Related Services; Bank of Slovenia estimates.

Labour costs: average gross wages (Statistical Office of the Republic of Slovenia) + other labour compensation (Agency for Public Related Records and Related Services)+other taxes (MoF).

year; it should be noted that other employment receipts were the fastest-growing component of household income last year. Social transfers are also recording low year-on-year growth, having risen by 2.7% on average this year to April. By contrast growth in wage receipts strengthened further in April to 10.1% year-on-year, the rate being 8.4% over the first four months of the year.

Growth in average wages remains high. Year-on-year growth in the gross monthly wage was down slightly in April, but still reached 5.1%. With inflation low and economic growth moderate in the first four months of this year, year-on-year growth in wages, which averaged 5.6% in the first four months of the year, seems relatively high. Real growth in the gross average wage this year to April averaged 2.8%, slightly higher than economic growth in the first quarter. Because of the introduction of new tax legislation, nominal growth in the average net wage is slightly higher, the April figure being 7.1%. Since January 2005, the figures on wages have been gathered by the public records agency (the AJPES), the SORS then processing them. Owing to changes in methodology and a break in time series, it has not yet been possible to give detailed analysis of growth in wages or year-on-year comparisons in 2005 by individual sector. The SORS is expected to publish the figures for 2004 corresponding to the new methodology in July.

The active working population is increasing. Year-on-year growth in the active working population was 0.7% in April, the same as the average over the first four months of the year. This is primarily the result of the increase in employment at companies and organisations, which amounted to 1.1% year-on-year in April. The favourable employment trend in the small business sector is also continuing, with employment rising up 0.4% in April from the same period last year. This is the highest year-on-year growth in the small business sector since 2001. Employment is growing fastest in the car industry (year-on-year growth of 10.1% in April), with rapid growth also being recorded by real estate and business services (8.9%), catering and hospitality (5.1%), and financial intermediation (2.9%). Year-on-year growth in public sector employment continues to fluctuate around 2%, primarily on account of employment in the education sector and the health sector.

The seasonally adjusted figures indicate a rise in unemployment. Although the number of unemployed fell again in May to just under 90,000, the seasonally adjusted figures show that the current rate of growth was positive in the first five months of the year. Further evidence of rising unemployment was provided by the surveyed unemployment rate according to the ILO methodology, which stood at 6.9% in the first quarter, up 0.1 percentage points from the same period last year. The registered unemployment rate was 10.1% in April.

Competitiveness

The nominal effective tolar exchange rate as measured against a basket of foreign currencies has been depreciating this year, with the exception of March. It fell by 0.4% in April and 0.3% in May, taking the overall fall to May this year to more than 0.8%. With the euro/tolar exchange rate unchanged, the main factor in the tolar's fall was the rise of more than 5% in the dollar and of approximately 1.5% in the pound sterling. Despite this year's depreciation, the tolar was up 0.6% in the year to May. The tolar was boosted by the 5% fall in the dollar and the 1.3% fall in the pound sterling, but the gain was reduced by the rise of 0.5% in the euro. Preliminary figures for June show the dollar to have grown by more than 4% and the pound sterling by more than 2.2%, and the nominal effective tolar exchange rate is therefore expected to have depreciated by approximately 0.6%, the largest fall since February 2004.

The price competitiveness of the Slovenian economy improved in the first four months of the year. In April it improved by 0.5% as measured by consumer prices and 0.2% as measured by producer prices. To April this year price competitiveness improved by 0.3% as measured by consumer prices, and by four times this amount (1.2%) as measured by producer prices. In addition to the depreciation of 0.6% in the nominal effective exchange rate, another significant factor in the improvement of price competitiveness was the rapid convergence of domestic prices with foreign prices. Domestic consumer prices rose by just 0.3% more than foreign prices over the period, while domestic producer prices grew 0.6% more slowly

than the weighted average of foreign prices. Despite this year's improvement in price competitiveness, long-term comparisons still show a deterioration of 0.8% as measured by producer prices and 1.3% as measured by consumer prices.

Competitiveness as measured by preliminary estimates of unit labour costs has deteriorated this year. April's improvement of 0.3% did not have a significant impact on the long-term comparisons. Between December and April competitiveness as measured by unit labour costs deteriorated by 0.4%, the year-on-year rate averaging just under 6% in the first four months of the year. The most important factor in the deterioration in long-term competitiveness as measured by unit labour costs was that year-on-year growth in wages in the first four months of the year did not track the decline in manufacturing output, and was estimated to have outstripped the growth in productivity.

The terms of trade for Slovenian exporters have been deteriorating since the second half of last year. The largest year-on-year deterioration was recorded in the first quarter of this year, partly because of the relatively high baseline at the beginning of last year. Changes in exchange rates had a relatively modest impact on the deterioration in the terms of trade, their contribution averaging just over 0.4% in the first quarter. The largest factor in the deterioration in the terms of trade was the rise in industrial metal prices and oil prices. In euro terms metal prices rose by more than 10% year-on-year in the first quarter, while the price of a barrel of oil was up 42%. The decline of more than 10% in euro food prices and prices of agricultural products worked conversely, to improve the terms of trade. Given the current trends in commodities prices on world markets, the terms of trade are expected to improve slightly in the coming months.

1) Effective exchange rate: basket of 7 currencies of Slovenia's main foreign trading partners (excluding Croatia), weighted by the shares in Slovenian goods trade. From January 2002 onward three currencies (EUR, USD, CHF) are used in the calculation. 2) Real exchange rate: SIT exchange rate divided by relative (domestic/foreign) price ratio.

3. PRICES

Consumer prices rose by 0.1% in June, with year-on-year growth falling to 1.9%. The main features of June's price rises were a fall of 0.2% in prices of goods and a rise of 0.6% in prices of services. Prices of food and non-alcoholic beverages fell by 1.8% on average, while prices of housing equipment and alcoholic beverages fell by 0.2%. Prominent among the price rises were the rises of 6.1% recorded by package holidays and 0.6% recorded by prices of catering and accommodation services, while prices of refined petroleum products also rose by 2.5% on average. Despite the monthly rise in prices of services, year-on-year growth continues to fall, and stood at just 2.5% in June. Year-on-year growth in prices of goods also continues to fall gradually, and slowed to 1.6% in June.

The main factors in the movement of inflation in recent months have been seasonal changes in prices of food and services, and the uncertainty on the oil markets. Food prices continue to fall, with year-on-year growth falling below zero again in the last three months; the rate was -2.5% in June. The main factor in this is the seasonal decline in fruit and vegetable prices. The fall of 8.1% in fruit prices cut year-on-year inflation by 0.1 percentage points in June. Another factor in the decline in year-on-year inflation was June's slower growth in prices of package holidays, which was down 7.5 percentage points from last June, cutting year-on-year inflation by 0.2 percentage points. Given the seasonal nature of services, it is difficult to forecast whether this is a temporary effect, or a permanent effect for which there will be no compensation in the coming months. It will only be possible to assess these effects after the seasonal cuts in prices of package holidays, which are expected to occur in September. The movement of oil prices on the world market has been a more significant factor in inflation in the last year than seasonal effects. Prices of refined petroleum products have risen by approximately 15% on average in the last twelve months, accounting for more than half, 1.1 percentage points, of the inflation rate of 1.9%. In June alone they accounted for 0.2 percentage points. It is likely that the high cost of refined petroleum products is already having an adverse effect on the performance of companies, which is also being reflected in lower economic activity this year.

Tightened conditions in the macroeconomic environment and the international environment allowed for a continuation of last year's reduction in inflation in the first half of this year. Slower economic growth of 2.6% in the first quarter further widened the negative output gap, strengthening the pressures for lower inflation. In addition, with real gross wages growth slower than the productivity trend, companies have been able to slow the rise in the prices of their products, thus maintaining their competitiveness. On the demand side, despite faster growth in real net wages and credits, household spending stayed moderate. Similar unfavourable economic developments can be seen in Slovenia's most important trade partners, where slower economic activity is not allowing any increase in consumer price growth. Inflation in the eurozone is fluctuating around 2.0% year-on-year, and stood at 2.1% in June according to Eurostat's initial estimates. Compared to Slovenian 1.7% inflation as measured by the harmonised consumer price index, the latter was for the first time lower than the eurozone average. The nominal convergence of price aggregates is thus continuing, and is gradually approaching the convergence inflation criterion.

Despite the harsher economic conditions, the volatility and unpredictability of prices of seasonal products and oil shocks in the second half of the year could lead to a temporary rise in inflation. Although the current macroeconomic environment is still supporting the disinflation, there is

a risk that unpredictable seasonal movements and last year one-off stocks could lead to a rise in headline inflation. The uncertainty in oil prices remains the most important external shock on which economic policy has little influence, and is likely to cause another rise in prices of refined petroleum products in July, as the Slovenian government has little room to cut excise duties on refined petroleum products. There is a positive difference of 1.7 tolar on different types of petrol and of just under a tolar on diesel, while excise duties on heating oil are already at the minimum allowed level. In addition to oil shocks, in the coming months there are other risks regarding certain seasonal products and services, such as package holidays and seasonal food, prices of which fell sharply last summer. If this year's seasonal fall is smaller, a rise in year-on-year inflation can be expected in the summer.

After rising last year, growth in producer prices of manufactured goods fell to 2.6% in May. Year-on-year growth in producer prices has been falling rapidly since the beginning of the year. It fell by more than 2 percentage points over the first five months of the year to 2.6% in May. The faster growth in producer prices last year was merely of a temporary nature and was the result of one-off rises in prices of commodities, metals in particular, and consequently rises in prices of certain capital goods in May last year. This May's decline of 2.9 percentage points in year-on-year growth in prices of capital goods to 3.3% is thus primarily the result of the higher base from last year. Growth in prices of consumer goods remains slow and

in line with the consumer price index, having stood at 1.8% in May. Growth in prices of intermediate goods is also declining, reaching 3.1% in May. Within this category growth in commodities prices continues to fall, while growth in energy prices is gradually accelerating. Year-on-year growth in the former fell to 4.1% in May, while growth in the latter rose to 1.3%. In addition to base effects, the lower growth in producer prices is probably also the result of this year's slowdown in economic activity inside and outside Slovenia.

4. PUBLIC SECTOR

On 21 June the National Assembly approved the revised national budget for 2005. The revised budget envisages a rise in both revenues and expenditures from the previous budget for 2005. General government revenues as measured by the national methodology are expected to rise by SIT 63.9 billion to SIT 1,683 billion (25.6% of GDP), primarily on account of higher non-tax and tax revenues and higher inflows from the EU budget. General government expenditures are expected to rise by SIT 43.7 billion to SIT 1,775 billion (27% of GDP), mainly as a result of higher transfers. This entails a cut in deficit from SIT 112 billion (1.7% of GDP) to SIT 91.9 billion (1.4% of GDP). In addition to the revised budget, the National Assembly also adopted a new national budget implementation act and the pension and disability insurance institute and health insurance institute debt takeover act.

In the first six months of the year the government issued bonds in the amount of SIT 295 billion. June saw the third issue of 5-year government bonds and the sixth issue of 11-year government bonds in a total amount of SIT 45 billion. Some of the money borrowed in the sixth issue of 11-year bonds will be earmarked for government debt management, with part of the principal of the RS06 bonds being repaid early.

Source: Ministry of finance. Government expenditures for social security contributions are not excluded in consolidation.

Revenues

Growth in revenues slowed in the first quarter to 2.1% in real terms. General government revenues rose by 4.7% year-on-year in nominal terms between January and March. Preliminary figures for May indicate a year-on-year slowdown in nominal revenues. The main factors increasing revenues were VAT revenues, social security contributions and higher revenues from the EU budget. The main factor decreasing revenues were non-tax revenues, which were above-average last year, owing to revenues of a one-off nature.

Labour taxes grew by 2.4% in real terms in the first five months of the year. The movements within this group of taxes vary considerably, particularly because of movements in wages and changes in tax legislation. While revenues from personal income tax remained at approximately the same level as last year in real terms, payroll taxes rose by 1.9% in real terms and social security contributions rose by 3.5%.

In May revenues from VAT were higher than in March and April, but were still lower than those generated in the previous few months. VAT revenues averaged almost SIT 60 billion each month between last November and this February, then fell to approximately SIT 35 billion in March and April, before rising to SIT 48 billion in May. Excise duties in the first five months of the year were up 4% in real terms from the same period last year. Excise duty payments on tobacco and fossil fuels were higher. In May, excise duties were raised twice. The government raised excise duties on fuels at the beginning of

May when the oil price fell, and raised excise duties on unleaded petrol and gas oil at the end of May. In June the Government cut the latter twice, which will lead to a fall in revenues from excise duties in the national budget.

Revenues from taxes on international trade are again the fastest falling tax revenue source this year. Inflows from taxes on international trade fell by 73.5% year-on-year in real terms in the first five months of the year. The fall is the result of Slovenia joining the European Union.

Expenditures

General government expenditures grew faster than revenues in the first quarter of 2005. Growth in expenditures was stronger in the first two months of the year, but slowed slightly in March. Expenditures rose by 6.1% in real terms in the first quarter, or by 8.9% in nominal terms in comparison with the same period last year. The main factors in the rise were expenditure on subsidies, and high payments into the EU budget at the beginning of the year in particular, the payments not having begun until May last year.

Wage expenditure and expenditure on goods and services were higher year-on-year in real terms in the first quarter. Wage expenditure between January and March 2005 was up 3% in real terms, with wage expenditure on employees at state bodies and local authorities rising fastest. Expenditure on goods and services rose by 0.9% year-on-year in real terms in the same period.

Current transfers rose by 3.1% in real terms in the first quarter. Growth in transfers was strongest in the first two months of the year, at 7.2% in real terms. Expenditure on subsidies recorded growth of 10.8% in real terms in the first quarter, with farming subsidies having been paid out in January.

Transfers to households in the first quarter were up 2.1% in real terms on the same period last year. The fastest rises were recorded by family benefits and parental benefit, while transfers for unemployment recorded the lowest growth, down 1.6% in nominal terms in the first quarter from the same period last year.

Expenditure on pensions in the first five months of the year was up 1.8% in real terms from the same period last year. Between January and May expenditures on pensions rose by 4.3% in nominal terms from the first five months of 2004. This rise reflects an increase in the number of pensioners, and also the two pension increases made this year. The number of pensioners was 1.7% higher year-on-year in the first five months of the year, with a 2.4% rise in the number of old age pensioners.

A new law on the public sector wage system came into force on 1 July. The new public sector wage system act includes an agreement on starting wage and basic wages in the public sector under which public sector wages will be raised by 2% this year. A payment of 0.5% this year will go on the remainder of the wage adjustment, which will be aimed at eliminating pay discrepancies. The new act also ensures greater wage transparency in the public sector and prevents unjustifiably high wage and bonus payments to managers.

Source: Ministry of finance.

Slovenia's public debt rose by SIT 97 billion in the first quarter of this year to stand at 25.8% of the estimated GDP. The public debt in the first quarter was 6% up from last year. Within the public debt, the internal debt rose by SIT 99 billion, while the external debt fell by SIT 2 billion. The external debt remains primarily denominated in euros, while the internal debt is in tolar. The proportion of total public debt accounted for by external debt, fell by 2.5 percentage points in one year.

Public debt will increase owing to the takeover of the debt of the Pension and Disability Insurance Institute and the Health Insurance Institute. The National Assembly adopted the pension and disability insurance institute and health insurance institute debt takeover act in June. On 1 July the government will assume the debt of the pension and health treasuries in the amount of approximately SIT 45 billion, or 0.7% of GDP.

The volume of guarantees stood at 9.1% of GDP at the end of December. In 2004 the volume of guarantees issued rose by SIT 133 billion to stand at SIT 562 billion at the end of last December. Some 64.5% of debt with a government guarantee at the end of 2004 was denominated in euros, and 28.3% in tolar. In terms of sector, last year more than one-half (56.2%) of the debt with a government guarantee was for real

estate, leasing and business services, 16.3% was for financial intermediation and 13% was for transport, warehousing and communications.

5. BALANCE OF PAYMENTS

Current Account

The small deficit in April saw a surplus maintained in the current account over the first four months of the year. April's current account deficit was EUR 1.6 million, compared with EUR 77 million in the same month last year. The small deficit in April took the surplus over the first four months of the year to EUR 14 million. The year-on-year improvement in April's current account results also brought about an improvement in the long-term results. The cumulative 12-month current account deficit fell from EUR 260 million in March to EUR 182 million in April, equivalent to 0.7% of GDP, and was EUR 56 million less than the deficit recorded in 2004. With no change in net income, the fall in the deficit in trade in goods by more than one-half was the main factor of improvement in the current account, while the slightly smaller surplus in trade in services and in particular the net outflow in transfers acted to widen the deficit.

The current rate of growth in exports of goods and services strengthened in April, while that of imports continued to decline. Exports of goods and services in April were up 9.8% year-on-year at EUR 1,414 million, while imports were up 2.6% at EUR 1,419 million.

Exports of goods and services totalled EUR 5,339 million in the first four months of the year, up 10.5% from the same period last year, while imports were up 7.8% at EUR 5,264 million. Exports

*until March

growing faster than imports led to a year-on-year improvement of just under EUR 130 million in the results of trade in goods and services.

After stalling in March, year-on-year growth in exports of goods strengthened in April, while imports declined. Exports of goods totalled EUR 1,179 million in April, up 11.5% year-on-year, while imports totalled EUR 1,239 million and were down 1.2% on the same month last year. Coverage of imports by exports improved by 11 percentage points year-on-year to 95%. The results of trade in goods also improved in line with this movement. The deficit of EUR 60 million was less than one-third that recorded in the same month last year.

The cumulative deficit in trade in goods in the first four months of the year reached EUR 247 million. This result breaks down into a deficit of EUR 683 million in trade with other EU member-states, and a surplus of EUR 436 million in trade with non-EU-members.

The largest rise in the first quarter in exports to Slovenia's most important trading partners was recorded by exports to France, which were up 94%. Exports to France have been strengthening since the third quarter of last year, as a result of increased car production at Revoz. Exports to France also

Source: Bank of Slovenia

accounted for more than two-thirds of the overall increase in exports of goods to EU member-states, and together with exports to Italy for more than 91%. Growth in exports to Austria was relatively weak at just 3%, while exports to Germany fell by 4.2%. Among the new EU member-states, exports to Poland and Hungary were up slightly more than 7%, while exports to the Czech Republic recorded the largest increase of 27%. On the import side, the largest increases were recorded by imports from Austria (41%) and imports from Germany and Italy (just over 12%). High year-on-year growth was also recorded by imports from Spain (91%) and the Netherlands (82%), while imports from France fell by more than one-quarter. Growth in imports from the new member-states was modest or even negative, with the exception of Hungary, from which imports rose by 61%.

Year-on-year growth in exports to other former Yugoslav republics in the first quarter was down just under one-third from last year's average, while the rate for imports more than tripled. Exports in the first quarter rose by 10% year-on-year, the largest rises of just under 20% and just over 17% being recorded by exports to Serbia-Montenegro and Croatia respectively. Exports to Bosnia-Herzegovina fell by 8%. For the second successive year exports to Macedonia are falling, and were down 6% in the first quarter. Given last year's low baseline, imports have grown by 67% this year. Exports to the countries of the former Soviet Union were up 29%, while imports were down 19%. Exports to Russia, Slovenia's most important trading partner among these countries, were up 21%.

Year-on-year growth in exports in volume terms strengthened, while the rate for imports stagnated. Exports of goods grew by 11.4% in the first quarter of this year in volume terms, compared with 10.8% in the same period last year. The largest increase was in exports of consumer goods, up just under 20%, with exports of intermediate goods rising by 10% and exports of capital goods declining by just under 3%. The changes on the import side were much greater. Total imports rose by just under 1% year-on-year in volume terms. Imports of consumer goods were down 3.5%, while imports of capital

goods recorded the largest fall of 15%. With relatively modest domestic demand and favourable export demand at the beginning of the year, imports of intermediate goods rose by 5% in volume terms.

Owing to high oil prices on world markets the value of imported oil is rising rapidly. Imports of oil rose by 41% year-on-year in value terms in the first quarter of this year to EUR 197 million. Since April the dollar price of a barrel of oil on world markets has been rising, while the euro has been falling against the dollar. At the end of June the price of a barrel of oil had passed the USD 60 (EUR 50) mark. Even if the oil price falls in the coming months and remains at the level that it was in the first quarter, it will still have a powerful impact on the value of imports of goods. As the rise in the value of oil imports corresponds to the rise in the price of a barrel of oil in euros, the volume of oil imports is estimated to be similar to last year's volume. Should the volume of oil imports remain the same as last year, the value of oil imports at year-end would rise by approximately EUR 1.1 billion, which is just over EUR 300 million more than the value of oil imports over the whole of 2004.

The outlook indicators in business confidence surveys in June point to a deepening of business leaders' pessimism regarding future output for exports. Export orders in June were up 2 percentage points from May, but were still 3 percentage points below the April level. Export orders in the second quarter were down just under 4 percentage points from the same period last year. Directors' pessimism about growth in export demand increased further in June. Expectations regarding output for exports in June were down 5 percentage points from May, and were down 4 percentage points from last June.

With exports of services stagnating, growth in imports of services accelerated in April. Exports of services in the first four months of the year were up 7.2% year-on-year at EUR 830 million, while imports were up 11% at EUR 635 million. The result was a decline of EUR 6 million in the surplus in trade in services to EUR 195 million.

The largest rise in exports of services in the first four months of the year, was recorded by exports of miscellaneous business and technical services, which were up 16%. Owing to a decline of EUR 15 million in revenues from brokerage services, total revenues from other business services were down 13% on the same period last year. Above-average rises in revenues were also recorded by communications services (24%), travel (just under 13%) and transport (11%). On the import side, expenditures on business and technical services rose by 47%, while construction and assembly work rose by more than 24%, and travel imports also recorded an above-average rise. The slowdown in growth in imports of goods was also reflected in expenditure on transport services, which fell by 1.5% year-on-year in the first four months of the year.

Net labour and capital income recorded an outflow of EUR 10 million in April. This was one-fifth of the level recorded in the previous month, and EUR 2 million lower than the net outflow last April. With no change in net labour income and modest growth in capital expenses, income from capital rose by EUR 10 million, primarily through bank income from investments in foreign securities. There was a net inflow of transfers for the second successive month in April, in the amount of EUR 14 million. The main improvement in net revenues from transfers was recorded by net other transfers. There was again a net outflow in net official transfers in April in the amount of EUR 12 million, taking the net outflow in the first four months of the year to EUR 73 million, primarily because of payments into the EU budget.

Financial Account

In April Slovenia recorded a net outflow of EUR 72 million in its financial transactions with the rest of the world. Together with the first quarter, net financial outflows amounted to EUR 49 million or 0.6% of estimated GDP for the first four months of the year. The private sector recorded net inflows of EUR 108 million, while the main factor in the deficit in the financial account was the unregistered flows included in net errors and omissions (EUR 191 million). In part these also originated in the current account.

In private sector financial flows, borrowing abroad is growing faster than investments abroad. Financial outflows

in the first four months of the year amounted to EUR 896 million, up 1.6% year-on-year, while inflows rose to EUR 1,006 million, equivalent to growth of 26.4%.

Loans to the rest of the world are prevalent among April's private sector outflows, while other types of flow are significantly lower than in previous months. Loans to the rest of the world were primarily approved by banks (EUR 33 million), and to a lesser extent by companies (EUR 8 million). According to preliminary figures for May, lending abroad continued at a similar level at both banks and companies.

After rising in March, the flow of Slovenian direct investments abroad declined to EUR 16 million in April. Over the first four months of the year Slovenian investments abroad rose by EUR 140 million, EUR 28 million less than in the same period last year. Despite the fall the average monthly flow remains within the framework of last year's average.

After two successive months of record outflows of portfolio investments, these slowed in April. There were EUR 36 million of portfolio investments, significantly lower than the EUR 200 million recorded in the first quarter. The banking sector also made net sales of EUR 94 million of securities from

Signs: inflows or increases in liabilities (+), outflows or increases in claims(-). Increases in foreign exchange reserves (-), increases in debt (+)
Sourcer: Bank of Slovenia. 1) "Private sector" = non-government sector, thus including public sector organisations

its foreign exchange reserves. Initial figures indicate that there was no significant strengthening in portfolio investment abroad in either May or June.

This year companies have reduced their lending abroad via trade credits. Exporters approved EUR 20 million of trade credits for customers abroad in April, this low figure being partly seasonal in nature. A total of EUR 224 million of trade credits was granted in the first four months of the year, down just over 7% from last year. The volume of trade credits granted to affiliated companies also declined, from EUR 156 million last year to EUR 121 million this year.

After three years of rising outflows of foreign currency via households, this year there are the first signs of a decrease in this flow. Financial outflows via households totalled EUR 209 million this year to April, down EUR 30 million from the same period last year.

On the inflow side, after a slowdown at the very beginning of the year, the inflow of foreign loans to banks is again

strengthening rapidly. Banks' net borrowing via foreign loans totalled EUR 141 million in April, and EUR 308 million over the first four months of the year, equivalent to 12% year-on-year growth. A feature of banks' borrowing abroad this year is a higher proportion of short-term loans than in previous years: they accounted for almost 35% this year (almost one-half in April), which represents strong growth in comparison with 17% in the same period last year and 15% over the whole of 2004. Initial figures for subsequent months indicate a lower inflow of foreign loans in May and an inflow of more than EUR 0.5 billion in June, almost entirely in long-term loans in both months. Companies' extensive inflow of foreign loans in April was equal to their repayments, so that there was no change in net borrowing abroad by the corporate sector. Companies have not taken on additional borrowing abroad this year, with the exception of EUR 139 million in February.

The financing of imports with trade credits has also been declining this year. Trade credits received totalled EUR 43 million in April and EUR 70 million in the first four months of the year, just 41% of the comparable inflow in the first four months of last year. There have been changes in the regional structure, primarily in favour of new EU member-states. Last year the proportion of trade credits for Slovenia that they account for rose from 7% to 9.2%, and is being maintained at the same level this year. The rising proportion accounted for by these countries is not just a consequence of the lower volume of trade credits received, but also actual growth: trade credits received from new EU member-states rose from EUR 166 million last April to EUR 209 million at the end of 2004 and to EUR 220 million this April.

The inflow of foreign direct investment totalled EUR 54 million in April. The majority of April's investments, EUR 43 million, were of a debt nature, with equity investments and estimated reinvested earnings totalling just EUR 5 million each. Owing to the decline in foreign investments in the first two months of the year, the net inflow of foreign investment in the first four months of the year is still negative (EUR 28 million).

Portfolio investments by non-residents strengthened further in April. Non-residents invested most heavily in government debt securities, the total being EUR 48 million. May saw the repayment of eurobonds in the amount of EUR 500 million, with part of the revenue, approximately EUR 125 million

according to initial figures, being reinvested by non-residents in government bonds. Foreign portfolio investments in the private sector totalled EUR 17 million in April, taking the total to EUR 70 million in the first four months of the year.

Deposits by non-residents at domestic banks fell in April, having previously risen for three months. The net inflow of deposits by non-residents totalled EUR 555 million in the first quarter, but fell by EUR 99 million in April.

With the current account in balance, April's deficit in the financial account brought a reduction of EUR 74 million in foreign exchange reserves. Total foreign exchange reserves stood at EUR 7,515.3 million at the end of the month. The indicator measuring sufficiency of foreign exchange reserves fell by 3.6 percentage points to 124%. The rise in short-term debt by maturity accounted for 2.8 percentage points of this fall, with the decline in foreign exchange reserves accounting for the remaining 0.8 percentage points. Total foreign exchange reserves fell by a further EUR 402 million in May, primarily owing to eurobonds maturing.

External Debt

With borrowing abroad rising, the external debt grew by EUR 218 million in April. The key factors in the rise in external debt were the inflow of loans to banks and investments by non-residents in government debt securities, while deposits by non-residents acted to lower external debt. The gross external

debt stood at EUR 16,531 million at the end of April, up EUR 1,134 million from the end of last year. Banks accounted for more than 70% of the rise in debt (30% via foreign loans and 41% via deposits by non-residents), with the government accounting for almost 9% and companies and other financial organisations accounting for 17%. The remaining 4% represents the increase in liabilities to affiliated companies abroad.

Short-term debt by maturity rose by EUR 134 million in April to EUR 6,059 million. The rise came from the greater volume of foreign loans maturing in the next 12 months (short-term loans are included in full in this category), while deposits by non-residents acted to reduce the debt. May's repayment of general government debt in the amount of EUR 500 million will significantly reduce both the short-term debt and the total external debt. June's high inflows of foreign loans to banks and non-residents' investments in government bonds will again bring a rise in the gross external debt and total foreign exchange reserves of almost EUR 700 million, but the effect on short-term debt by maturity will be much lower, i.e. merely that portion of new long-term debt that will be serviced in the next 12 months. These major transactions will bring about an improvement of approximately 14 percentage points in the indicator measuring sufficiency of foreign exchange reserves in the coming months.

6. MONEY AND CREDIT

The temporary stalling of growth in M3 is the result of the repayment of government eurobonds abroad. In the first five months of the year banks increased their domestic investments by SIT 399.4 billion (compared with SIT 212.0 billion in the same period last year), while net foreign assets (NFA), which shows the contribution made by balance of payments flows to growth in M3, fell by SIT 287.2 billion (compared with SIT 129.7 billion). The fall in NFA was to a great extent the result of the increase in portfolio investments abroad, which amounted to SIT 62 billion this year to April. Investments in mutual funds have slowed since March, amounting to just over SIT 2 billion per month, one-third of the monthly average last year. NFA fell by SIT 120.3 billion in May, primarily as a result of the repayment of government eurobonds abroad.

Lending to the private sector continues to strengthen gradually. The rise in lending to the private sector amounted to SIT 241.6 billion in the final five months of last year, but SIT 297.8 billion in the first five months of this year. Lending to companies and other financial organisations rose by SIT 224.4 billion (compared with SIT 181.3 billion in the final five months of last year), while lending to households rose by SIT 73.5 billion (compared with SIT 60.4 billion). General government borrowing totalled SIT 101.5 billion in the first five months of the year, while the government made net repayments of SIT 11 billion in the final five months of last year. Year-on-year growth in domestic investments continues to gradually strengthen, having risen from 19.5% last December to 23.9% this May. Provisional figures show lending to have remained relatively strong in June.

The proportion of lending in foreign currency continues to rise. The proportion of total lending accounted for by foreign currency lending was 62.2% in the final quarter of last year, 74.8% in the first quarter of this year, and 88.4% in April and May. Companies continue to borrow most heavily in foreign currency, while households do so to a lesser extent. This year to April the government made net repayments (of SIT 2.7 billion) of foreign currency lending, while in May it borrowed SIT 19.7 billion net. Year-on-year growth in foreign currency lending rose from 46.4% last December to 55.3% this May. This year to May non-bank sectors had borrowed SIT 36.3 billion

via short-term tolar loans and SIT 23.7 billion via long-term tolar loans. Year-on-year growth in long-term tolar loans fell from 13.7% in December to 12.3% in May, while year-on-year growth in short-term tolar loans rose from 5.1% to 5.9% over the same period.

Total corporate lending remains at virtually the same level as at the end of last year. The rise in total domestic and foreign lending to companies amounted to SIT 191.4 billion in the final four months of 2004, and SIT 179.9 billion in the first four months of this year. Domestic corporate lending slowed in May, and in June according to provisional figures, with a rise in lending of just SIT 25.6 billion in May. Year-on-year growth in domestic corporate lending rose from 19.9% last December to 25.8% this May.

Companies did not take on net borrowing abroad in March or April. The proportion of total loans accounted for by loans from abroad stood at 39.1% in the final quarter of last year, compared with 15.5% in the first four months of this year. With the exception of February, companies have made net repayments abroad every month this year, the net borrowing totalling just SIT 27.8 billion.

Household lending was seasonally low at the beginning of the year, but has been strong since March. The rise in household lending amounted to SIT 13.6 billion in January and February, but SIT 59.9 billion between March and May. This year to May foreign currency lending accounted for more than 40% of household lending, with the remainder being in the form of long-term tolar lending. Year-on-year growth in total

household lending rose from 21.1% last December to 24.2% this May. The largest rise was recorded by foreign currency lending, which was up more than 500% over one year, partly because of the low baseline.

The government made net repayments in the final months of last year, but has been a net borrower this year. In the final five months of last year the government made net repayments of SIT 11.0 billion to banks, but borrowed SIT 101.5 billion net in the first five months of this year. This year the government has primarily borrowed from banks via securities issues (SIT 87.0 billion), and to a lesser extent via loans (SIT 14.5 billion). The government primarily borrowed in May in order to repay eurobonds to the rest of the world.

Growth in M1 has been slowing since the beginning of the year. This year to May M1 was up SIT 35.9 billion, with cash having risen by SIT 7.0 billion and demand deposits by SIT 28.9 billion. Year-on-year growth in M1 fell from 27.8% last December to 26.3% in April and 23.7% in May. This trend represents a normalisation after strong growth in M1 at the end of last year, which was the result of seasonal factors (high consumption) and relatively high household income, and is in line with the slowdown in private spending.

Growth in the broad money aggregates is gradually increasing. Year-on-year growth in M2 and M3 has risen since the final quarter of last year: the M2 rate rose from 4.0% in December to 7.5% in April while the M3 rate rose from 6.8% to 8.2%. With the government repaying eurobonds, in

May year-on-year growth in M2 fell to 5.4% and M3 to 6.4%. Approximately two-thirds of the eurobond repayment was financed by a reduction in government time deposits at the Bank of Slovenia, while one-third was financed by reduction in government foreign currency deposits at the Bank of Slovenia and by borrowing from banks.

In recent months the rise in tolar time deposits has strengthened, while foreign currency deposits have recorded almost no increase. Tolar time deposits at banks rose by SIT 59.6 billion between March and May, while foreign currency deposits rose by SIT 7.1 billion. Year-on-year growth in tolar time deposits rose from -7.3% last December to 0.6% this May. Over the same period year-on-year growth in foreign currency deposits fell from 13.9% to 8.6%. The growth in tolar time deposits and decline in foreign currency deposits is probably the result of the stable exchange rate and expectations of a gradual rise in deposit rates.

Of the components of tolar time deposits, since the middle of April it is primarily those with a maturity of up to one month that have been increasing. Deposits with a maturity of up to 30 days rose by SIT 38.2 billion in May, but fell again in June. Over the longer term, the fastest-growing deposits are still those with a maturity of 91 days to one year, which rose by SIT 26.4 billion between March and May. Long-term deposits have remained unchanged in recent months.

The average maturity period of tolar deposits remained almost unchanged. M1 fell as a proportion of M2 from 36.1% last December to 37.1% this May, while the proportion of M2 accounted for by long-term tolar time deposits fell from 11.2% to 10.7%.

7. BANKING SECTOR

Year-on-year growth in the banking system's total assets is rising, and reached 15.9% at the end of May. Total assets rose by SIT 441 billion to SIT 6,086 billion this year to May. The largest contribution to the rise in total assets came from lending to non-bank sectors, which is up SIT 310 billion this year. The net increase in corporate lending (SIT 199.5 billion) accounts for just under two-thirds of this year's increase in lending, with household lending, which had risen by more than SIT 74 billion by the end of May, accounting for close to one-quarter. On the liabilities side, the majority (55%) of the rise in total liabilities came from the increase in liabilities to foreign banks, and just one-third from deposits by non-bank sectors, which indicates that banks are continuing to finance the majority of the increase in lending through increased borrowing from banks abroad. The current rate of growth in total assets rose by 0.3 percentage points from April to stand at 1.4% in May.

Medium-sized banks were prominent in terms of the current rate of growth in May. The total assets of medium-sized banks rose by 3.1% in May, with small banks recording a rise of 1.0% and large banks a rise of 0.8%. Major differences between the year-on-year growth rates of the different groups of banks remain, with medium-sized and small banks growing at approximately 25% year-on-year, and large banks at just 9.8%.

Source: monthly bank figures. 1) All securities, including bills at Bank of Slovenia. 2) Cash, fixed asset and accrued income and prepayments. 3) Liabilities towards domestic and foreign banks and the Bank of Slovenia. 4) For potential and general risks combined.

The market shares of the largest banks continue to gradually decline. The market shares of the five largest banks in terms of total assets and in terms of the various types of lending have fallen by between 2.9 and 4.2 percentage points over the last year. The market share of the five largest banks (the CR5) in terms of total assets amounted to 64.0% at the end of May. It fell by 2.9 percentage points over the preceding 12 months, and by 0.9 percentage points this year. The five largest banks account for 63.1% of all lending to non-bank sectors, this proportion having fallen by 3.4 percentage points in the last year, and by 0.7 percentage points this year. The proportion of corporate lending accounted for by the five largest banks fell by 4.2 percentage points in the preceding year (by 1 percentage point this year) to 63.7% at the end of May. The proportion of household lending accounted for by the five largest banks fell by 1.1 percentage points this year, and by 3.5 percentage points in the last year, to 64%.

Lending to non-bank sectors remains at a high level, while household lending accelerated further in May. The net flow of lending to non-bank sectors this year to May averaged more than SIT 62 billion each month (SIT 70.9 billion in May), SIT 20 billion more than last year's average net increase. With an increase of SIT 30.9 billion in corporate lending in May, of which other financial organisations accounted for SIT 10.4 billion, a large factor in the increase in lending to non-bank sectors was high household lending, which increased by SIT 21.4 billion in May, while government borrowing and borrowing by the rest of the world were also positive for the second successive month. Household lending has been particularly high in the last three months. The net increase in lending to this sector in May was almost double the high monthly average for net lending last year (SIT 11.3 billion). Year-on-year growth in lending to non-bank sectors rose by 0.8 percentage points in May to 23.3%, with the rate of 23% recorded by corporate lending (including other financial organisations) similar to April, and the rate recorded by household lending rising by almost 1 percentage point to 24.3%.

Foreign currency lending continues to prevail over tolar lending. Foreign currency lending accounted for just under

INCOME STATEMENT	2005			y.o.y.

Profit after tax	31.3	36.8	...	...

82% of net lending to non-bank sectors this year to the end of May. Companies made net repayments of SIT 7.9 billion of tolar loans from banks in April and May, while taking on net foreign currency borrowing of SIT 62.6 billion from banks. By the end of May, foreign currency lending had accounted for 90% of this year's total increase in corporate lending by banks. Personal foreign currency lending is also growing in importance, with foreign currency accounting for 40% of total net household lending this year. The prevalence of foreign currency lending is also bringing a constant increase in the proportion of total lending stock accounted for by foreign currency lending. The proportion of lending to non-bank sectors accounted for by foreign currency lending in the year to the end of May rose by 7.5 percentage points to 38.6%, with the proportion of corporate lending in foreign currency rising by 7.9 percentage points to 49.4% and the proportion of household lending in foreign currency by 4.8 percentage points to 6.3%. Banks increased their investments in securities in May. The largest increase of SIT 19.9 billion was in government securities, with increases of SIT 12.1 billion in Bank of Slovenia securities and SIT 10.5 billion in other securities.

Growth in deposits by non-bank sectors strengthened in May, but was still just over 7 percentage points behind year-on-year growth in total assets. Banks' borrowing from banks abroad is strengthening. The main factors in the increase of SIT 33.6 billion in deposits by non-bank sectors were household deposits (SIT 27.7 billion) and corporate deposits (SIT 16.4 billion), while general government deposits fell. There was a particular increase in demand deposits. Financing via foreign banks strengthened in May to SIT 34.7 billion. This year such financing accounts for close to 55% of the increase in total assets, with financing via deposits by non-bank sectors accounting for 33.4%. Year-on-year growth in liabilities to foreign banks of 51% year-on-year is bringing a rise in the proportion of banks' total liabilities that they account for and a fall in the proportion accounted for by deposits by non-bank sectors. The proportion of deposits by non-bank sectors accounted for by demand deposits rose by 0.7 percentage points from April to 35.2% in May, while the proportion accounted for by long-term deposits is now just over 7%. Foreign currency deposits accounted for 33.7% of all deposits by non-bank sectors in May, similar to the April figure.

Net interest income in the first five months of the year exceeded that in the same period last year. Net interest income is continuing to record positive growth, albeit weak, while non-interest income was up just 3.4% from the first five months of last year owing to low net financial transactions (-25.2% year-on-year growth). Growth in net fees and commissions rose to reach 9.2% at the end of May. The increase in gross income was thus relatively modest (2.2%).

Growth in operating costs remains modest, while costs of provisions are slightly higher than the same period last year. In terms of the disposal of banks' gross income, year-on-year growth in operating costs remains between 4% and 5%, similar to previous months, while within this labour costs are growing at 5.3%. Costs of provisions are also recording positive growth. With the increase in banks' gross income very low, these trends are bringing a reduction in profits in comparison with the same period last year.

Banks' margins are decreasing. The interest margin on interest-bearing assets stood at 2.6% for the period to the end of April, down 0.3 percentage points from the same period last year, while the interest margin on total assets over the last twelve months is still showing a declining trend, having fallen below 2.6% by May. The non-interest margin has remained below 1.8% in the last three months, taking the overall financial intermediation margin close to 4.3%.

Banks generated pre-tax profit of SIT 25.3 billion in the first five months of 2005, down SIT 3.3 billion from the same period last year. Return on assets is down 0.2 percent-

age points this year at 1.1%, while return on equity is down 2.7 percentage points at 13.8%. The proportion of banks' gross income accounted for by net interest had fallen by 0.5 percentage points from last year by the end of May to 60.5%. Owing to the moderate growth in costs of provisions, operating costs as a proportion of banks' gross income increased by 1.4 percentage points to 59.8%. Coverage of operating costs with non-interest income was down 0.8 percentage points at 63.6% at the end of May. With total assets growing faster than operating costs, the latter fell as a proportion of the former to stand at 2.4% by May, down 0.3 percentage points from the same point last year.

B. MONETARY POLICY

1. EXCHANGE RATE

Excess supply of foreign exchange on the foreign exchange markets was growing in the second quarter of this year. It amounted to EUR 94 million in April, EUR 103 million in May, and EUR 140 million in June according to provisional figures. The cumulative excess supply of foreign exchange totalled EUR 215 million this year to May, while the foreign exchange markets were in balance in the same period last year. Despite the excess supply of foreign exchange, there was a fall of EUR 402 million in foreign exchange reserves in May (owing to repayments of government bonds issued abroad), and a fall of EUR 364 million this year to May, equivalent to 1.4% of estimated GDP.

The excess supply of foreign exchange on the spot market has strengthened in recent months. In May it amounted to EUR 289 million, the largest figure for a single month since March 2004. The largest net supply of foreign exchange came from non-residents in the amount of EUR 199 million. May's excess supply from non-residents exceeded the average monthly supply in 2004 by more than one-fifth, and the average excess supply from non-residents in the preceding four months by just under one-half. The excess supply from companies was less than in April at EUR 52 million. The net supply of foreign exchange from private individuals has been rising from month to month, reaching EUR 38 million in May, EUR 7 million higher than in 2004. Demand for foreign currency at exchange offices is lower than last year, and amounted to just EUR 13 million in May, down one-half from the same month last year.

With high net excess supply of foreign exchange on the spot market, net demand for foreign exchange on the forward market increased. Banks' net sales of foreign exchange amounted to EUR 173 million in May, four times the amount in the previous month. The majority of demand came from non-residents. Banks made forward sales of EUR 151 million of foreign exchange to non-residents, and sales of EUR 22 million to domestic companies. The volume of forward transactions concluded between banks and major domestic exporters is rising more than the actual realisation. In June banks concluded EUR 154 million of forward foreign exchange purchases for delivery in the next twelve months with domestic

companies. Companies hedge against the risk of the nominal appreciation of the tolar in this manner.

Transactions between banks and non-bank sectors are rapidly increasing the potential supply of foreign exchange on the market. In May the potential supply of foreign exchange on the market increased by EUR 173 million. It reached EUR 860 million this year to May, and was EUR 140 million more than the potential supply over the whole of 2004. The principal source of potential foreign exchange supply was foreign currency loans to non-bank sectors, primarily businesses. Banks' foreign currency claims rose by EUR 1 billion this year to May, and liabilities by EUR 148 million.

Transactions between banks and the Bank of Slovenia reduced the potential supply of foreign exchange on the market. In May banks increased the balance of foreign exchange swaps by EUR 86 million, and the balance of foreign currency bills by EUR 43 million. Overall the net potential supply of foreign exchange from transactions between banks and the Bank of Slovenia was reduced by EUR 43 million. In June the Bank of Slovenia made outright purchases of EUR 196 million of foreign exchange from banks.

The tolar has appreciated in nominal terms against the euro in the last two months under the influence of the excess supply of foreign exchange. The average exchange rate against the euro on the spot foreign exchange market was 0.01% below the central rate of SIT 239.640 to the euro in May, and 0.04% below it in June.

1) Basket/effective exchange rate: basket of 7 currencies of Slovenia's main foreign trade partners (excluding Croatia), weighted by shares in Slovenian goods trade. From January 2002 onwards three currencies are taken into account (EUR, USD, CHF). Sources: BoS, Statistical Office of the Republic of Slovenia and various foreign sources.

2. INTEREST RATES

The Bank of Slovenia finally made a change to the interest rates of its instruments on 8 April this year. It raised the foreign exchange swap rate and the refinancing rate by 0.25 percentage points to 1.5% and 3.5% respectively. The Bank of Slovenia's other tolar interest rates have remained unchanged since Slovenia joined the ERM II. The differential between the interest rate on 60-day tolar bills and the ECB refinancing rate remains 2 percentage points.

The interest rate on the interbank market in May and June was lower than in the previous months. The interest rate on the interbank market averaged 3.75% between February and April, but fell to 3.68% in May and remained at that level in June. The interbank interest rate fell by 1 percentage point over the period of one year. The interest rate on overnight deposits (SIONIA) fell from 3.75% in April to 3.65% in May, but by the end of June had risen again to its March level.

Quoted interest rates fell in May, but returned to their April levels in June. In May the SITIBOR rates fell by approximately 0.2 percentage points from their April levels to between 3.7% and 3.9%. In June these interest rates increased back to the April levels.

The interest rates on 1-month and 6-month treasury bills rose slightly in June, while those on 3-month treasury bills remained unchanged. The average interest rate at auctions of 1-month treasury bills fell from 3.72% in April to 3.64% in May, then rose again to 3.67% in June. The excess demand was 1.7 to 2.1 times supply in May, and 1.5 to 1.7 times supply in June.

The other interest rates at auctions of 3-month treasury bills remained unchanged in May and June at 3.73%, down very slightly from April. With excess demand lower, the June interest rate on 6-month treasury bills rose by 0.1 percentage points from May to 3.78%. The interest rate of 12-month treasury bills has remained unchanged for several months at 3.70%.

On 9 June the government released the third issue of 5-year RS60 bonds in the amount of SIT 24 billion and the sixth issue of 11-year RS59 bonds in the amount of SIT 21.2 billion. The average annual yields for all the accepted purchase bids were 3.746% for the 5-year bonds, and 4.013% for the 11-year bonds.

Banks' tolar interest rates remain unchanged. In June other declared interest rates on loans were unchanged from May: 6.79% for short-term corporate loans, 6.73% for consumer loans, 6.76% for long-term corporate loans and 6.78% for housing loans. Over a one-year period the aforementioned interest rates fell by between 0.5 and 0.9 percentage points, with long-term corporate loans recording the largest fall. Declared interest rates on tolar deposits also remained unchanged in June, having fallen by between 0.2 and 0.7 percentage points over one year. Interest rates on foreign currency loans and deposits (including those with a foreign currency clause) fell each month by up to 0.2 percentage points in May and June.

The interest rates realised on new consumer loans and housing loans fell in May. Interest rates on housing loans fell by between 0.13 and 0.16 percentage points, while those on

consumer loans fell by 0.2 percentage points. Interest rates on loans for investments rose by 0.2 percentage points in May.

- companies and other legal entities with a registered office in the Republic of Slovenia, except their branches abroad;
- branches of foreign companies entered in the Companies Register of the Republic of Slovenia;
- sole proprietors or natural persons, independently performing business activities as their prime occupation, with a registered office in the Republic of Slovenia or having permanent residence in the Republic of Slovenia;
- natural persons with permanent residence in the Republic of Slovenia;
- natural persons temporarily residing in the Republic of Slovenia holding a residential or working visa valid for no less than six months;
- diplomatic, consular and other representative offices of the Republic of Slovenia abroad financed from the Budget as well as Slovene citizens employed at these representative offices and their family members.

All other persons and entities shall be deemed non-residents.

Domestic sector is broken down to monetary and non-monetary sector.

Monetary sector consists of the Bank of Slovenia and commercial banks. Commercial banks (hereinafter "banks") are deposit money banks that accept sight deposits and have banking licenses granted by the Bank of Slovenia. Only domestic banks, owned by residents or non-residents, are included.

Non-monetary Sector is further divided into following sub-sectors: Non-monetary financial institutions, General Government, Individuals, Enterprises and Non-profit institutions.

Non-monetary financial institutions include Savings banks, Co-operatives and other financial institutions.

General Government comprises Central Government and Other General Government. **Central Government** mainly consists of the Budget. **Other General Government** contains local communities and entities established by General Government - institutions, funds, companies, clubs and other societies engaged in education, health, culture, social insurance, trade unions and other organizations.

Households (Individuals) include resident individuals.

Enterprises comprise firms in private or public ownership or control, except for those included in the General Government.

Non-profit institutions consist of all entities, not included in any other sector.

Characteristics of the data

Data present stocks on assets and liabilities at the end of the period.

Data on stocks nominated in foreign currencies are converted into Tolars using Bank of Slovenia end of period middle exchange rate.

Data in tables are not seasonally adjusted.

Table: Republic of Slovenia: general information

Table shows basic general data on Slovenia and its economy. In the "latest actual" column the latest available data for the current year are published. Data sources for the table are Bank of Slovenia, Ministry of Finance and The Statistical Office of the Republic of Slovenia.

1. MONEY AND BANKS

Last published data are preliminary.

Sectorization of banks' data as from April 30, 1999

For data from April 30, 1999 on a sectorization has been implemented according to **Regulation on Introduction and Implementation of Standard Classification of Institutional Sectors**, (hereinafter "SKIS") - Official Gazette 56/98. SKIS which implemented a national standard for economic sectorization is based on European System of Accounts 95 and is in accordance with System of National Accounts 93.

According to SKIS the sectors of the economy are: 1.) Non-financial corporations, 2.) Financial corporations (central bank, commercial banks, other financial institutions), 3.) General government, 4.) Households, 5.) Non-profit institutions serving households and 6.) External Sector (non-residents)

There has been no change regarding definition of *Non-resident*.

Domestic sector is broken down to monetary sector and non-monetary sectors.

Monetary sector consists of the Bank of Slovenia and commercial banks. Commercial banks (hereinafter "banks") are deposit money banks that accept sight deposits and have banking licenses granted by the Bank of Slovenia. Domestic banks, owned by residents or non-residents, are included.

Non-monetary Sectors are: Non-financial corporations, Non-monetary financial institutions, General government, Households, Non-profit institutions serving households.

Non-financial corporations are legal persons - market producers of goods and non-financial services.

Non-monetary financial institutions consist: of Savings banks, Co-operatives and *Other financial institutions*. *Other financial institutions* are: 1. Other financial intermediaries, except insurance corporations and pension funds (mutual funds, investment funds and financial leasing comp.), 2. Financial auxiliaries (securities brokers, stock exchanges) and 3. Insurance corporations and pension funds.

General government consists of: 1. Central government (administrative departments of state and central government agencies), 2. Local government (local administration, local agencies) and 3. Social security funds.

Households: resident individuals as consumers and resident individuals as sole proprietorships and partnerships being market producers and having no independent legal status. The data of the latter have been prior to April 30, 1999 included in the sector Enterprises.

Non-profit institutions serving households are clubs, political parties, trade unions, churches or religious societies, humanitarian and charity organizations, professional societies.

Table 1.1.: Monetary Aggregates

Table 1.1 shows stock data at the end of month for base money, monetary aggregates M1, M2 and M3, calculated according to the national definition and according to the harmonised definition of the European Central Bank (hereinafter: ECB).

The definition of base money is define as the sum of: *Banknotes in circulation, Banks' settlement accounts, Overnight deposit and Other deposits at the Bank of Slovenia* (Savings banks' settlement accounts, Savings banks' and Savings and loan undertakings' reserve accounts, transactional accounts of the Central and Local Government).

Data sources are banks' and Bank of Slovenia's bookkeeping data, which refer to the end of the month.

Calculation of monetary aggregates according to the national definition is shown on the liabilities' side of Table 1.2: Monetary Survey – Consolidated Balance Sheet of the Monetary System (See methodological notes referring to Table 1.2).

Harmonised monetary aggregates for Slovenia are calculated according to ECB's definition of harmonised monetary aggregates of euro area, which is evident from documents published on web pages of the ECB (<http://www.ecb.int>). Main differences between the two definitions of monetary aggregates are as follows:

- limited maturity of items included (harmonised aggregates include liabilities of up to 2 years only),
- equal treatment of the foreign exchange liabilities (which are, in harmonised aggregates, included into adequate items together with those in domestic currency),
- status of the monetary neutral sector (the central government in the harmonised aggregates has the status of a monetary neutral sector) and
- inclusion of the money market fund shares / units into M3.

Composition of harmonised monetary aggregates, as defined by the ECB is:

- HM1 contains *currency in circulation* and *overnight (sight) deposits*.
- HM2 includes beside HM1 also *deposits with agreed maturity of up to 2 years* and *deposits redeemable at notice of up to 3 months*.
- HM3 includes HM2, *repurchase agreements* and *debt securities with a maturity of up to 2 years*. *Money market fund shares / units* financial instrument, which is according to ECB's definition also part of HM3, will be included in calculation when such institutions appear in Slovenia.

HM2 and HM3 are, for the period prior to July 2002, partly calculated as estimation, because of the unavailability of relevant bookkeeping breakdowns.

Table 1.2.: Monetary Survey - Consolidated Balance Sheet of the Monetary System

Table 1.2 shows consolidated balance sheet of all banks' and Bank of Slovenia at the end of the month. Data for banks are aggregated.

Domestic assets consist of banks' and Bank of Slovenia's claims on General Government arising from succession to the former SFR Yugoslavia and the bank rehabilitation program, and claims from loans and securities on other non-monetary sectors. Claims from succession and the bank rehabilitation program represent: claims of the Bank of Slovenia on the Succession Fund of the Republic of Slovenia (on account of the former National Bank of Yugoslavia Dinar cash), counterpart claims for Bank of Slovenia liabilities to the International Monetary Fund, government guaranteed bank rehabilitation bonds, government bonds for unpaid foreign currency deposits and claims on the former National Bank of Yugoslavia for foreign currency deposits.

Other assets include fixed assets of banks and of the Bank of Slovenia and some other items (doubtful claims, etc.).

In September 2003, the liability part of the Table changed due to methodological changes in the calculation of monetary aggregates under the national definition, because of gradual harmonisation with the definitions of the European Central Bank (changes were made to all time series).

To aggregate M1, a vista Savings deposits at banks were added, and therefore, it consists of currency in circulation and demand deposits at banks (including a vista Savings deposits) as well as at the Bank of Slovenia.

To aggregate M2, Tolar restricted deposits and securities in Tolar including subordinated debt were added, so that the aggregate consists in addition to M1 also of Tolar time deposits at banks, and Government time deposits at the Bank of Slovenia and of Tolar securities.

To aggregate M3, other foreign currency liabilities to central government and securities in foreign currency were added, so that M3 consists of M2 and foreign currency deposits and securities at banks.

Other liabilities consist of capital and reserves of banks and of the Bank of Slovenia and also include some other items.

In the Table as from April 30, 1999 in conformity with SKIS, items of assets and liabilities to other general government mean assets and liabilities to both Local Government and Social Security Funds. By analogy, enterprises mean non - financial corporations and non - profit institutions serving households, and individuals mean households.

From July 31, 1996 onwards, the data for Komercialna banka Triglav are no longer included in banks' data due to its bankruptcy.

Foreign assets/Bank of Slovenia and *Foreign assets/Deposit money banks* were changed because of changes in Tables 1.3. and 1.4. for the period from April 2000 onwards.

Table 1.3.: Balance Sheet of the Bank of Slovenia

The Table shows the Bank of Slovenia's assets and liabilities at the end of month.

Foreign Assets consist of: foreign currency, deposits abroad (sight and time deposits, from April 2000 on also foreign exchange deposits held by BS on the basis of repurchase agreements) first class securities of foreign issuers, monetary gold, reserve position and SDR holdings at the International Monetary Fund and other claims. *Other claims* mainly include balances on fiduciary accounts and with international financial organization.

Because of consolidation of statistical and bookkeeping records in February 2003, *International monetary reserves* are not presented as subitem of Foreign assets. International monetary reserves are shown in Tables 3.12. and 1.9..

Claims on General Government consist mainly of net claims on the National Bank of Yugoslavia taken over by the Succession Fund of the Republic of Slovenia. Claims on the state budget, which are the counterpart of the succeeded liabilities to the International Monetary Fund, are also included.

Repurchase agreements include loans extended to banks based on securities and foreign currency (currency swap). From April 2000 on the amount of the foreign currency swap is shown as a part of the foreign assets of the Central Bank, because of the gradual permanent purchase of foreign currency from the part of Central Bank. In accordance to this are claims based on currency swap with domestic banks shown for the period up to March 2000 in the item *Repurchase* and thereupon in the item *Deposits*.

Other claims include some Bank of Slovenia's small deposits with banks and advance payments to the banks for repayments of Bank of Slovenia bills sold to other buyers through banks as agents.

General Government Deposits comprise deposits of Central Government budget.

Restricted deposits mainly result from deposits earmarked for import payments and deposits covering letters of credit, guarantees and credits taken abroad.

Money transfers in transit comprise money in transit.

Revision in time series caused changes in items *Deposits/Enterprises* and *Deposits/Nonmonetary financial institutions* for the period from February 1998 on. Whereas item *Deposits/Other demand deposits*, which represents the sum the mentioned two remains unchanged.

Table 1.4.: Balance Sheet of Deposit Money Banks

The Table summarizes data on assets and liabilities of banks at the end of the month.

Demand deposits comprise giro accounts of enterprises and non-profit institutions, General Government, non-monetary financial institutions and giro and current accounts of households (see Table 1.6.).

Savings deposits include short and long-term tolar savings deposits of households (see Table 1.6.).

Time deposits consist of short and long-term time deposits of households, General Government, non-monetary financial institutions, enterprises and non-profit institutions (see Table 1.6.).

Restricted deposits represent deposits of enterprises and non-profit institutions, General Government and individuals to be used for money transfers to foreign countries or in cover of letters of credit, loans taken abroad or euro-checks, and can also be used for foreign currency exchange office transactions.

Note 1: In June 1996 foreign liabilities of banks for the undue foreign debt of former SFR Yugoslavia in the amount of SIT 49,027 million were taken over by the Government. Liabilities of banks to the Government were increased for the same amount. The banks decreased their foreign liabilities and claims on the Government for the part of matured allocated debt which they had been repaying to the government fiduciary account since January 1994 totalling SIT 18,078 million.

Bank of Slovenia's claims on and liabilities to banks are equal to the corresponding items in the banks' aggregated balance sheet with few exceptions: Item 'Reserves' (Giro and reserves accounts) on the assets side of banks' balance sheet is almost the same as item 'Deposits of banks' (Giro and reserves accounts, foreign currency deposits) on the liabilities' side of the Bank of Slovenia's balance sheet (Table 1.3.). Similar applies to items 'Liabilities to the banking system' arising from the Bank of Slovenia loans and 'Claims on domestic banks' based on loans in the Bank of Slovenia balance sheet (Table 1.3.). Discrepancies result from differences in accounting accuracy.

In February 2003 were items *Currency and Deposits* and *Loans from BS* diminished by the amount - claim i.e. liabilities based on currency swap of central banks with domestic banks, for period from April 2000 on. (More in Methodological notes for Table 1.3. - *Repurchase*). Total assets i.e. total liabilities were diminished accordingly.

Claims on and liabilities to domestic non-monetary sectors are shown in detail in Tables 1.5. and 1.6. Foreign assets and foreign liabilities are shown in detail in Tables 1.7. and 1.8.

Table 1.5.: Deposit Money Banks' Claims on Domestic Non-monetary Sector

The Table shows banks' claims resulting from loans and securities classified by domestic non-monetary sectors, which are also represented in Table 1.4. in item 'Claims on non-monetary sectors - Total'.

As from April 30, 1999 SKIS has been implemented in the sectorial distribution of the economy and therefore:

- the sector *Enterprises and non-profit institutions* comprises the data on SKIS Sectors *Non financial corporations* and *Non-profit institutions serving households*;
- the sector *Central government* comprises the data on SKIS subsector *Central government*;
- the sector *Other general government* comprises the data on SKIS subsectors *Local government* and *Social security funds*;
- the sector *Individuals* comprises the data on SKIS sector *Households*;
- the sector *Non-monetary financial institutions* comprises the data on SKIS sector *Other financial institutions*.

Marketable securities are long or short-term securities acquired and held by a bank with the intention of reselling them in the short term.

Investment securities are long or short-term securities acquired and held for yield or capital growth purposes and are usually held to maturity.

Table 1.6.: Deposit Money Banks' Liabilities to Domestic Non-monetary Sector

The Table shows banks' liabilities from deposits of domestic non-monetary sectors which correspond to the 'Liabilities to non-monetary sectors - Total' in Table 1.4.

As from April 30, 1999 SKIS has been implemented in the sectorial distribution of the economy and therefore:

- the sector *Enterprises and non-profit institutions* comprises the data on SKIS Sectors *Non financial corporations* and *Non-profit institutions serving households*;
- the sector *Total General government* comprises the data on SKIS sector *General government*;

- the sector *Individuals* comprises the data on SKIS sector *Households*;
- the sector *Non-monetary financial institutions* comprises the data on *Savings banks* and *Savings cooperatives* as well as the data on SKIS sector *Other financial institutions*.

Table 1.7.: Deposit Money Banks' Claims to Non-residents

The Table shows banks' claims to non-residents by currency- Tolars and foreign currencies. Deposit Money Banks' Claims to non-residents are shown in Table 1.4. in item 'Total – Foreign assets'.

In February 2003 was item *Deposits* diminished by the amount – claim based on currency swap of domestic banks with central banks, for period from April 2000 on. (More in Methodological notes for Table 1.3. – *Repurchase*). Item Total claims on non-residents was diminished accordingly.

Table 1.8.: Deposit Money Banks' Liabilities to Non-residents

The Table shows banks' liabilities to non-residents broken by currency- Tolars and foreign currencies. Deposit Money Banks' Liabilities to non-residents are shown in Table 1.4. in item 'Total – Foreign liabilities'.

Table 1.9.: Bank of Slovenia 10-day balance sheet

In April 2002 the definition of base money has been changed to the sum of: *Banknotes in circulation*, *Banks' settlement accounts*, *Overnight deposit* and *Other deposits at the Bank of Slovenia* (Savings banks' settlement accounts, Savings banks' and Savings and loan undertakings' reserve accounts, transactional accounts of the Central and Local Government).

The data time series have been recalculated according to the change in definition.

The off balance items *Buy/sell foreign exchange swap* and *Sell/buy foreign exchange swap* are from April 2003 on are included in the table.

Bank of Slovenia 10-day balance sheet together with off balance items is in terms agreed for publication shown on web page:

http://www.bsi.si/html/eng/financial_data/hit/balance_bs_dekadna.html

2. FINANCIAL MARKETS

Interest rates (Table 2.1. - 2.6.)

Annual interest rates.

r = real rate over Tolar indexation clause

$r(D)$ = real rate over foreign exchange indexation clause

n = overall nominal rate

TOM = Tolar indexation clause

EUR = foreign exchange clause

Table 2.1.: Bank of Slovenia Interest Rates

Lombard loan: Within the framework of standing lombard facility Bank of Slovenia provides one-day lombard loans to banks and savings banks with securities used as collateral. The pledged securities should amount to 110% of the amount of lombard loan.

Repo interest rate for the temporary purchase of treasury Bills, tolar and foreign currency Bank of Slovenia's Bills with obligatory repurchase in 7 days was the weighted arithmetic average of daily repo interest rates until March 2004 (effective interest rate). The new 7-day repo was introduced in March 2004, it is offered on a closed basis. The interest rate announced is the latest valid interest rate.

Interest rate on banks' obligatory reserves: 1 percent per year since October 1991.

The overnight-deposit interest rate is an interest rate applying to the deposits placed by banks and savings banks on an overnight term with the Bank of Slovenia.

Long-term deposit at Bank of Slovenia has been established in July 2004. Variable interest rate refers to 60-day tolar bills' interest rate, increased by 0,2 percentage points.

Tolar bills are registered securities subscribed by banks and savings banks with maturity of 60 and 270 days. 60-day bills are offered on a permanent basis, 270-day bills were sold by auction till February 2004, afterwards are offered on a closed basis. Interest rates for tolar bills are nominal given, in the case of auctions they are effective rates. Offers of 270-tolar Bills have been frozen since November 2004.

Foreign currency bills are transferable registered securities not issued in series. They are offered on

permanent basis and can be purchased by banks (by other legal persons through banks till 3rd May 2000). They are sold for Euros (till 16.02.1999 for German Marks) or US Dollars at a discount with maturities of two to four months.

Penalty rate is generally used in cases of overdue payments. The penalty rate is determined by the Law on the legal penalty rate since 28.06.2003.

Interest rates for a certain type of instrument in the table are those last valid in a period (except in the case of effective interest rates). The annual averages of interest rates are computed as simple arithmetic averages of monthly data, if such data are available.

Table 2.2.: Interbank Money Market Rates and Indexation Clause

Interbank market

The figures are annual nominal interest rates for unsecured Slovenian tolar deposits on the Slovenian interbank market. Interest rate for overnight deposits (SIONIA) is weighted average interest rate for overnight deposits. Interest rate for deposits till 30 days is weighted average interest rate for deposits with maturity till 30 days.

The annual averages of interbank interest rates are computed as simple arithmetic averages of monthly data.

Tolar indexation clause

Tolar indexation clause (TOM) is annual interest rate, calculated by the Statistical Office of Republic of Slovenia and used for preserving the value of financial liabilities and assets in domestic currency.

TOM (monthly): since 5th August 1995: average of previous 3 months' inflation (until June 1995 indexation was based on so called R that was equal to the previous months' inflation rate, from 1st June till 4th August 1995 indexation was based on the average of previous 3 months' inflation); since February 1996: 4 months; since December 1996: 6 months; since May 1997: 12 months.

Financial liabilities and assets in domestic currency, with maturity less than 1 year, are not revalued since July 2002.

Foreign exchange indexation clause

Monthly rate is growth rate of Bank of Slovenia's end of month exchange rate for EUR (DEM) or USD.

Annual rate is computed from monthly rate on the conform basis, taking into account the actual number of days in the month and in the year.

Figures for 1993 to 1998 in columns 4, 6 and 8 represent growth of the category in the period December to December.

Table 2.3.: Average Commercial Banks' Interest Rates

Average interest rates (r and $r(D)$) are weighted arithmetic averages of the minimum and maximum interest rates.

Spread is the difference between the weighted minimum and maximum interest rate: $r_{min}=r - \text{spread}$, $r_{max}=r+\text{spread}$.

Nominal interest rates (n) are total annual interest rates.

The figures for the latest month are always provisional; updated figures in the following Monthly Bulletin are not marked with sign *.

With September 1995 was abolished the revaluation with the tolar indexation clause for obligations in domestic currency till 30 days, with July 2002 also revaluation for all loans and deposits in domestic currency with maturity less than 1 year.

Note 1: With the 1st July 2002 the "Law on changes and completions of the law on penalty rate and tolar indexation clause" came into force. It prohibits the use of tolar indexation clause for assets and obligations in domestic currency with the maturity less than 1 year. At the same time have most banks also stopped using the foreign exchange clause for short-term loans and deposits, which has reduced the number of reporting banks and led to series breaks.

Table 2.4.: Average Commercial Banks' Interest Rates on New Loans

Average interest rates on new loans are calculated on a basis of the data of the eight biggest banks, selected by balance-sheet-total criterion. New loans represent new contracts in the reference month. Data for consumer loans to households is collected on the representative sample of new loans (limited number of reports, min/max value). Any automatically changed conditions of lending contracts do not represent new business.

Interest rate on new business is a nominal interest rate increased by a sum of base interest rate or interest rate bounded to the euro exchange clause and subsidy per annum. Average interest rate on new business does not include any administrative or other costs.

All the interest rates are nominal weighted arithmetic averages, where value of certain type of loan represents the weight, except for foreign currency loans where the growth of foreign exchange rate is not taken into consideration.

The interest rates are presented separately, according to their type:

- NOM = a nominal interest rate, without indexation,
 TOM = an interest rate is bound to the base interest rate (TOM),
 D = an interest rate is bound to the euro exchange clause.

The annual averages are computed as simple arithmetic averages of monthly data.

Table 2.5.: Average Commercial Banks' Interest Rates on Basis of Interest Income and Interest Expenses

Interest rates are computed as the ratio of the amount of interest to the average balance of assets. Interest is represented by the interest income and interest expenses. The average amount of investments/assets is a sum of daily values divided by the number of days.

Because of the change in the frame of accounts for banks and savings banks since May 2002 the revalorization and interest incomes are no more represented separately, so the calculation of the real effective interest rates is no longer possible.

Table: Breakdown of bank` assets and liabilities by type of Indexation Clauses

		Loans			Deposits			Total		
		TOM	D	NOM	TOM	D	NOM	TOM	D	NOM
1999	Jan.-Mar.	92,2	7,9	0,0	58,6	3,6	37,8	73,8	5,5	20,7

Ljubljana Stock Exchange (Tables 2.7. to 2.9.)

Table 2.7.: The Ljubljana Stock Exchange: Turnover by Market Segment and by Type of Securities

Shares – Privatization Investment Funds shares are not included.

PIF - Privatization Investment Funds shares.

Turnover is measured by a single counting.

Table 2.8.: The Ljubljana Stock Exchange: Market Capitalization and Turnover Ratio

Market capitalization by market segment and by type of securities is calculated as the sum of market

capitalization of individual securities. Market capitalization of an individual security is calculated as the product of the number of listed securities and the market price at the end of period.

Turnover ratio is calculated as turnover in a period divided by market capitalization at the end of period.

Short-term securities are not included in calculations of market capitalization and turnover ratio.

Table 2.9.: The Ljubljana Stock Exchange: Slovenian Stock Exchange Index and Bond Index

SBI - Slovenian Stock Exchange Index (index value: January 1994=1000)

BIO - Bond Index.

SBI, BIO - value of SBI and BIO at the end of period.

dT - change of index value by points.

d% - change of index value in percentage.

Min, Max - minimum and maximum value of index in a period.

Exchange rates (Tables 2.10.1. to 2.11.4.)

Tables 2.10.: Selected Bank of Slovenia Exchange Rates- Average Rates

The tables show Bank of Slovenia middle rates. Annual rates are computed as arithmetical averages of monthly rates. Monthly averages are computed as arithmetical averages of daily rates (Sundays and holidays are not included).

As from 1st January 1999, with introduction of European Monetary Union, the European Currency Unit (XEU) was replaced by the Euro (EUR) at the exchange rate 1 : 1. Fixed exchange rates between the Euro and the national currencies of the EMU Member States (valid from 1st January 2001):

1EUR =	40.33990 BEF
=	1.95583 DEM
=	340.75000 GRD
=	166.38600 ESP
=	6.55957 FRF
=	0.78756 IEP
=	1936.27000 ITL
=	40.33990 LUF
=	2.20371 NLG
=	13.76030 ATS
=	200.48200 PTE
=	5.94573 FIM

Due to the introduction of Euro in January 2002 the exchange rates of members of EMU currencies (ATS, FRF, DEM, ITL) are replaced by the exchange rates of some EU accession countries (CZK, HUF, PLN, SKK).

Introduction of a new currency, the Kuna (=1,000 previous Croatian Dinars) on 30th May 1994.

The Polish zloty was denominated on 1st January 1995 at the exchange rate 1 new zloty for 10.000 old zlotys.

Tables 2.11.: Turnover and Foreign Exchange Market

Annual rates are computed as arithmetical averages of monthly rates. Monthly rates are averages computed from daily rates on working days, weighed with turnover. Foreign currency exchange offices also report transactions on Saturdays, not shown in the table, but included in the monthly and annual totals.

Totals also include transactions between banks and enterprises and between banks solely. In addition to that the transactions between enterprises are included until 30th September 1999 and the transactions of banks with non-residents and households from 1st October 1999.

On the spot exchange market the timing of settlement is at latest 2 working days from the agreement. The forward exchange market is designed for transaction where the timing of settlement is at least 2 working days after the agreement.

The data by the contract agreement are defined by the agreement time of the transaction. The data by the contract settlement are time defined by the settlement time of the transaction.

Data for the turnover on the forward exchange market are available from October 1999. Also the data for turnover by the settlement are available only from October 1999.

3. BALANCE OF PAYMENTS AND EXTERNAL POSITION

Balance of Payments (Tables 3.1. to 3.4.)

General notes

In most respects the Slovenian Balance of Payments (BOP) conforms to the methodology of the IMF's *Balance of Payments Manual, fifth edition (1993)*.

Characteristics of the Data

Minus sign (-) indicates imports or surplus of imports over exports in the current account, increase in assets or decrease in liabilities in the capital and financial accounts, and growth of reserve assets. Data for transactions are converted from original currencies to EUR using the daily Bank of Slovenia exchange rates, or average exchange rates of the period if the exact date of transaction is not known.

Revision policy

Revision of balance of payments, international investment position and gross external debt data occur as follow:

- revision for **monthly data** are made with the release of:
 - the corresponding quarterly data;
 - the corresponding revised quarterly data;
 - the international investment position data for the corresponding year; and
 - the revised international investment position data for the corresponding year;
- revision for **quarterly data** are made with the release of:
 - the data for the following quarter;
 - the international investment position data for the corresponding year; and
 - the revised international investment position data for the corresponding year;
- revision for **annual** international investment position and external data are made with the release of the data for following years.

Data sources

BOP is compiled on the basis of monthly available data on transactions (ITRS), stock positions and estimates.

- **Reports on transactions**
 - accounts of domestic banks held with correspondent banks abroad (including the central bank),
 - nonresident accounts held with domestic banks,
 - non-bank resident accounts abroad,
 - other accounts between residents and nonresidents,
 - payments between residents and nonresidents in Slovenian Tolars.

Classification of transactions is using the descriptions of transactions provided by the banks' clients;

- **Reports on short-term claims and liabilities to non-residents (form SKV)** is a source for short-term trade credits since 2002.
- **Customs declarations;** from 1.5.2004 data on goods item for EU countries are collected through reports (**Intrastat**), while data for other countries are collected through Customs declarations (**Extrastat**).
- **Reports to the Bank of Slovenia on registered credits granted to and disbursed abroad;** For the period from 1997 also data on nature of direct payments from foreign creditors, which settle liabilities of domestic debtors to other nonresidents, are available from these reports.
- **Yearly surveys on balance and transactions with affiliated enterprises (SN)** is a source for reinvested earnings of direct investments.
- **Accounting data of the Bank of Slovenia;**
- **Commercial banks balance sheet data;**
- **Estimates.**
- **Monthly survey of duty free shops.**

There are several estimation models used in the BOP for the valuation of data on imports, incoming travel, labor income, Italian pensions (till the end of 1998), foreign currency and deposits of resident households.

Current account

Goods

Data for the General merchandise are based on customs declarations. Data on imports c.i.f. and exports f.o.b. are compiled by the Statistical Office. **Adjustments for valuation** of data on imports and **coverage** of data on imports and exports are made by the Bank of Slovenia. The imports data are adjusted from c.i.f. basis to f.o.b. basis by the coefficient which is equal to the weighted average of coefficients between

the c.i.f. and f.o.b. values of imported goods (for the available sample), separately calculated for each type of merchandise, transport means and country of the exporter. The **coverage adjustments** are made for goods imported without customs declaration and for which data are available from ITRS or reports of duty free shops and consignment warehouses. Since 1.5.2004 the coverage adjustments include as an estimate also data on imports of motor vehicles from EU by natural persons, not covered in Intrastat System.

Services

Transport

The source for recording of transportation services is the ITRS.

Travel

The ITRS sources used in the compilation of the **incoming travel** item include: a.) health and education related services, b.) payments made by nonresidents to Slovenian tourist agencies, c.) net withdrawals in tolar from nonresident accounts, d.) money spent in casinos by nonresidents, e.) data on sales of goods to nonresidents in duty free shops and consignment warehouses, f.) payments with credit cards and g.) sales of Tolars to nonresidents abroad.

The data on sales of Tolars to nonresidents in Slovenia are estimated on the number of border crossings of foreign travellers and on the number of nights spent by foreign tourists.

Data source for the item expenditure on travel are ITRS and estimations.

Construction services

The source of data is ITRS. All construction works are recorded under construction services.

Insurance services

Premiums on life and non-life insurance are split into two components: (i) the service charge included in insurance services and (ii) the premium in a narrow sense recorded as current transfer. The calculation of service charge is based on a fixed percentage of the premium payments.

Government services

All transactions settled through accounts of Slovenian embassies abroad as well as transactions coded as government services settled through accounts of Slovenian banks with foreign correspondents are included in this item.

Income

The ITRS is used as a main source for recording of **compensation of employees**. As many wages are not paid through domestic banks, supplementary estimations of such receipts from the neighboring countries are made. Data on **reinvested earnings and income on equity** are available in an annual survey of Slovenian direct investors abroad and of foreign direct investment enterprises in Slovenia. The present recording of **other investment income** (interest income) is based on the actual payments.

Current transfers

In this item workers' remittances, insurance and other transfers of other sectors are included. The **insurance** item is calculated as a difference between the insurance premiums received and the claims paid on the credit side and vice versa on the debit side. The main source for **other transfers** are the ITRS and the customs documents.

Capital and financial account

Capital account

Capital transfers

Migrants' transfers covers not only payments recorded by domestic banks but also the changes in residency of accounts held with these banks.

Financial account

Direct investment

Direct investment is recorded on the basis of reporting of payments through domestic banks and of data from customs declarations. Data on reinvested earnings is based on yearly surveys on balance and transactions with affiliated enterprises (SN) and are included monthly as one twelfth of the yearly figure.

Until 1997 purchase and sale of all shares and equity have been included in this item.

From the beginning of 1997, purchase and sale of shares that assure more than 50 percent of company's equity, a control package of shares, shares issued by domestic companies on the primary markets with the purpose to increase the nominal capital of the company are included in this item, due to capital control measures. With the new Foreign Exchange Act in 1999 direct investment 10% rule is applied.

From 2001 onwards inter-company debt transactions between affiliated enterprises (10 percent or more capital share) are recorded as direct investment - other capital transactions. Until 2001 this kind of transactions are recorded as loans. Since 2002 the item other capital within direct investments includes also data on short-term trade credits between affiliated enterprises.

Portfolio investment

Until 1997 only data on sales and purchases of debt securities through banks were included in this item. Since

February 1997 equity securities, not having the characteristics described in the note on Direct investment are included in this item too. With the new Foreign Exchange Act in 1999 portfolio investment transactions include all transactions below the 10% rule.

Loans

From 2001 onwards inter-company debt transactions between affiliated enterprises (10 percent or more capital share) are not recorded as loans, but are recorded as direct investment - other capital transactions.

Other investment

Other investments except equity between affiliated enterprises are included here and not under Direct investment. Short-term trade credits are estimated and recorded on net basis as change of assets till 2001. Estimation is based on comparison of data on imports and exports from customs declarations with corresponding settlements. Since 2002 onwards short-term trade credits are included on the basis of reports on short-term claims and liabilities to non-residents. Short-term trade credits between affiliated enterprises are included in direct investments. Item currency and deposits of households is estimated by using data on net purchases of foreign currency in foreign exchange offices, net deposits to households' foreign exchange accounts at domestic banks, estimated expenditure of resident households abroad (see Travel).

Tables 3.1.: Balance of Payments 1988 - 1992

Excluding transactions with former Yugoslav Republics; processing is included in services, excluded in merchandise.

Note 1: For 1988 and 1989, Official sector data is included in Other sectors.

Note 2: For 1988 through 1990, Statistical errors include sales of claims from bilateral agreements to the former National Bank of Yugoslavia and its purchases of foreign currency through Slovenian foreign currency exchange offices.

Note 3: Reserve assets of the Bank of Slovenia.

Tables 3.2. and 3.4.: Balance of Payments

The data for the current year are revised monthly. Data become final according to the revision practice (see revision practice).

In June 2001 Slovenia acquired 16.39% share in holdings of former Yugoslavia with BIS (Bank for International Settlements), consisting of gold 16.9 mio SIT (EUR 77.8 million), foreign currencies 1.1 mio SIT (EUR 5.3 million) and shares 3.0 mio SIT (EUR 13.8 million). This transaction is not considered to be a balance of payments' flow, but a part of 'other changes' item, which reconciles the international investment position in consecutive periods.

Note 1: CD: customs declarations - foreign trade definitions (Statistical Office of Republic of Slovenia).

Note 2: June 1996: includes issue of government bonds in exchange for a part of allocated foreign debt in the amount of 63.7 mio SIT (EUR 374.9 million). Banks' liabilities under foreign loans are decreased for the same amount and transferred to liabilities to Government.

Note 3: Issues of government bonds:

- August 1996 (EUR 253.7 million);
- June 1997 (EUR 205.1 million);
- May 1998 (EUR 500.0 million);
- March 1999 (EUR 400.0 million);
- March 2000 (EUR 400.0 million) and in February 2001 (EUR 100.0 million);
- April 2001 (EUR 450.0 million).

Note 4: For 1993-2001, short-term claims include net changes in commercial credits (received and granted). Since 2002 onwards short-term commercial credits are included on the basis of SKV reports on assets' and liabilities' side of balance of payments. Short-term commercial credits between affiliated enterprises are included in direct investments item while other commercial credits are included in other investments/trade credits.

Note 5: Includes mostly BS fiduciary accounts. In June 1996 the amount of 21.2 mio SIT (EUR 124.9 million) was transferred to regular BS reserve accounts.

Note 6: Use of IMF credit (assumed upon membership in January 1993).

Note 7: Reserve assets of the Bank of Slovenia.

Note 8: The data for reinvested earnings for the years 2004 and 2005 is not available yet, therefore a five-year average (from 1999 to 2003) of reinvested earnings is included as an estimation. In the year 2005 this estimation will be replaced with the actual data for reinvested earnings for the year 2004 and an estimation (five year average - from 2000 to 2004) for the year 2005.

Note 9: From 2001 there is a time series break on the items direct investment and loans. From 2001 inter-company debt transactions between affiliated enterprises (10 percent or more capital share) are included in the direct investment item, before that they were included in loans item. Since 2002 the item direct investments includes also short-term trade credits between affiliated enterprises.

Note 10: Transfers from EU budget are since 1.5.2004 recorded in current and capital transfers according to the nature of their use. Split between current and capital transfers is provided by the Ministry of Finance.

Table 3.5: Merchandise trade

The Merchandise trade data for the current month are estimated, due to the change in reporting system for trade statistics (Intrastat).

Exports f.o.b. and imports c.i.f. Years 2004: provisional data (Source: Statistical Office of RS).

The effective exchange rate: Growth of index denotes growth of value of Tolar, and vice versa.

3.6 Short-term commercial credits

Tables include positions of claims and liabilities of short-term commercial credits by countries/groups of countries in the last eight months. Data source is direct reporting of enterprises (reports SKV).

International Investment Position of Slovenia (Table 3.7.)

General notes

The international investment position is the balance sheet of the stock of external financial assets and liabilities. The financial items that comprise the position consist of claims on nonresidents, liabilities to nonresidents, monetary gold, and SDRs.

Methodology of the international investment position (IIP) of Slovenia is based on the fifth edition of the *Balance of Payments Manual*, IMF, 1993. The Manual distinguishes four sectors - monetary authorities, general government, banks, and other sectors.

Revision policy

See revision policy notes for "Balance of Payments" (Tables 3.1. to 3.4.)

Data sources

Data sources for the international investment position of Slovenia are mainly the same as those for the balance of payments financial account. However, there are differences with some items as follows:

Direct investment

Data on direct investment are collected from:

- concessional surveys on equity investment (SN),
- reports on loans granted to or received from nonresidents,
- short term commercial credits with nonresidents (SKV),
- reports on accounts abroad.

Source for the balance of payments is *international transactions' reporting system* - ITRS and reports on loans granted to or received from nonresidents.

In accordance with the recommendations of IMF, this item comprises investment where direct investor owns 10 percent or more of ordinary shares or voting power. Equity shares are valued at book value according to the accounting standards. Reinvested earnings are included.

Claims on and liabilities to affiliated enterprises are included in direct investment-other capital item. Intercompany claims or liabilities between affiliated banks and affiliated financial intermediaries recorded under direct investment capital are limited to those associated with permanent debt (loan capital representing a permanent interest). Until 2000 all long term intercompany claims are liabilities between affiliated banks and affiliated financial intermediaries were included in this item (not only permanent debt).

Data on claims and liabilities of Slovene enterprises in indirectly affiliated enterprises from 1996 onwards are included in the item 'Direct investment abroad' (in case when enterprise abroad having Slovene direct investment holds 10% or more of equity in other foreign enterprise). In the item 'Direct investment in Slovenia' data on investment of foreign enterprises in indirectly affiliated enterprises in Slovenia are included (in case that Slovene enterprise with foreign direct investment holds 10% or more of equity in other Slovene enterprise).

Portfolio investment

Data on equity securities and other equity shares are also available from enterprises' surveys (form SN), but only data from surveys where direct investor owns less than 10 percent of ordinary shares or voting power, are included. (In the balance of payments, transactions with equity securities and other shares are collected from ITRS (see note to Tables 3.1. to 3.4. /Capital and financial account/Portfolio investment).

Data on residents' holdings of debt securities are available from direct reports from banks, and brokerage houses. For the balance of payments these data are collected from ITRS.

Liabilities of debt securities of government, banking and other sectors are available from credit registration from and Central Securities Clearing Corporation.

Trade credits and loans

Source for short-term trade credits are *reports of enterprises on stock of external claims and liabilities* (form SKV).

Sources for long-term trade credits and loans are credit registration forms and are the same for the international investment position and the balance of payments. Until 2000 the balance of payments did not distinguish loans between affiliated companies from loans between unaffiliated companies and included all loans in other investment items.

Currency & deposits, other assets, other liabilities and reserve assets

Sources of data for these items are banks' reports and Bank of Slovenia accounting data and are consistent with those for the balance of payments.

In the IIP arrears on loans and long term commercial credits are included in other claim/liabilities as short term item. Balance of payments does not include arrears.

The item "Assets / Currency and deposits of other sectors" in international investment position also includes data from the Bank for International Settlements (BIS) on deposits of Slovenian households in the banks in member states of BIS.

Till 2002 the item "Other liabilities of other sectors" in the IIP consists of the data on contractual joint ventures, which are not available for the balance of payments.

Table 3.7.: International Investment Position of Slovenia

IIP data do not include:

- data on real estate owned by Slovenian households abroad (mainly real estate in Croatia),
- claims on other countries on the territory of former SFR Yugoslavia, subject of negotiations on succession, expropriated assets in these territories and other assets transferred to the Slovenian government during the process of privatization.

Additional data on Direct Investment are available in a special publication of the Bank of Slovenia: 'Neposredne naložbe – Direct Investment' and on Bank of Slovenia Web site: <http://www.bsi.si/html/eng/publications/index.html>.

Gross External Debt (Tables 3.8 to 3.11)

General notes

Methodology is based on External Debt Statistics: Guide for Compilers and Users, IMF, 2003.

The guide is available under the following web address:

<http://www.imf.org/external/pubs/ft/eds/Eng/Guide/index.htm>.

Revision policy

See revision policy notes for "Balance of Payments" (Tables 3.1. to 3.4.)

Data sources

Gross external debt consists of debt liabilities from the international investment position (IIP). Data sources for Tables 3.8 to 3.10 are the same as those for the international investment position excluding the data on direct investment.

Table 3.8 Net External Debt

The table presents gross external debt, gross external assets in debt instruments, and net debt position. The data are the same as presented in the international investment position (IIP). The net external debt position is equal to gross external debt deducted by gross external assets in debt instruments.

Table 3.9 Gross External Debt

Gross external debt, at any given time, is the outstanding amount of those current, and not contingent, liabilities that require payment(s) of principal and/or interest by the debtor at some point(s) in the future and are owed to non-residents by residents of an economy. The types of financial instruments included in the presentation of the gross external debt position are as follows: debt securities (money market instruments, bonds and notes), trade credits (short- and long-term), loans (short- and long-term), cash, deposits and other debt liabilities. Maturity for debt liabilities is based on the formal criterion of original maturity. Long-term debt is defined as debt with an original maturity of over one year or with no maturity stated. Short-term debt, which includes cash, is debt repayable at notice or with an original maturity of one year or less.

Debt instruments are valued at nominal value. Accrued interest is excluded.

Before July 2003, gross external debt was presented in Table 3.9 External Debt and in Table 3.12.2 International Investment Position of Slovenia - Liabilities:

Stocks as at 31 December 2002

NET POSITION	1,4	=	NET POSITION	1,4

Short-term trade credits	0,4			1,0

*Liabilities to direct investors and affiliated enterprises are not broken down by debt instruments (concept of new standard). An amount of 1.0 bil. of EUR included: 0.4 bil. of EUR short-term trade credits and 0.6 bil. of EUR loans (short- and long-term)

** Data from Central Securities Clearing Corporation

Table 3.10 Debt – Service Payment Schedule

Service payments projected are estimates of payments due on existing debt outstanding and do not include interest rate changes.

Table 3.11 Debt indicators

Note 1: Short-term debt includes the value of short-term external debt outstanding (original maturity) and the value of long-term external debt outstanding (original maturity) due to be paid in one year or less.

International Liquidity (Table 3.12.)

Table 3.12.: International Liquidity

Foreign exchange reserves of the Bank of Slovenia and banks include foreign cash in convertible currencies, deposits abroad and first class securities of foreign issuers. Balances on fiduciary accounts are included in 'Other foreign assets'.

Foreign exchange reserves of banks are only part of item 'Foreign Assets' in Table 1.4. Foreign assets also include other foreign currencies, deposits abroad, foreign securities and other foreign assets, which do not have the nature of high liquid international funds.

4. GENERAL ECONOMIC INDICATORS

Table 4.1.: Derivation and Expenditure on Gross domestic product

Data for 1999 are partially estimated.

Table 4.2.: Quarterly real gross domestic product

1999 - 1994: constant prices 1992; reference year 2000;
1995 - 2000: constant prices 1995; reference year 2000;
2000 and following: constant prices 2000;

Table 4.3.: Industry

Data for production with breakdown by industries for years 1992 to 1993 and employment for years 1992 to 1995 are estimations based on methodologies used in those years.

Table 4.5.: Employment and unemployment

The majority of data for the period before 1997 are estimations based on methodologies used in those years.

Table 4.6.: Average wages

Real wages are deflated with consumer price index.

Table 4.7.: Registered households' income

Real aggregates are deflated with consumer prices index.

5. PUBLIC FINANCE**Table 5.1.: General Government Revenues and Expenditures**

Note 1: The data of the current and previous year are revised monthly until the data on previous year became final.

Tables 5.2.: General Government Lending, Repayments and Financing

General Government Operations (Consolidated state budget, local governments, pension fund and health insurance fund).

Note 1: The data of the current and previous year are revised monthly until the data on previous year became final.

Tables 5.3.: Debt of Republic of Slovenia

Republic of Slovenia is defined as a legal person. The data from tables 5.1, 5.2. and 5.3. originate in the Bulletin on Government Finance, published by the Ministry of Finance.

6. PAYMENT SYSTEMS AND PAYMENT INSTRUMENTS**6.2. Payment cards**

Note 1: Credit cards: A card indicating that the holder has been granted a line of credit. The credit granted may be settled in full by the specific data each month (delayed debit card ie. charge card), or may be settled in part, with the balance taken as extended credit (credit card).

Note 2: Debit cards: A card which enables the holder to have purchases directly charged to funds on the cardholder's bank account.

Note 3: Cards, issued abroad: payment cards issued abroad and used for payments in Slovenia, mostly by non-residents.

Note 4: Volume and value of transactions abroad: use of cards issued in Slovenia for payments abroad.

Number of payment cards in circulation: number of valid payment cards held by residents and non-residents, issued in Slovenia. Data refer to the end of each quarter/year.

Number and value of payments refer to the use of payment cards in each quarter/year.

Domestic cards: payment cards issued by banks and enterprises residents in Slovenia without licence agreements with foreign issuers.

Licence cards: payment cards issued by banks and enterprises residents in Slovenia under licence agreements with foreign issuers.

Bank card: payment cards issued by banks.

Retailer cards: payment card issued by non-banking institutions, mostly for use at specific retail outlets.

Personal cards: payment cards issued to natural persons (family cards included).

Business cards: payment cards issued to legal entities.

6.3. Other payment instruments and innovative payment schemes

Note 1: Data refer to the end of each quarter

Note 2: Data refer to payment transactions and money withdrawals at POS terminals in Slovenia.

6.4. Electronic banking

Note 1: Only debt transactions are included.

6.5. Credit and debit transfers

A paper-based payment order is a standardised payment instrument related to a credit transfer, in which the payer submits an order on a paper-based form. It means any instruction by an account holder to his payment service provider requesting the transfer of funds from his account to another account (also between accounts of the same account holder). A contemporary form can assure automated processing with ICR technology (Intelligent Character Recognition) or classic manual processing. A special form of paper-based payment order is the so-called special payment order, which is issued by a creditor to be paid by the debtor. The special payment order is presented by the debtor at the bank, which then credits his transaction account and transfers the amount to the account of the creditor. The special payment order was developed by the BoS in 1997.

A non-paper based payment order is an electronic payment order related to a credit transfer, which the customer of the bank submits to his bank on electronic storage media.

A standing order is an instruction from a customer to his bank to make a regular payment of a fixed amount to a named creditor. The payer authorises his bank (the bank at which he maintains a transaction account) to pay a specified amount regularly to another account. The payment must be repeated at least five times. The execution of payments occurs under exact conditions on a particular day of the month.

Direct credit is special form of payment instrument related to a credit transfer, initiated by the payer, which enables a cashless fund transfer from payer to payee. Direct credit is used for the execution of small value payments, e.g., salaries, pensions, dividends and similar payments to a large number of creditors.

Direct debit is a preauthorised debit on the payer's bank account initiated by the payee. It is a payment instrument consisting of automatic debiting of the debtor's account for goods and services delivered by the creditor. Direct debit is initiated by the payee. The debtor (payer) authorises his bank to transfer funds from his bank account to the creditor's account and the creditor to submit a payment order to the creditor's bank to be paid. A typical example is an electricity bill payment.

A special money order is a standardised paper-based debit instrument used to remit money to the named payee. A special money order is issued by a bank, allowing the individual named on the order form to receive a specified amount of cash on demand.

6.6. Network of commercial banks

Note 1: In the number of head offices two banks with the license for operation pursuant to the Constitutional Law only are included (Kreditna banka Maribor d.d. and Ljubljanska banka d.d. Ljubljana).

Note 2: Statistical Regions, Source: Statistical Office of the Republic of Slovenia, March 31, 2000. Data up to year 2000 are presented according to Standard Classification of Territorial Units - Statistical Regions of the Republic of Slovenia, January 1, 1999.

Note 3: Data referring to the Postal bank of Slovenia do not include units of the Post of Slovenia that operate for the Postal bank of Slovenia on the contractual basis.

Exchange rates ³				http://www.bsi.si/html/eng/publications/index.html
Addendum:				
Population			NLT 28 Q2/05	"Prva statistična objava - First release" (Statistical Office of the Republic of Slovenia)

* The period to which data to be released relate is shown in parentheses. NLT stands for *no-later-than*.

Financial and external sector data (except Merchandise trade) are first disseminated on the Bank of Slovenia Internet website, and later in the Bank of Slovenia Monthly Bulletin. At the end of business week, the precise dates of release during the following week are published on the Bank of Slovenia Internet website (http://www.bsi.si/html/eng/financial_data/hit/adv_rel_cal.html).

¹ The data on interest rates are published by the Bank of Slovenia and Ministry of Finance separately.

² Data on representative interest rate of the BoS and interbank money market rates are disseminated whenever the change occurs.

³ Data are disseminated daily on Bank of Slovenia's page Currency Exchange rates - for display (http://www.bsi.si/html/eng/financial_data/daily/tecajna_lista.asp) and on Archive of financial data (http://www.bsi.si/html/eng/financial_data/arhiv/index.html).
