B. MONETARY POLICY

1. Exchange rate
2. Interest rates

1. At its meeting on 6 October 2005, the Governing Board of the Bank of Slovenia decided to leave the key interest rates of the Bank of Slovenia unchanged. The interest rate on the 60-day tolar bills remains at 4.0% and the interest rate on the 7-day foreign exchange swap remains at 1.5%.

On the basis of the regular economic analysis, the Governing Board assesses that the monetary policy stance is appropriate. The current level of interest rates is consistent with maintaining the stability of the nominal tolar exchange rate against the euro. At the same time, current price movements and medium-term inflation expectations remain in line with the medium-term price stability objective. The Governing Board expects that the inflation target related to the adoption of the euro will be met in time. Risks to meeting the price stability criterion relate mainly to the possibility of further increases in the prices of heating oil and fuels for transport, as the changes in these prices have a greater impact on inflation in Slovenia than on inflation in other EU Member States.

Developments in the global economy have lately been affected by greater uncertainties arising because of the hurricanes at the coast of the Gulf of Mexico. However, despite having effects on economic activity in the short run, the consequences of Hurricanes Katrina and Rita are currently assumed not to present a threat to the long-run growth of the global economy. Economic policymakers around the world pay considerable attention to high crude oil prices, which continue to be the most important risk to global economic activity.

The Slovenian economy grew above the trend growth rate in the second quarter of this year. This may in part be attributed to temporary impacts in foreign trade movements. Currently available indicators suggest that the economic activity has been slowing down recently. While household consumption continues to be strong for the moment, consumer confidence has been gradually eroding since April. Greater consumers' pessimism reflects tighter labour market conditions and increases in the prices of oil derivatives.

As in the euro area, the September price movements in Slovenia were also mainly influenced by the price growth of oil derivatives. Year-to-year inflation, measured by the Harmonised Consumer Price Index, rose to 2.5% in the euro area and to 3.2% in Slovenia. Although prices of oil derivatives in all EU Member States depend on price developments on international stock exchanges, their actual impact on inflation varies across individual countries.

The asymmetric impact of price movements in oil derivatives on indices of consumer prices is a consequence of different factors, namely the use of different weights of oil derivatives in calculating indices, various shares of the purchase price in the retail price of oil derivatives, modifications of tax policies and changes in exchange rates. The direct impact of changes in the prices of oil derivatives on inflation in Slovenia is above average, since Slovenia disposes of the second highest share of oil derivatives in the Harmonised Consumer Price Index within the EU, and the shares of the purchase price in the retail price of oil derivatives are relatively high because of low levels of excise duties. The contribution of oil derivatives to year-to-year inflation in August thus amounted to 0.6 percentage points in the euro area and to 1.4 percentage points in Slovenia. Price increases in oil derivatives contributed 1.7 percentage points to a 3.2 per cent year-to-year inflation rate in September.

2. The Governing Board of the Bank of Slovenia gave consent to the conclusion of a bilateral agreement between the Bank of Slovenia and the Italian Deposit Guarantee Scheme concerning bank deposit guarantees. The Agreement enables Slovene banks to additionally include their branches in Italy in the Italian Deposit Guarantee Scheme.

A. MONETARY REVIEW

1. INTERNATIONAL ENVIRONMENT

The forecasts for this year's economic growth in the eurozone remain unchanged. An improvement in growth is still expected in the third quarter in particular. This year's economic growth forecast in the USA has been cut only slightly after Hurricane Katrina. The Consensus forecast for the EU12 this year has been unchanged for four months now at 1.3%. Hope for improved growth in the third quarter comes from the encouraging figures showing high growth in German industry in the summer (thanks to the weak euro and strengthened foreign demand), which could slow slightly in the autumn, as clearly indicated by business confidence surveys. Industrial production and economic growth is also strengthening in Italy, while the figures for France are less encouraging. Despite the improvement in the third quarter, there is currently no sign of a long-lasting leap in economic growth in the EU12, owing in part to high oil prices, which are likely to impact on consumer purchasing power, while the improvement in corporate production has not for the moment been transferred to the labour market to any great degree. Consensus cut its growth forecast for the USA this year from 3.6% in August to 3.5% in September because of Hurricane Katrina. What the hurricane's impact will be on economic activity is not yet known, but the first figures released show that demand for jobs has risen in the affected region and that indicators of consumer confidence and business confidence have deteriorated owing to the higher inflation triggered by the hurricane via rises in oil prices. It is

forecast that higher oil prices in the USA will also bring about a fall in consumer purchasing power in other (unaffected) regions. Furthermore government expenditure will rise as the general government sector jumps to aid the affected regions, which will have a positive impact on economic growth (and a negative impact on the budget). At the same time, thanks to state aid to the affected regions, no cooling in the real estate market can be expected in the near future, despite the rise in interest rates in the USA.

The Federal Reserve continued to raise interest rates gradually, while the ECB has left its interest rates unchanged. The continuation of interest rate rises in the USA was slightly more uncertain on this occasion, given the damage done to the economy by Hurricane Katrina. Nevertheless, the Federal Open Market Committee felt that Katrina's effect on the economy was merely temporary, and that the outlook for solid economic growth remains good, and it therefore again raised the interest rate by 0.25 percentage points to 3.75%. Further interest rate rises are expected. The ECB is holding its key rate at 2.0%. Any change in the future is becoming increasingly unlikely as a significant turnaround in the economic growth continues to recede.

August inflation was primarily affected by high oil prices in both the USA and the eurozone. Inflation in the eurozone stood at 2.2% in August, the same as July, while year-on-year

growth in food prices and core inflation remain at a low level. Prices are expected to rise more quickly in September, as tobacco products get more expensive in Germany. No significant transmission of high oil prices into other prices can be seen yet. Air tickets have risen in price, but other prices are not rising because of oil, most probably as a result of weak domestic demand. August's inflation rate in the USA was 3.6% year-on-year (compared with 3.2% in July), of which higher energy prices accounted for 1.6 percentage points. Core inflation remained at 2.1%, as in July, despite expectations of an increase, as some price rises failed to occur (new cars, accommodation away from home and medical services). Inflation is expected to remain relatively high owing to the higher oil prices caused by hurricanes in the Gulf of Mexico.

In August and September the euro appreciated significantly against the dollar. This appreciation was the result of the slightly poorer outlook for the American economy brought by Hurricane Katrina and a slight deterioration in economic statistics, which led to speculation that the Fed would delay interest rate rises, at least temporarily (which subsequently did not happen). The euro then began to fall after the German election, which increased political instability in one of the eurozone's major countries.

Oil prices have been high since the end of August, primarily as a result of natural disasters. The first jump to USD 70 per barrel at the end of August was caused by Hurricane Katrina. The price then eased to approximately USD 64 per barrel at the beginning of September as a result of the release of part of the strategic petroleum reserve in the USA and in the International Energy Agency's. Prices then fluctuated under the influence of announcements of changes in stocks in the USA and assessments of lower global demand for oil this year. A temporary rise back to USD 67 per barrel in the second half

of September was the result of the approach of Rita, a second hurricane in the Gulf of Mexico. At their September meeting Opec members decided to increase pumping of crude by 2 million barrels per day in order to slightly ease oil markets. The increase had little effect on oil prices, as members had long been pumping oil at close to full capacity; in addition the oil supply problem is insufficient refining capacity, particularly after the disruption to refineries in the Gulf of Mexico. Work at refineries in the Gulf of Mexico should return to normal by this November, or December at the latest.

2. REAL SECTOR

Economic Activity

Economic growth in the second quarter was 5.2% year-on-year. This was the highest rate since the introduction of VAT. Net exports made the largest contribution to economic growth, thanks to extremely good growth in exports of goods and services and slower growth in imports. At the same time growth in final consumption continued, while the rate of growth in capital expenditure also increased. For the second quarter in a row there was a fairly large decline in inventories, and their contribution to economic growth was negative.

The SORS published the revised national accounts data for 2000 to 2004. A new methodology was used to revise the annual national accounts for the period. Because of the allocation of indirectly measured financial intermediation services to the end users of these services, nominal GDP was 1% higher on average. The effect of the allocation of indirectly measured financial intermediation services was greatest in 2000, with the resulting GDP up 1.1%, while the smallest difference was in 2001 and 2002, when nominal GDP was 0.8% higher. At the same time a transition was made to fixed prices, now based on prices from the previous year instead of the previous fixed annual basis. These methodological changes also saw a change in estimates of real rates of economic growth. In the majority of cases the revisions were made upwards, while the sole downwards revision was made in 2004, with economic growth

* in percentage points. Sources: Statistical Office of the Republic of Slovenia; Bank of Slovenia calculations.

in that year being cut from 4.6% to 4.2%. Additional changes that do not alter the level of or growth in GDP but merely have an effect on the expenditure structure are the transition of a part of intermediate government spending and the inclusion of the total of pwn-account construction activities of households.

The high dynamics in industrial production has only begun to slow gradually. After rapid acceleration at the beginning of the year, the monthly dynamics in industrial production slowed slightly in July. Industrial production in the first seven months of the year was 2.3% higher than in the same period last year. The largest factor in this rise was production of capital goods, which was 9.5% higher than in the same period last year. Production of intermediate goods was up 1.1%, while production of consumer goods was almost unchanged from last year. The monthly dynamics in industrial production still reached 0.7% in July, having stood at 1.7% in June. The fastest month-on-month growth in recent months was recorded by production of consumer goods, which stagnated in the first quarter but reached a high 1.5% in the three months to July. After being negative at the beginning of the year, the monthly growth rates in production of intermediate goods and capital goods were also fairly high. The Tramo-Seats seasonally adjusted figures also point to a good dynamics, although after the rapid rates at the beginning of the year the slowdown has been more pronounced than the impulse trend seasonally adjusted rates. The largest year-on-year declines in production in terms of sector were recorded by the foodstuffs industry (4.5%), the textile industry (7.2%) and the non-metallic mineral products sector (7.9%). The largest year-on-year rises in production were recorded by the car industry (31.1%) and the metals and metal products sector (7.2%).

A new methodology for monitoring industrial production was introduced for the July figures. The change was made because of the deficiencies in the old methodology, which did not reflect changes in quality, but merely changes in quantity, and is in line with preparations for the change in NACE classifications in 2007. In place of quantitative figures the new methodology includes figures for the value of production obtained from figures for sales revenues and figures for inventories adjusted

for prices of manufactured products. The figures under the new methodology are available from the beginning of 2004 and differ slightly from those published under the previous methodology. Average growth in industrial production in 2004 was thus cut from 4.8% to 4.4% under the new methodology. At the same time the average year-on-year growth in industrial production over the first seven months of this year improved from a decline of 0.3% to a rise of 2.3%.

The available indicators show the dynamics growth in other sectors to have slowed slightly at the beginning of the third quarter. Despite this slowdown the year-on-year rates remain high. While year-on-year growth in the real value of retail sales stood at 8.8% in the second quarter, in July it fell to a still-high 7.6%. The largest growth of 18% was recorded by sales of textile products. Having stood at more than 12% after the second quarter, year-on-year growth in the real value of work performed in the construction sector fell to under 2% in July compared with the same month last year. Housebuilding continued to grow faster than civil engineering work, where there was slight decline in volume year-on-year. Nevertheless, given the large rise in building permits issued in the second quarter, activity in the construction sector can be expected to remain intense in the third quarter.

Stagnation in business leaders' optimism and an increase in consumer pessimism are features of the beginning of the second half of the year. A strong decline in optimism in April was followed by a correction in May, then in the months to September the assessments and expectations of businesses remained relatively unchanged from the same months last year; there was a downturn in current assessments of export orders and total orders, but an upturn in business leaders' optimism regarding current output and expectations of employment and exports. High consumer optimism in the first quarter was followed by a cooling in the second quarter, while pessimism deepened further in the third quarter.

The Labour Market

After a jump in June, growth in total household income declined slightly in July. Year-on-year growth in total household income in the first seven months of the year amounted to 3.7%, or 1.3% in real terms. The year-on-year rate was reduced to 4.2% in July, while the one-year average of year-on-year rates remained unchanged at 6.4%. The largest average year-on-year rise of 8.7% over the seven months was recorded by earnings from employment, while other employment receipts fell by 6.2% year-on-year. Because there has probably been a shift this year from contract-based payments included among other employment receipts to wages and regular employment earnings because of a change in tax legislation, appropriate allowance must be made for this when considering the figures for changes in the individual components of household income. The seasonally adjusted figures show that the rise in the growth dynamics in wages has slowed slightly in recent months, while the negative current rate of growth in other employment receipts

has begun to diminish gradually. The current rate of growth in social transfers is continuing to fall.

Growth in average wages has not yet slowed fully. Year-on-year growth in the gross monthly wage fell again in July to 5.4%, but still averaged a high 6.5% over the first seven months of the year, or 4.1% in real terms. With economic growth of 3.9% recorded in the first half of the year, real growth in the average gross wage still seems too high, even allowing for the structural effect of falling employment in low-wage sectors and the aforementioned shift from contract-based payments to wage payments. Owing to the effects of the new tax legislation, nominal growth in the average net wage at 7.3% year-on-year in July, or 8.0% on average over the first seven months of the year is still higher than growth in the average gross wage. In this period wages grew fastest in the real estate and business services sector (12.6%), and the electricity, gas and water supply sector (9.8%). The lowest average year-on-year growth in wages over the first seven months of the year was recorded by the public sector.

Figures point to stagnation in the labour market in the summer months. Although year-on-year growth in the active population is still increasing, both the absolute number and the monthly growth rates are falling. The active population rose by 0.3% on average over the first seven months of the year. In the light of the fall in the number of unemployed, which ceased in July, the majority of this increase was the result of an increase of the number of people in active work, primarily those in employment at companies. This number grew by an average of 1.2% year-on-year over the first seven months of the year, with the monthly dynamics having slowed slightly in July compared with previous months. In terms of sector, the largest average year-on-year rises in employment over the first seven months of the year were recorded by the car industry and in the real estate and business services sector (9.4% and 7.4% respectively), while the largest declines in employment were recorded by the leather processing industry (11.2%) and the textile industry (8.8%). Year-on-year growth in public sector employment continues to fluctuate around 2%, primarily on account of employment

in the education sector and the health sector. Official figures even point to a fall in employment in public administration, although this is partly on account of methodological changes and changes in classification. Discounting changes in classification by sector, employment in public administration would also have grown by approximately 2%. The favourable trend in employment in the small business sector seen at the beginning of the year has slowed in recent months, as evidenced in particular by a slowdown in the current rates of growth.

July's figures also point to unfavourable trends in unemployment. July saw the end of a period of almost three years during which the unemployment rate had fallen year-on-year. In June and in the second quarter both registered unemployment and surveyed unemployment were at their lowest level since independence. The monthly growth rate in the number of unemployed remained positive in July, although slightly lower than at the beginning of the year.

Competitiveness

The nominal effective exchange rate of the tolar against a basket of foreign currencies appreciated by 0.4% in August. With the euro unchanged, the main factor in the rise in the domestic currency was a fall of 2% in the dollar, while the tolar fell in value by 0.2% against the pound sterling and 0.3% against the Swiss franc. In the year to August the tolar rose by 0.3%, of which one-third was attributable to a fall in the euro and two-thirds to a fall in the dollar.

The price competitiveness of the Slovenian economy is improving this year. In July competitiveness improved by

0.5% as measured by producer prices, but deteriorated by 0.3% as measured by consumer prices. Longer-term figures point to an improvement in price competitiveness as measured by both indicators: by 0.1% as measured by consumer prices, and by more than 1% as measured by producer prices. The depreciation of the tolar contributed 0.1 percentage points to the improvement in competitiveness, while the remainder was the result of smaller differences between the movement of domestic prices and foreign prices. In the year to July domestic living costs grew by just 0.1% more than foreign prices, while growth in domestic producer prices was more than 0.5% behind growth in foreign producer prices. Market conditions were the main factor in the slower rises in domestic producer prices. With increased competition from abroad, weak domestic demand held back price growth on the domestic market, but strong foreign demand is a natural brake on price growth, as Slovenian exporters are price takers.

Price competitiveness as measured by unit labour costs has been improving since April. In July it improved by 0.8% compared with the previous month, and by 0.6% year-on-year. Discounting the effect of the depreciation in the nominal effective exchange rate of the tolar, the main factors in the improvement in competitiveness are the high growth in industrial production, and also productivity, given the slower current rate of growth in employee labour costs, in particular the decline in other employment receipts.

The terms of trade of Slovenian exporters have been deteriorating for more than a year. Export prices were up 5.4% year-on-year in June, while import prices were up 9.2%. With import prices rising faster than export prices, the terms of trade of Slovenian exporters deteriorated by 3.5%. The most important factors in the deterioration in the terms of trade were rises in prices of metals and oil, while food prices and prices of industrial raw materials have again been rising since May. August saw year-on-year growth of 50% in euro prices of oil and 18% in euro prices of metals. Import prices are expected to continue growing faster than export prices in the coming months.

1) Effective exchange rate: basket of 7 currencies of Slovenia's main foreign trading partners (excluding Croatia), weighted by the shares in Slovenian goods trade. From January 2002 onward three currencies (EUR, USD, CHF) are used in the calculation. 2) Real exchange rate: SIT exchange rate divided by relative (domestic/foreign) price ratio.

3. PRICES

Year-on-year inflation rose from 2.1% in August to 3.2% in September, while the monthly rise in consumer prices stood at 1.0%. Price movements in three product groups were primarily responsible for the rise in year-on-year inflation of 1.1 percentage points. The strong rise in prices of refined petroleum products, as a result of higher refined petroleum product prices on international exchanges after Hurricane Katrina, contributed 0.45 percentage points to the rise in year-on-year inflation. The second major factor was the rise in clothing and footwear prices, which accounted for 0.25 percentage points of the rise in year-on-year inflation rate, with this correction representing a normalisation of the August seasonal movements. The effect of clothing and footwear seasonal sales in August was a fall in prices of 11.2% (compared with 7.7% last year), which reduced the August year-on-year inflation rate by 0.3 percentage points. September's rise of 8.9% (compared with 5.9% last year) in clothing and footwear prices is analogous to the March rises, which at that time led to an increase in year-on-year inflation of 0.25 percentage points. This year's seasonal shifts are probably the result of greater inclusion of seasonal sales in the calculation of price indices and deeper price cuts during the sales, the latter being attributable to increased competition after Slovenia joined the EU and higher imports of Chinese products. The third factor, which raised inflation by a further 0.3 percentage points, were price developments in food products and non-alcoholic beverages. There were certain anomalies in the last year's movement of prices in this group, with a decline of 1.15% being recorded (compared with a rise of 0.4% year), which is not a seasonal feature of this month. The largest brake on inflation in September was the decline in car prices, which lowered inflation by 0.1 percentage points. Car prices in September were 7.0% lower on average than in the same month last year.

Year-on-year inflation as measured by the harmonised index of consumer prices stood at 3.2% in September. The price convergence criterion, which is calculated as the 12-month average, remained unchanged from August at 2.7%.

The August reference value of price stability criterion, based at that time on the average inflation in Finland, Sweden and the Netherlands, was 2.4%. There was also a rise in year-on-year inflation in the eurozone in September, to 2.5% according to provisional figures, while the HICP in Germany rose from 1.9% to 2.7%. In both Slovenia and the eurozone September's price movements were under the considerable influence of the rise in prices of refined petroleum products; here it should be noted that the effect of changes in prices of refined petroleum products on inflation is asymmetric in EU countries (see frame).

Medium-term inflation factors such as the output gap, the nominal effective exchange rate and producer prices either remain in balance or are acting to reduce inflation. Despite the significant rise in economic growth in the second quarter, the output gap still remains slightly negative; with aggregate demand lower than aggregate supply there is still a disinflationary effect. Growth in private spending also remained behind GDP growth in the first half of the year. Should growth in household spending remain at the current level, as the July indicators suggest, any slowdown in economic activity could gradually give rise to some inflationary pressures. Another risk is the relatively fast wage growth, with wage growth significantly outstripping productivity growth in certain sectors, as seen in the analysis of the labour market. However, favourable year-on-year changes in producer prices and prices in individual groups of consumer goods (clothing and footwear, cars, and, for the moment, food) are acting to reduce inflation. The lower year-on-year growth being recorded by these groups of products is partly the result of increased competition since Slovenia joined the EU. In the future it will be necessary to pay particular attention to the potential transmission of high energy prices to other consumer prices, and the potential appearance of second-round effects caused by the transmission of higher prices into wage rises, which could then trigger an inflationary spiral. Overall, inflation risks remain balanced.

Asymmetric effect of movement of refined petroleum product prices in EU countries

The changes in prices of refined petroleum products in the last two years have had a significant influence on the movement of inflation in EU countries. This effect was particularly strong in September, as a result of the powerful shock in prices of refined petroleum products on international exchanges after Hurricane Katrina. Although it would appear intuitively that changes in prices of refined petroleum products on international exchanges would have the same effect on inflation in each country, in reality this is far from being the case. There are two factors at work, and they are examined below.

The first factor in the asymmetric effect of changes in prices of refined petroleum products in EU countries is the use of different weights for refined petroleum products in the price indices. The weight given to refined petroleum products in the HICP ranges in the EU from 2.8% in the UK to 9.6% in Luxembourg, with the weight for the EU as a whole standing at 4.5%. The weight given to refined petroleum products in Slovenia (fuels for transport and heating oil) is 8.2% this year, the second-highest in the EU. Here it should be noted that Slovenia has the highest HICP weight for heating oil in the EU (2.1%), compared with the average EU weight of 0.6%. This is of particular importance this year, as heating oil prices in the EU rose by 31% year-on-year, while prices of fuels for transport rose by just 12%. The HICP weights are calculated each year by the national statistical offices, which use surveys of household consumption to do so.

The second factor is the variation in the rise in prices of refined petroleum products in the different EU countries as a result of changes to tax policy, the structure of final prices of refined petroleum products and exchange rate changes.

Even though practically all EU countries purchase refined petroleum products on international markets, the rise in prices varies considerably from country to country. August's year-on-year growth in fuels for transport prices in the EU ranged from 8.1% in the Czech Republic to 25.2% in Latvia, while year-on-year growth in heating oil prices ranged from 3.1% in the Czech Republic to 45.4% in the UK. The first reason for this variation is the changes that can be made in tax policy via changes in excise duties (in Slovenia there is a policy of counter-cyclical adjustments in excise duties, which since July 2005 has no longer mitigated fluctuations in prices, as the duties then reached the minimum level allowed in the EU) and via changes in VAT rates (Hungary is planning to cut VAT on refined petroleum products from 25% to 20% on 1 October). The second reason is the structure of the final prices of refined petroleum products, as when the purchase price accounts for a greater proportion of the retail price, a change in purchase prices is reflected more heavily in the final prices. The structure of the final price is most heavily dependent on the level of excise duties (the high duty rate and the resulting low proportion of the final price accounted for by the purchase price is one of the reasons that prices of refined petroleum products in Denmark for example are growing more slowly than the EU average), and also depend to a lesser extent on the profit margin. The third reason, which does not apply to countries in the eurozone or those with a fixed exchange rate, is exchange rate changes (appreciation of 6.4% made a significant contribution to the lower year-on-year growth in prices of refined petroleum products in the Czech Republic).

The asymmetric effect of changes in prices of refined petroleum products on inflation is particularly evident in Slovenia. While prices of refined petroleum products contributed 0.6 percentage points on average to inflation in the EU in August, in Slovenia they contributed 1.4 percentage points. Elsewhere in the EU only in Luxembourg (1.6 percentage points) did prices of refined petroleum products make a greater contribution towards inflation in August.

Year-on-year growth of A HICP in August 2005

Source: Eurostat, ARC calculations

Year-on-year growth in producer prices of manufactured goods rose slightly in August, but was still relatively low at 2.1%. The figures indicate that the decline in year-on-year

growth in producer prices of manufactured goods seen in the first half of the year is gradually easing. Among the individual groups, growth in price of consumer goods remains favourable, having stood at 1.5% year-on-year in August, 0.6 percentage points less than year-on-year growth in consumer prices. Prices of intermediate goods, which include energy prices and prices of raw materials, were up 2.9% in August compared with the same month last year, while year-on-year growth in prices of capital goods fell from 1.8% in July to 0.8% in August.

4. PUBLIC SECTOR

At the end of September the government approved budget for 2006 and 2007, and sent it to the National Assembly proposals. The state budget deficit should amount to 1.4% of GDP in 2006, before falling to 1.2% of GDP in 2007. The draft budgets envisage changes to tax laws (a gradual cut in payroll taxes, which should be abolished in 2009, and amendments to the personal income tax act, the corporate income tax act, the tax procedure act and the value added tax act). A cut in the proportion of government expenditures is also planned. In addition to the draft budgets, the government was also to send a budget memorandum to the National Assembly at the end of September.

Source: Ministry of finance. Government expenditures for social security contributions are not excluded in consolidation.

Revenues

Year-on-year growth in revenues stood at 2.3% in real terms in the first half of the year, and was higher in the second quarter than in the first quarter. General government revenues grew by 2% year-on-year in real terms in the first quarter, and by 2.5% in the second quarter. The total nominal rise in the first half of the year was 4.8%, with tax revenues rising more rapidly. Provisional figures point to increasing year-on-year growth in revenues in July and August, which is primarily a reflection of the movement of VAT revenues.

Labour taxes grew by 2.6% in real terms in the first eight months of the year. The trends within this group of taxes varied considerably, primarily owing to changes in tax legislation. Personal income tax revenues remained at approximately the same level as last year in real terms. Revenues from social security contributions continue to grow most quickly among the labour taxes. They grew by 3.8% year-on-year in real terms in the first eight months of the year, which accords with the figures on high growth in gross wages and employment during this period. Year-on-year growth in payroll taxes amounted to 2.4% in real terms, and is expected to strengthen further in September and for the rest of the year owing to the progressive nature of the tax.

Revenues from corporate income tax in the first eight months of the year were higher in real terms than last year. The largest rise in corporate income tax revenues was recorded in the first quarter, 18% in real terms, with a rise of 9% coming in the second quarter. Revenues were up 12.3% year-on-year in real terms in the first eight months of the year. In line with the revision to the state budget, corporate income tax should amount to 2.2% of GDP this year, up 0.2 percentage points from last year.

Revenues from taxes on international trade have declined significantly. Revenues from taxes on international trade fell by 71.4% year-on-year in real terms in the first half of his year, as a result of Slovenia joining the EU. Year-end revenues are expected to be one-half of last year's, and just one-quarter of those in 2003.

Revenues from domestic taxes on goods and services, in particular VAT, strengthened again in the second quarter.

VAT revenues were up 15% in the second quarter in real terms from the same period last year, and were up 8.2% over the first half of the year. Revenues from domestic taxes on goods and services rose by 10.5% year-on-year in real terms during the same period, and by 7.2% in the first half of the year. Revenues from excise duties were up 4.5% in real terms in the first half of the year, while the average level of duties during the first eight months of the year was the same as the average during the same period last year.

Among revenues, it is inflows of funds from the EU budget that lag furthest behind the expected revenues. In the first seven months of the year Slovenia paid SIT 13.5 billion more into the EU budget than it received. Up to and including July, Slovenia had received SIT 28.4 billion, one-quarter of the revenues expected for this year, which means that the planned inflow of funds from the EU budget outlined in the revision to the state budget will be difficult to meet this year. Payments into the EU budget amounted to SIT 42 billion over the same period, and are proceeding according to plan. Payments into the EU budget will rise in the coming years: the 2006 plan is SIT 76.5 billion, while the 2007 plan is SIT 88 billion.

Expenditures

General government expenditures grew faster than revenues in real terms in the first half of the year, although growth was slower in the second quarter. General government expenditures grew by 6.1% in real terms in the first quarter, and by 2.2% in the second quarter. The increase in expenditures in the first six months of the year was 4.1% in real terms, with expenditures thus outstripping growth in revenues. The major factors in the strong increase in expenditures in the first quarter were expenditures on subsidies and the high payments into the EU budget, which did not begin last year until May. Year-on-year growth in revenues in June stood at 5.6% in real terms, with growth in expenditures on subsidies particularly prominent.

Wage expenditures grew in real terms in the first half of the year. Wage expenditures were up 3% in real terms in the first quarter, and 1.9% in the second quarter in comparison with

the previous year. Wage expenditures grew by 2.4% year-on-year in real terms overall in the first half of the year. Both growth in public sector employment and growth in the average gross wage in the public sector contributed a significant proportion of this increase. Year-on-year growth in public sector employment remained around 2% between January and June, with the health sector recording the highest rate (2.9%). The nominal year-on-year growth in the average gross public sector wage was 4.5% in the first half of the year.

Growth in current transfers was relatively high in both the first and second quarters, with expenditure on subsidies particularly prominent. Current transfers grew by 3% year-on-year in real terms in the first quarter, while growth was higher in the second quarter at 5.2% year-on-year. They were up 4.2% in real terms from the same period last year, while growth in expenditure on subsidies was particularly high, the expenditure rising by more than one-third.

Transfers to households were 2.3% higher in the first half of this year than in the same period last year. The fastest growth was recorded by family and parental benefits, while transfers for sick pay, unemployment transfers and transfers for war invalids and victims of war recorded the lowest growth.

In its revised closing accounts for 2004 the Health Insurance Institute (HII) recorded a deficit in the amount of SIT 9.7 billion, while in the first half of this year it recorded a surplus of SIT 4.7 billion. The projected surplus at the end of this year will be earmarked for reducing waiting times. The HII's general meeting approved the revised closing accounts for 2004 on 21 September 2005. The Institute recorded a deficit of SIT 9.7 billion in 2004. The largest revenue sources were tax revenues (80%) and transfer revenues (18%). The largest expenditures were current transfers (97%). Of these, the largest proportion was accounted for by healthcare services, drugs, medical aids, treatment abroad and wage substitutes for absence from work. The HII has declared a surplus of SIT 4.7 billion for the first half of this year. This surplus is partly the result of the introduction of the tax procedure act at the beginning of this year. The surplus of SIT 5.5 billion originally forecast for this year will be reallocated under the newly approved budget revision to additional programmes to reduce waiting times in the health sector.

Expenditure on pensions in the first eight months of the year was up approximately 2.6% in real terms from the same period last year. The rise reflects both an increase in the number of pensioners and the two pension increases made already this year. The number of pensioners was 1.2% higher in August year-on-year, with a 2.0% rise in the number of old age pensioners. In line with the new pension and disability insurance act, the shortfall in the annual supplement stipulated for this year by law was paid out to pensioners in August, for which reason the PDII incurred extra expenditure estimated at SIT 3.5 billion. The next pension increase this year will be made in line with the new act in November, applying from 1 October.

Investment expenditures are growing more slowly than last year. Investment expenditures fell by 4.4% year-on-year in real terms in the first quarter and by more than 5% in the second quarter. Overall they were 4.8% lower in the first half of this year than in the same period last year.

Public Debt and Guarantees

SIT billions	2002	2003	2004	2005 Mar.
Debt of the RS (in % of GDP)	26.7	25.9	25.8	25.8

(in % of GDP)	6.6	7.4	9.0	8.7
Guaranteed domestic debt	169	171	211	205
Guaranteed external debt	182	257	350	374

Source: Ministry of finance.

Slovenia's public debt amounted to 25.8% of GDP at the end of March. The proportion of external debt fell by more than 5 percentage points last year, and is expected to continue falling this year (eurobonds in the amount of SIT 120 billion matured in May). This trend is in line with the state budget financing programme.

The government will make an early repayment of the liabilities arising from the 5-year RS43 government bonds and will release the sixth issue of RS58 bonds and the fourth issue of RS60 bonds. The early repayment will be made on 17 October in a total amount of SIT 15.6 billion, the total nominal value of the bonds. The RS43 bonds were issued on 15 October 2002, at an interest rate of 3% above the TOM base rate. The Ministry of Finance will earmark revenues from the sixth issue of 3-year RS58 bonds with a fixed interest rate of 3.25% for the early repayment. The sixth issue of 3-year RS58 bonds totalled SIT 24.4 billion, while the fourth issue of 5-year RS60 bonds totalled SIT 24.5 billion.

5. BALANCE OF PAYMENTS

Current Account

There was a small surplus of EUR 7 million in the current account in July, and a total deficit of EUR 41 million was generated this year to July. The provisional figures for the period to June have shown a current account surplus of EUR 121 million. The largest factors in the change in the recording of results in the current account with the rest of the world were the annual revision of statistics and methodological changes. The largest changes were made in the estimate of imports of goods and reinvested earnings. Both acted to worsen the current account, with an increase in imports of goods recorded in the balance of payments and net outflows of capital to the rest of the world (for more, see frame).

The current rates of growth in imports and exports in goods and services have slowed in the last two months, with exports slowing more than imports. In July the current rate of growth in exports of goods and services stood at 11% on an annual basis, while that for imports was 14%. Exports grew by 7% year-on-year in July, and imports by 6%. The gap between year-on-year imports and exports, which had been 5 percentage points in June, thus shrank to just over 1 percentage point in July.

In July the cumulative gap between the year-on-year rise in exports of goods and services and the lower rise in imports reduced. Exports of goods and services totalled EUR 9,991 million in the first seven months of the year, up 12.1% from the same period last year, while imports were up 8.6% at EUR 9,856 million. The gap between the rises in imports and exports shrank to 2.5 percentage points. Despite the gap between import growth and export growth shrinking in recent months, results in trade of goods and services are better than in the same period last year. A surplus of EUR 135 million was generated, while in the same period last year there was a deficit of EUR 163 million.

July saw above-average growth in trade in goods, while the gap between import growth and export growth reduced. Exports of goods were up 7.7% year-on-year in July at EUR 1,204 million, while imports were up 6% at EUR 1,270 million. The gap between imports and exports, which amounted to more than 4 percentage points this year to July, more than halved to 1.7 percentage points.

Source: Bank of Slovenia

Since Slovenia joined the EU, growth in exports to EU member-states has been relatively stable and high, while growth in exports to non-EU countries has fluctuated from month to month. Exports to EU member-states were up 11.7% year-on-year in July, while exports to non-EU countries stagnated to remain at the level recorded in the previous year. On the import side the reverse was the case, with imports from EU member-states up 5.3% year-on-year and imports from non-EU countries up 9.5%.

With exports growing faster than imports, the deficit in trade in goods declined year-on-year by EUR 261 million to EUR 485 million. In particular the deficit with EU member-states shrank, falling by EUR 276 million year-on-year in the first seven months of the year to EUR 1,464 million, while the trade surplus with non-EU countries was almost unchanged at EUR 979 million.

The regional concentration of Slovenia's exports of goods rose over the first six months of the year. The proportion of goods exports going to European countries rose by 2 percentage points year-on-year in the first half of the year to 93%. The largest rises were in exports to EU member-states (15%) and to Russia (15.8%). Exports to former Yugoslav republics grew by 11.8%, less than the average, primarily as a result of falls of 4% in exports to Bosnia-Herzegovina and of more than 5% in exports to Macedonia. Exports to Croatia and Serbia-Montenegro recorded above-average growth of 16% and 25% respectively.

To a certain extent the dollar's fall against the euro was also a factor in the increase in the proportion of exports accounted for by European countries. Exports to Asia fell by more than 4% year-on-year, while exports to North and South America fell by 22%. Trade with these countries is usually conducted in dollars.

On the import side, changes in regional concentration were smaller. The proportion of total imports accounted for

by European countries fell by just over 1 percentage point year-on-year to 92%, primarily at the expense of an increase in imports from Africa and Asia.

The current rate of growth in exports of services slowed in July to 12% on an annual basis, while that for imports remained unchanged at 7% on an annual basis. Exports of services were up 9.7% year-on-year at EUR 1,686 million this year to July, while imports were up 8.1% at EUR 1,262 million. The result was a year-on-year increase of EUR 55 million in the surplus in trade in services to EUR 424 million.

On the services export side, the largest rise of 58% was recorded by exports of construction and assembly work. Exports of communications services grew slightly more slowly (25%). Exports of services connected with trade in goods, such as transport and miscellaneous business and technical services, rose by 12%, approximately the same as exports of goods. Despite a relatively modest increase in the number of foreign tourists and the number of overnight stays made by them, tourism revenues recorded solid growth of more than 9.8%. On the import side, with growth in imports of transport services and expenditure on travel abroad modest, the largest rise of just over 37% was recorded by imports of miscellaneous business and technical services. The largest rises were recorded by services connected with construction (architecture, engineering and

other services), which more than doubled, and payments for services connected with Slovenian companies' business abroad (advertising, fairs, and legal and accountancy services).

Net labour income and capital income recorded an outflow of EUR 154 million this year to July. There was a net inflow of labour income in the amount of EUR 96 million, but a net outflow of capital income of EUR 250 million. The largest rise of 35% in capital revenues was recorded by revenues from

investments in securities abroad, while on the expenditure side the largest rises were recorded by dividend payments and profit distributions, the latter having more than doubled to EUR 71 million, and payments of earnings on investments in securities, which rose by 37% year-on-year. Net transfers also improved in July, but there was still a cumulative outflow of EUR 23 million in the first seven months of the year.

Revision of balance of payments figures for 2002 to 2004 and onwards

In September the balance of payments figures for 2002 onwards were revised. The change was partly due to a change in methodology, and partly due to the annual overhaul and update of statistics.

The methodological changes relate primarily to the recording of interest in the balance of payments being brought into line with the international recommendations (Balance of Payments Manual 5th Edition). This involves the incorporation of income (interest) on certain debt instruments at the moment that it accrues (the principle of accrued interest), and not at the moment when it is actually paid (paid interest), the latter methodology having been used in Slovenia before the figures were revised.

The second methodological change relates to the calculation of the cif/fob coefficient used to adjust the statistical value of imports to the balance of payments value, and entails an estimate of the costs of transport and insurance from the exporter's border to the importer's border. The previous coefficient of 1.0393 was used from 1999 onwards. The new coefficient has been calculated on the basis of the average coefficients used for adjustment in the last five years, will be used from 2004 onwards, and at 1.0306 is lower than the previous coefficient.

During the overhaul of data sources, the largest change was in reinvested earnings for 2004, while there was a slightly smaller change in those for 2002 and 2003. At the same time as the release of the actual figures for 2004, there was also a change in the methodology for estimating reinvested earnings in the current year. From this year the average of the three previous years is used, but before a five-year average was used. With the switch to the new methodology, retrospective revisions of balance of payments figures will be smaller.

The final SORS data for 2004 was used for trade in goods, and this slightly increased the deficit in trade in goods.

The figures for capital transfers were also updated. On the capital transfer inflow side, non-residents wrote off a greater proportion of the value of imported goods (0.9%) in 2004 than in the previous year (0.6%). On the outflow side, residents wrote off an average of 1.9% of the value of exports in 2004, less than in 2003.

The revision of the figures and the methodological changes were most prominent in 2004. The current account deficit was increased by EUR 305 million, the most significant factor being the higher deficit in the balance of trade and the reinvested earnings realised in 2004. The methodological changes to these two items will continue to have an effect on the import and expenditure side of the current account in particular in this year and the coming years.

Source: Bank of Slovenia

Financial Account

Slovenia recorded a net inflow of EUR 235 million in its financial transactions with the rest of the world in July.

The surplus in the financial account in the first seven months of the year stood at EUR 462 million, or 3.5% of estimated GDP for the same period. Inflows are outstripping outflows primarily because of new borrowing abroad. Net inflows to the private sector amounted to EUR 879 million, while the general government sector made net payments in the amount of EUR 372 million.

The private sector increased its investments abroad by EUR 298 million in July, taking the increase since the beginning of the year to EUR 1,782 million. Since the second quarter there has again been strong growth in financing abroad via trade credits and loans. In comparison with the first seven months of last year, the largest growth is being recorded by portfolio investments and trade credits.

Purchases of foreign securities were again prominent among investments in July. The flow of portfolio investments abroad rose to EUR 139 million in July, taking the seven-month total to EUR 447 million, a year-on-year increase of 80%. The proportion of total financial investments abroad that they account for thus rose to one-quarter this year to July. Banks additionally made net purchases of EUR 135 million of foreign securities classified in quality terms as foreign exchange reserves.

Direct investments abroad remain behind last year's, with the proportion of equity investments rising. Slovenian banks and companies invested EUR 53 million abroad in July, taking investments this year to EUR 232 million. This year's di-

rect investments are 12% lower than in the same period last year, with the decrease in debt flows between affiliated companies a factor in this. Net claims against related companies abroad fell from EUR 152 million last year to just EUR 34 million this year, with loans to subsidiaries declining in particular. By contrast, investments in equity abroad have risen from EUR 104 million to almost EUR 200 million this year.

Financing abroad via trade credits strengthened in recent months. This year to July it reached EUR 379 million, up 40% from last year. With 60% growth EU countries were the main factor in this rise, and they are also recording the highest growth in exports of goods this year. Trade credits to former Yugoslav republics were just 10% higher at EUR 69 million, but it should be noted that the flows and growth cited refer only to companies unrelated in equity terms. An additional EUR 71 million of trade credits were approved for subsidiaries abroad (year-on-year growth of 4.2%). The former Yugoslav countries account for 86% of this total, with trade credits to this region having risen by 5.5%.

Signs: inflows or increases in liabilities (+), outflows or increases in claims(-). Increases in foreign exchange reserves (-), increases in debt (+). Sourced: Bank of Slovenia. 1) "Private sector" = non-government sector, thus including public sector organisations.

Lending abroad via loans continued to grow. As in previous months banks accounted for the majority of loans approved: the net flow of loans by companies amounted to just EUR 1 million in July, with banks accounting for the remaining EUR 46 million. Loans abroad have reached almost EUR 200 million this year, up 6% from last year, with the banking sector accounting for 80%.

Financial inflows to the private sector reached EUR 608 million in July, taking the total for the first seven months of the year to EUR 2,666 million. Borrowing by the banking sector was again the main factor in July's inflows. Only the instruments of borrowing changed: instead of loans, deposits by non-residents at banks and borrowing abroad via new bond issues were previously prevalent. The inflow of lending to the corporate sector also increased strongly in July.

Foreign direct investments in the first seven months of the year remained well below last year's. The inflow was EUR 36 million in July, and just EUR 39 million this year to July. Non-residents invested EUR 24 million in equity, or approximately EUR 100 million if the Belgian brewer's withdrawal from Slovenia is discounted. Debt-related claims and liabilities to non-resident owners are a more significant factor than equity in the volume of foreign investments. This year to July the net liabilities to non-resident owners deriving from loans and trade credits fell by EUR 104 million, the majority being short-term flows of great variability.

July's portfolio investments were the highest this year at EUR 133 million, and were one of the most important inflows in the month. The vast majority (EUR 130 million) consisted of financing by the banking sector via the issue of bonds

abroad. This year to July portfolio investments by non-residents in the banking sector were EUR 173 million, compared with EUR 202 million in the same period last year. Since November last year non-residents have also been investing more actively in corporate securities, having invested EUR 80 million in them this year to July.

In July the private sector recorded net borrowing abroad of EUR 154 million via loans. Unlike previous months banks accounted for a smaller proportion of this (EUR 54 million). The total net borrowing by banks exceeded EUR 1 billion in July. Companies and other financial organisations recorded net borrowing of EUR 99 million in the month. Given the high inflow this year and the net outflow last July, corporate loans in the first seven months of the year were 13% higher than last year (at the end of June the cumulative comparison showed a year-on-year fall). Despite this growth, when seeking finance companies are increasingly turning to domestic banks, from whom their net borrowing via loans has increased by 45% this year, of which foreign currency loans account for 65%.

The highest financial inflows from abroad in July were deposits by non-residents. After an increase of EUR 147 million in June, they rose by a further EUR 302 million in July, taking the total for the first seven months of the year to EUR 942 million. The majority are deposits by foreign banks, with domestic banks thereby obtaining an additional source of financing for companies.

With a net financial inflow and the current account in balance, total foreign exchange reserves increased by EUR 241 million in July to EUR 8,048 million. Despite an increase in recent months, both in absolute terms and as a proportion of GDP, the indicator measuring sufficiency of foreign exchange reserves declined by 2.3 percentage points in July. Thus total foreign exchange reserves at the end of July exceeded short-term debt by remaining maturity by 29.6%, which is a decline of more than 10 percentage points from the end of last year. Short-term debt rose to EUR 6,208 million in July, up EUR 269 million from June, primarily as a result of growth in short-term deposits by non-residents in the month. Total foreign exchange reserves rose by a further EUR 292 million in August to EUR 8,341 million.

External Debt

The gross external debt rose by EUR 473 million in July to EUR 17,486 million. The debt was up EUR 2,208 million from the end of 2004, with the banking sector accounting for 96% of this increase. Foreign loans and deposits by non-residents accounted for approximately EUR 1 billion of the bank debt, with borrowing via bond issues abroad accounting for a lesser proportion. In line with its policy of borrowing domestically, the government reduced its external debt by EUR 241 million this year to July, while companies and other financial organisations recorded an increase of EUR 350 million. The proportion of the external debt accounted for by banks was close to 40%, with the corporate sector accounting for just 2 percentage points less; at the end of 2003 the ratio was 26% to 46%.

With the Succession Fund's figures on claims against the former Yugoslavia being included in the amount of EUR 800 million, gross external claims rose, which exerted an effect of a decrease in the net external debt. At the end of July gross claims stood at EUR 15,764 million, up EUR 1,360 million from the end of last year. Unlike the external debt, this year's growth has been distributed among the sectors. Banks increased their gross debt claims by EUR 0.5 billion, companies and other financial organisations by slightly less (EUR 482 million), and the Bank of Slovenia by EUR 233 million. The main factor in the growth in gross claims at the Bank of Slovenia and, to a large extent, at banks, was the increase in foreign

exchange reserves, while main factor at companies was trade credits granted.

According to updated figures for gross external claims, the net external debt fell by approximately EUR 800 million. It stood at EUR 1,722 million in July, having risen by EUR 849 million in the first seven months of the year. This year only the banking sector has increased its net debt to the rest of the world (by EUR 1,609 million), all other sectors having improved their debt position against the rest of the world: the general government sector by repaying debt, the Bank of Slovenia by increasing its foreign exchange reserves, and companies and other financial organisations by expanding investments faster than borrowing abroad.

6. MONEY AND CREDIT

The negative impact of flows with the rest of the world and domestic credit activities are decreasing in significance within the structure of the issue of broad money.

Between March and May, net foreign assets (NFA), which indicate the contribution of balance of payments flows to broad money growth, fell by SIT 213.5 billion, while domestic credits increased by SIT 269.5 billion. Almost half of the fall in NFA was the result of the repayment of government eurobonds. Between June and August NFA increased by SIT 0.6 billion, while domestic credits increased by just SIT 43.2 billion. The low level of lending in this period is also the result of the repayment of RS06 government bonds in the amount of approximately SIT 80 billion.

Lending to the private sector is still relatively strong, but eased in the summer months, as a result of seasonal factors.

Between June and August growth in lending to the private sector amounted to SIT 134.4 billion, SIT 13.1 billion more than in the same period last year, but SIT 65.9 billion less than the March to May period. Lending to companies and other financial organisations rose by SIT 80.3 billion (compared with SIT 78.1 billion in the same period last year), while lending to households rose by SIT 54.1 billion (compared with SIT 43.4 billion). Between June and August the government repaid SIT 91.3 billion of debt (repayment of RS06 bonds), while during the same period last year it repaid SIT 65.1 billion. Year-on-year growth in domestic credits in the corporate sector remains stable; the maximum of 24.9% was recorded in April, while in August it was 23.6%. Year-on-year growth in lending to households fell from 25.3% in June (the highest this year) to 24.3% in August. Owing to the repayment of RS06 bonds year-on-year growth in lending to the general government sector fell from 22.0% in May to -0.5% in August.

In recent months non-bank sectors have recorded net borrowing of long-term tolar loans and made net repayments of short-term tolar loans, although they continue to borrow most in foreign currency loans. Between June and August non-bank sectors recorded net borrowing of SIT 131.5 billion in foreign currency loans and SIT 32.9 billion in long-term tolar loans. During the same period non-bank sec-

tors made net repayments of SIT 33.9 billion of short-term tolar loans. The proportion of the increase in total lending accounted for by foreign currency lending stood at 74% in the first quarter, 96% in the second quarter and 92% in July and August. Companies continue to borrow most heavily in foreign currency, while households and the government do so to a lesser extent. Year-on-year growth in foreign currency lending rose from 47.6% last December to 53.0% in August, but has remained stable in recent months. This year to August non-bank sectors had borrowed SIT 2.4 billion via short-term tolar loans and SIT 56.6 billion via long-term tolar loans. Year-on-year growth in short-term tolar loans fell from 5.1% in December to 1.4% in August, while that for long-term tolar loans fell from 13.7% to 11.0%.

Total lending to the corporate sector has been slowing in recent months.

The increase in total domestic and foreign lending to companies stood at SIT 174.1 billion in the first quarter, SIT 105.1 billion in the second quarter (compared with SIT 121.0 billion in the same period last year), and SIT 57.5 billion in July. Lending to the corporate sector was in line with the relatively strong economic growth of 2.6% year-on-year in the first quarter and 5.2% in the second quarter.

Direct lending to the corporate sector from abroad has been decreasing this year.

The proportion of total loans from abroad was 17.3% in the first quarter and just 9.0% in the second quarter. Financing from abroad accounted for almost one-third of loans last year. Corporate borrowing abroad amounted to SIT 168.7 billion last year, compared with just SIT 62.3 billion in the first seven months of this year. Corporate borrowing abroad was slightly higher in July at SIT 23.7 billion, which accounted for almost 40% of this year's borrowing abroad by companies.

Lending to households remains strong, with the year-on-year growth rate unchanged.

The increase in lending to households averaged SIT 17.3 billion each month in July and August, down slightly from the March to June period, when it stood at SIT 19.9 billion. This is partly connected to the lower volume of newly approved housing loans, as the year in which NHSS savers from 1999 could take out housing loans on its basis ended in June. This year to July foreign currency lending

accounted for more than 40% of household lending, with the remainder being in the form of long-term tolar lending. Year-on-year growth in total household lending stood at 24.3% in August, the same as the average year-on-year growth recorded in the second quarter. The largest rise was recorded by foreign currency lending, which was up more than 5 times over one year, partly because of the low basis.

The general government sector has been paying off debt at banks in recent months. This year to May the government recorded net borrowing of SIT 101.5 billion from banks, but between June and August it paid off SIT 91.5 billion of debt. The structure of the government's debt with banks has remained more or less unchanged this year, with the stock of foreign currency loans having risen by SIT 7.4 billion and the stock of short-term tolar loans by SIT 18.2 billion, and the stock of long-term tolar loans having fallen by SIT 15.2 billion.

Growth in M1 has been slowing since the beginning of the year. M1 remains at approximately its June level, having finished August at SIT 1,060.0 billion. Year-on-year growth on M1 is gradually falling, from 27.8% last December to just 17.6% this August. This trend represents a normalisation after strong growth in M1 at the end of last year, which was the result of seasonal factors (high consumption) and relatively high household income.

The broad monetary aggregates fell in May and June, but rose slowly in July and August. Year-on-year growth in M2 fell from 7.5% in April to 5.1% in August, while year-on-year growth in M3 fell from 8.2% to 6.5% over the same period. The principal reasons for the decline in the broad monetary aggregates in

May and June were the repayment of government eurobonds made to the rest of the world and the repayment of RSO6 bonds (unpaid foreign currency deposits) made to banks.

Tolar time deposits are increasing more rapidly than foreign currency deposits. Tolar time deposits at banks increased by SIT 61.9 billion in July and August, while foreign currency deposits increased by SIT 24.5 billion over the same period. Year-on-year growth in tolar time deposits rose from -7.3% last December to 3.9% this August. Over the same period year-on-year growth in foreign currency deposits fell from 14.2% to 6.5%. The faster growth in tolar time deposits than in foreign currency deposits is the result of higher tolar interest rates under the conditions of the stable exchange rate.

Tolar time deposits with a maturity period of up to 90 days in particular have risen in recent months. Deposits with a maturity period of up to 30 days increased by SIT 11.3 billion in July and August, while those with a maturity period of one to three months increased by SIT 46.0 billion. Long-term deposits continue to decline, having fallen by SIT 22.2 billion this year to August, and by SIT 5.5 billion in July and August alone.

The average maturity period of tolar deposits remained almost unchanged. M1 fell as a proportion of M2 from 37.1% in May to 37.2% in August, while the proportion of M2 accounted for by long-term tolar time deposits fell from 10.7% to 10.4%.

Source: Bank of Slovenia

7. BANKING SECTOR

Year-on-year growth in the banking system's total assets is falling, and had reached 19.1% at the end of August.

Total assets have risen by SIT 773.4 billion to SIT 6,451.9 billion this year. Lending to non-bank sectors, which rose by SIT 438.9 billion, accounted for the largest proportion of growth in total assets (57%). Of this lending, the largest rises were recorded by lending to companies (SIT 262.3 billion) and lending to households (SIT 129.1 billion). Two-thirds of the increase in total assets this year on the liabilities side came from liabilities to foreign banks, while deposits by non-bank sectors accounted for just 19%. The current rate of growth in total assets has averaged 1.6% this year, and was down slightly in August from June and July.

Large banks were particularly notable for their current rate of growth in August. This group of banks saw their total assets rise by 2.3% in August, while those of medium-sized banks rose by 1.7% and those of small banks fell by 1.0%. The year-on-year growth rates of large and medium-sized banks have been rising, while that of small banks fell in August.

The market shares of the five largest banks in terms of total assets and lending have fallen in the last year. The

market share of the five largest banks (the CR 5) in terms of total assets stood at 64.1% in August, having fallen by 1.8 percentage points in the preceding 12 months. In terms of lending to non-bank sectors, where the five largest banks account for 63.1% of total lending, the decline in the last year was 2.1 percentage points, while in terms of household lending the proportion has fallen by 2.5 percentage points to 63.5%. The largest decline in the last year was recorded by lending to companies, where the proportion accounted for by the five largest banks has fallen by 3.4 percentage points in the last year to 63.6%.

Lending to non-bank sectors remains relatively high, and in particular there is no sign of household lending slowing.

The average monthly increase in lending to non-bank sectors this year is SIT 54.9 billion, compared with SIT 36.3 billion for lending to companies and SIT 16.2 billion for household lending. Lending to companies is more than one-fifth higher than last year's average, while household lending is up 43%. Year-on-year growth in lending to companies remains above 23%, while for household lending it rose again by 0.6 percentage points from July to stand at 24.3% in August. While the total increase in household lending last year amounted to a high SIT 135.5 billion, this year's cumulative increase had already reached SIT 129.2 billion by the end of August, and even with a decline in the current rate of growth it will still strongly exceed last year's by the end of the year. Growth in lending to the general government sector is barely positive this year, and the year-on-year figure is negative (-15.7%). Growth in such lending has been negative in the last three months. This year banks have in particular increased their investments in Bank of Slovenia tolar bills (by SIT 146.4 billion) and other securities (by SIT 95 billion). There have been falls in the volume of government securities (by SIT 0.3 billion) and foreign currency bills (by SIT 74 billion). The volume of securities at banks fell by SIT 31 billion in August.

Foreign currency lending to non-bank sectors prevailed significantly over tolar lending.

By the end of August foreign currency loans had accounted for 88% of this year's increase in lending to non-bank sectors, with companies making net repayments of tolar bank loans and recording net borrowing in foreign currency. The proportion of financing accounted for by pure foreign currency lending is also relatively high for

households, where foreign currency lending accounts for close to 43% of this year's total increase in lending. The high current rate of growth in foreign currency lending (year-on-year growth of 53.6% for non-bank sectors overall, 48.8% for companies and 453.9% for households) is bringing a constant increase in the proportion of the total stock of lending accounted for by foreign currency. Foreign currency lending accounted for 52.8% of lending to companies in August, and 41.5% of overall lending to non-bank sectors, while the proportion of household lending accounted for by foreign currency lending is still relatively low at 8.8%.

Growth in deposits by non-bank sectors strengthened slightly, but remains far behind growth in total assets. Banks' borrowing from banks abroad remains high. Year-on-year growth in deposits by non-bank sectors strengthened by 1.3 percentage points in August to 7.8%, primarily owing to growth in deposits by companies (SIT 18.8 billion), other financial organisations (SIT 10.6 billion) and the general government sector (SIT 7.7 billion), while household deposits at banks have again stagnated in the last two months. By contrast, borrowing via foreign banks was high in August at SIT 54.6 billion, albeit lower than in June (SIT 176.7 billion) and July (SIT 72.3 billion). Financing via foreign banks has accounted for two-thirds of the increase in total assets, compared with just 19% contributed by deposits by non-bank sectors. Banks continue to use resources of foreign banks to compensate for weak domestic saving, with such liabilities recording year-on-year growth of 62.7% in August. With the current rate of growth in bank financing continuing to favour borrowing at foreign banks, the proportion of banks' total liabilities accounted for by such liabilities continues to rise, and the proportion of deposits by non-bank sectors continues to fall. In the year to the end of August the proportion of the banking system's total liabilities accounted for by liabilities to foreign banks rose by 7.7 percentage points to 23.7%, while the proportion accounted for by deposits by non-bank sectors fell by 6.6 percentage points to 56.9%. There has been no significant change recently in the currency or maturity structure of deposits by non-bank sectors. The proportion of sight deposits rose by 0.5 percentage points this year to August to 35.3%, while the proportion of short-term deposits stood at 57.6% and the proportion of long-term deposits at 7%, having fallen 0.7 percentage points this year. There is a similar situation in foreign currency deposits, which have long accounted for just over one-third of deposits by non-bank sectors (34.2% in August). As part of the process of the equalisation of tolar and foreign currency interest rates, shifts in deposit structure towards foreign currency deposits can be expected in the future.

Growth in banks' net interest income is positive, while higher non-interest income is primarily the result of previous months. The main factor in the increase in banks' gross income (11.7%) was higher net non-interest income, primarily as a result of net financial transactions in previous months.

Year-on-year growth in net fees and commissions was slightly higher in August than in July, but at 8.5% it was more than 10 percentage points behind growth in total assets. The positive growth of 3.8% in net interest income is relatively weak. With growth in banks' gross income slower than growth in total assets, the financial intermediation margin per average assets has fallen this year; the year-on-year rate for the former was 11.7%, while for the latter it averaged 15.9%.

Growth in operating costs remains moderate, with cost of provisions rising in recent months in particular. Operating costs have risen by 5.6% this year, and labour costs are also recording moderate growth of 5%. Growth in costs of provisions has risen in recent months, and was 24.1% year-on-year at the end of August. Higher costs of provisions coincide with high lending activity by banks.

The moderate trend of decline in banks' interest rate margin remains. The net interest margin stood at 2.6% in the period to the end of August, 0.3 percentage points down from the same period last year. However in the last two months the interest margin calculated for the preceding 12 months per total assets has again fallen, reaching 2.5% in August. The rise in the non-interest margin in recent months to just over 1.9% has not compensated for the decline in the interest margin, and the financial intermediation margin is thus approaching 4.4%.

Banks generated pre-tax profit of SIT 50.1 billion in the first eight months of the year, down just under one-fifth from the same period last year. The profitability indicators are a fraction higher this year than last year over the same period. Return on assets is up 0.1 percentage points this year at 1.3%, while return on equity is up 1.4 percentage points at 16.9%. Net interest as a proportion of banks' gross income is relatively low at 55.5%, in particular owing to high non-interest income from financial transactions in previous months. Operating costs as a proportion of banks' gross income were 3.6 percentage points lower than during the same period last year, the main factors in the decline being moderate growth in operating costs and higher costs of provisions. Coverage of operating costs by non-interest income was 81.8% in the first eight months of the year, 12.4 percentage points higher than the same period last year. Operating costs as a proportion of total assets were 0.3 percentage points lower this year at 2.4%.

B. MONETARY POLICY

1. EXCHANGE RATE

The excess supply of foreign exchange on the markets continued in the third quarter. It was relatively modest in August at just EUR 44 million, but rose to EUR 125 million in the first 20 days of September. The net excess supply of foreign exchange reached a total of EUR 918 million this year, while last year there was a net demand of EUR 540 million on the foreign exchange markets. Apart from the improvement in the current account, the main factors in this year's rise in the supply of foreign exchange are the increase in net financial inflows arising from borrowing abroad by banks, and the increase in deposits by non-residents at domestic banks and in investments in domestic securities.

Transactions on the spot foreign exchange market were the largest factor in the overall excess supply in the summer. The excess supply of foreign exchange stood at EUR 288 million in August. The largest contributions towards excess supply on the spot foreign exchange market in August came from non-residents (EUR 178 million) and domestic companies (EUR 68 million). There has been an above-average rise in the supply of foreign exchange from private individuals this year, and August's total of EUR 42 million was both the highest monthly sum this year and more than the total supply of foreign currency from private individuals in the whole of 2004. Net demand for foreign currency at exchange offices this year to August was down more than one-quarter from the same period last year. These changes came under the influence of the good results in tourism, where growth in revenues is more than 7 percentage points faster than growth in expenditure.

The excess supply of foreign exchange on the market increased by EUR 160 million in the first 20 days of September. Investments by non-residents in securities on the stock exchange rose strongly in September, by more than EUR 90 million. Portfolio investments were prevalent, with non-

residents purchasing more than EUR 75 million of RS58 and RS60 bonds. With domestic interest rates relatively stable, cuts in interest rates in new EU member-states could make investments in securities on Slovenia's financial market increasingly attractive to non-residents.

Net demand for foreign exchange on the forward market was above-average in August. At EUR 227 million it was more than three times higher than the average of the previous two months. Banks sold EUR 255 million of foreign exchange to non-residents on the forward market, and purchased EUR 28 million of foreign exchange from domestic companies.

This year transactions between banks and non-bank sectors are the most important channel for increasing the potential supply of foreign exchange on the market. In August the potential supply of foreign exchange increased by EUR 165 million. It reached EUR 1,318 million this year to August, and was just under three times higher than in the same period last year. Growth in foreign currency loans to non-bank sectors was the largest factor in the increase in potential supply of foreign exchange.

1) Basket/effective exchange rate: basket of 7 currencies of Slovenia's main foreign trade partners (excluding Croatia), weighted by shares in Slovenian goods trade. From January 2002 onwards three currencies are taken into account (EUR, USD, CHF). Sources: BoS, Statistical Office of the Republic of Slovenia and various foreign sources.

Transactions between banks and the Bank of Slovenia in August increased the potential supply of foreign exchange on the market. In August banks increased their stock of reverse foreign exchange swaps by EUR 149 million, and reduced their stock of subscriptions to foreign exchange bills by EUR 244 million. Overall there was a net increase of EUR 95 million in the potential supply of foreign exchange from transactions between banks and the Bank of Slovenia. In the second half of September the Bank of Slovenia made an outright purchase of foreign exchange from banks and thus reduced supply on the foreign exchange market by approximately EUR 490 million.

The nominal euro exchange rate remained relatively stable on the spot foreign exchange market in the summer.

In August the exchange rate averaged SIT 239.56 on the spot market, 0.03% below the central rate.

2. INTEREST RATES

The Bank of Slovenia last altered the interest rates of its instruments on 8 April this year. It raised the reverse foreign exchange swap rate and the refinancing rate by 0.25 percentage points to 1.5% and 3.5% respectively. The Bank of Slovenia's other tolar interest rates have remained unchanged since Slovenia joined the ERM II. The differential between the interest rate on 60-day tolar bills and the ECB refinancing rate remains 2 percentage points.

The interest rate on the interbank market climbed above this year's average in August. The interest rate on the interbank deposit market rose for the third consecutive month. The rise in June and July took the rate back to the level of 3.75% seen three months before, while in August there was a further rise of 0.09 percentage points to 3.84%. The overnight placements rate (Sionia) also rose to the same level. The interbank interest rate curve changed in August: quoted interest rates rose slightly (0.03 percentage points) on shorter maturities, but declined by the same amount on longer maturities.

Interest rates on treasury bills were reasonably stable in August, with minor fluctuations in both directions. The

average monthly interest rate on 1-month treasury bills changed only fractionally between June and August, from 3.66% to 3.67%. At the first three auctions in September interest rates moved slightly higher: with demand outstripping supply by 1.6 to 1.8 times, interest rates ranged from 3.69% to 3.71%. In August the interest rate on 3-month treasury bills rose slightly: with demand outstripping supply 1.6 times, the rate was up 0.06 percentage points at 3.70%, while at the auction for 6-month treasury bills the interest rate fell slightly from June to 3.75%.

Banks' declared interest rates remain mostly unchanged. Banks' tolar interest rates on short-term deposits have been unchanged since last September, but September brought another cut, the second in the last year, in interest rates on deposits of more than one year, the change being 0.2 percentage points. Among lending rates, only the nominal tolar interest rate on short-term consumer loans fell, by 0.1 percentage points to 7.6%. Interest rates on housing loans declined by the same amount to 6.7%. Over the course of one year nominal tolar lending rates have declined by between 0.3 and 0.5 percentage points, the exception being housing loans, which have got just 0.1 percentage points cheaper during the same period.

External sector consists of non-residents.

Residents of the Republic of Slovenia are defined as:

- companies and other legal entities with a registered office in the Republic of Slovenia, except their branches abroad;
- branches of foreign companies entered in the Companies Register of the Republic of Slovenia;
- sole proprietors or natural persons, independently performing business activities as their prime occupation, with a registered office in the Republic of Slovenia or having permanent residence in the Republic of Slovenia;
- natural persons with permanent residence in the Republic of Slovenia;
- natural persons temporarily residing in the Republic of Slovenia holding a residential or working visa valid for no less than six months;
- diplomatic, consular and other representative offices of the Republic of Slovenia abroad financed from the Budget as well as Slovene citizens employed at these representative offices and their family members.

All other persons and entities shall be deemed non-residents.

Domestic sector is broken down to monetary and non-monetary sector.

Monetary sector consists of the Bank of Slovenia and commercial banks. Commercial banks (hereinafter "banks") are deposit money banks that accept sight deposits and have banking licenses granted by the Bank of Slovenia. Only domestic banks, owned by residents or non-residents, are included.

Non-monetary Sector is further divided into following sub-sectors: Non-monetary financial institutions, General Government, Individuals, Enterprises and Non-profit institutions.

Non-monetary financial institutions include Savings banks, Co-operatives and other financial institutions.

General Government comprises Central Government and Other General Government. **Central Government** mainly consists of the Budget. **Other General Government** contains local communities and entities established by General Government - institutions, funds, companies, clubs and other societies engaged in education, health, culture, social insurance, trade unions and other organizations.

Households (Individuals) include resident individuals.

Enterprises comprise firms in private or public ownership or control, except for those included in the General Government.

Non-profit institutions consist of all entities, not included in any other sector.

Characteristics of the data

Data present stocks on assets and liabilities at the end of the period.

Data on stocks nominated in foreign currencies are converted into Tolars using Bank of Slovenia end of period middle exchange rate.

Data in tables are not seasonally adjusted.

Table: Republic of Slovenia: general information

Table shows basic general data on Slovenia and its economy. In the "latest actual" column the latest available data for the current year are published. Data sources for the table are Bank of Slovenia, Ministry of Finance and The Statistical Office of the Republic of Slovenia.

1. MONEY AND BANKS

Last published data are preliminary.

Sectorization of banks' data as from April 30, 1999

For data from April 30, 1999 on a sectorization has been implemented according to **Regulation on Introduction and Implementation of Standard Classification of Institutional Sectors**, (hereinafter "SKIS") - Official Gazette 56/98. SKIS which implemented a national standard for economic sectorization is based on European System of Accounts 95 and is in accordance with System of National Accounts 93.

According to SKIS the sectors of the economy are: 1.) Non-financial corporations, 2.) Financial corporations (central bank, commercial banks, other financial institutions), 3.) General government, 4.) Households, 5.) Non-profit institutions serving households and 6.) External Sector (non-residents)

There has been no change regarding definition of *Non-resident*.

Domestic sector is broken down to monetary sector and non-monetary sectors.

Monetary sector consists of the Bank of Slovenia and commercial banks. Commercial banks (hereinafter "banks") are deposit money banks that accept sight deposits and have banking licenses granted by the Bank of Slovenia. Domestic banks, owned by residents or non-residents, are included.

Non-monetary Sectors are: Non-financial corporations, Non-monetary financial institutions, General government, Households, Non-profit institutions serving households.

Non-financial corporations are legal persons - market producers of goods and non-financial services.

Non-monetary financial institutions consist: of Savings banks, Co-operatives and *Other financial institutions*. **Other financial institutions** are: 1. Other financial intermediaries, except insurance corporations and pension funds (mutual funds, investment funds and financial leasing comp.), 2. Financial auxiliaries (securities brokers, stock exchanges) and 3. Insurance corporations and pension funds.

General government consists of: 1. Central government (administrative departments of state and central government agencies), 2. Local government (local administration, local agencies) and 3. Social security funds.

Households: resident individuals as consumers and resident individuals as sole proprietorships and partnerships being market producers and having no independent legal status. The data of the latter have been prior to April 30, 1999 included in the sector Enterprises.

Non-profit institutions serving households are clubs, political parties, trade unions, churches or religious societies, humanitarian and charity organizations, professional societies.

Table 1.1.: Monetary Aggregates

Table 1.1 shows stock data at the end of month for base money, monetary aggregates M1, M2 and M3, calculated according to the national definition and according to the harmonised definition of the European Central Bank (hereinafter: ECB).

The definition of base money is define as the sum of: *Banknotes in circulation, Banks' settlement accounts, Overnight deposit and Other deposits at the Bank of Slovenia* (Savings banks' settlement accounts, Savings banks' and Savings and loan undertakings' reserve accounts, transactional accounts of the Central and Local Government).

Data sources are banks' and Bank of Slovenia's bookkeeping data, which refer to the end of the month.

Calculation of monetary aggregates according to the national definition is shown on the liabilities' side of Table 1.2: Monetary Survey – Consolidated Balance Sheet of the Monetary System (See methodological notes referring to Table 1.2).

Harmonised monetary aggregates for Slovenia are calculated according to ECB's definition of harmonised monetary aggregates of euro area, which is evident from documents published on web pages of the ECB (<http://www.ecb.int>). Main differences between the two definitions of monetary aggregates are as follows:

- limited maturity of items included (harmonised aggregates include liabilities of up to 2 years only),
- equal treatment of the foreign exchange liabilities (which are, in harmonised aggregates, included into adequate items together with those in domestic currency),
- status of the monetary neutral sector (the central government in the harmonised aggregates has the status of a monetary neutral sector) and
- inclusion of the money market fund shares / units into M3.

Composition of harmonised monetary aggregates, as defined by the ECB is:

- HM1 contains *currency in circulation* and *overnight (sight) deposits*.
- HM2 includes beside HM1 also *deposits with agreed maturity of up to 2 years* and *deposits redeemable at notice of up to 3 months*.
- HM3 includes HM2, *repurchase agreements* and *debt securities with a maturity of up to 2 years*. *Money market fund shares / units* financial instrument, which is according to ECB's definition also part of HM3, will be included in calculation when such institutions appear in Slovenia.

HM2 and HM3 are, for the period prior to July 2002, partly calculated as estimation, because of the unavailability of relevant bookkeeping breakdowns.

Table 1.2.: Monetary Survey - Consolidated Balance Sheet of the Monetary System

Table 1.2 shows consolidated balance sheet of all banks' and Bank of Slovenia at the end of the month. Data for banks are aggregated.

Domestic assets consist of banks' and Bank of Slovenia's claims on General Government arising from succession to the former SFR Yugoslavia and the bank rehabilitation program, and claims from loans and securities on other non-monetary sectors. Claims from succession and the bank rehabilitation program represent: claims of the Bank of Slovenia on the Succession Fund of the Republic of Slovenia (on account of the former National Bank of Yugoslavia Dinar cash), counterpart claims for Bank of Slovenia liabilities to the International Monetary Fund, government guaranteed bank rehabilitation bonds, government bonds for unpaid foreign currency deposits and claims on the former National Bank of Yugoslavia for foreign currency deposits.

Other assets include fixed assets of banks and of the Bank of Slovenia and some other items (doubtful claims, etc.).

In September 2003, the liability part of the Table changed due to methodological changes in the calculation of monetary aggregates under the national definition, because of gradual harmonisation with the definitions of the European Central Bank (changes were made to all time series).

To aggregate M1, a vista Savings deposits at banks were added, and therefore, it consists of currency in circulation and demand deposits at banks (including a vista Savings deposits) as well as at the Bank of Slovenia.

To aggregate M2, Tolar restricted deposits and securities in Tolar including subordinated debt were added, so that the aggregate consists in addition to M1 also of Tolar time deposits at banks, and Government time deposits at the Bank of Slovenia and of Tolar securities.

To aggregate M3, other foreign currency liabilities to central government and securities in foreign currency were added, so that M3 consists of M2 and foreign currency deposits and securities at banks.

Other liabilities consist of capital and reserves of banks and of the Bank of Slovenia and also include some other items.

In the Table as from April 30, 1999 in conformity with SKIS, items of assets and liabilities to other general government mean assets and liabilities to both Local Government and Social Security Funds. By analogy, enterprises mean non - financial corporations and non - profit institutions serving households, and individuals mean households.

From July 31, 1996 onwards, the data for Komercialna banka Triglav are no longer included in banks' data due to its bankruptcy.

Foreign assets/Bank of Slovenia and *Foreign assets/Deposit money banks* were changed because of changes in Tables 1.3. and 1.4. for the period from April 2000 onwards.

Table 1.3.: Balance Sheet of the Bank of Slovenia

The Table shows the Bank of Slovenia's assets and liabilities at the end of month.

Foreign Assets consist of: foreign currency, deposits abroad (sight and time deposits, from April 2000 on also foreign exchange deposits held by BS on the basis of repurchase agreements) first class securities of foreign issuers, monetary gold, reserve position and SDR holdings at the International Monetary Fund and other claims. *Other claims* mainly include balances on fiduciary accounts and with international financial organization.

Because of consolidation of statistical and bookkeeping records in February 2003, *International monetary reserves* are not presented as subitem of Foreign assets. International monetary reserves are shown in Tables 3.12. and 1.9..

Claims on General Government consist mainly of net claims on the National Bank of Yugoslavia taken over by the Succession Fund of the Republic of Slovenia. Claims on the state budget, which are the counterpart of the succeeded liabilities to the International Monetary Fund, are also included.

Repurchase agreements include loans extended to banks based on securities and foreign currency (currency swap). From April 2000 on the amount of the foreign currency swap is shown as a part of the foreign assets of the Central Bank, because of the gradual permanent purchase of foreign currency from the part of Central Bank. In accordance to this are claims based on currency swap with domestic banks shown for the period up to March 2000 in the item *Repurchase* and thereupon in the item *Deposits*.

Other claims include some Bank of Slovenia's small deposits with banks and advance payments to the banks for repayments of Bank of Slovenia bills sold to other buyers through banks as agents.

General Government Deposits comprise deposits of Central Government budget.

Restricted deposits mainly result from deposits earmarked for import payments and deposits covering letters of credit, guarantees and credits taken abroad.

Money transfers in transit comprise money in transit.

Revision in time series caused changes in items *Deposits/Enterprises* and *Deposits/Nonmonetary financial institutions* for the period from February 1998 on. Whereas item *Deposits/Other demand deposits*, which represents the sum the mentioned two remains unchanged.

Table 1.4.: Balance Sheet of Deposit Money Banks

The Table summarizes data on assets and liabilities of banks at the end of the month.

Demand deposits comprise giro accounts of enterprises and non-profit institutions, General Government, non-monetary financial institutions and giro and current accounts of households (see Table 1.6.).

Savings deposits include short and long-term tolar savings deposits of households (see Table 1.6.).

Time deposits consist of short and long-term time deposits of households, General Government, non-monetary financial institutions, enterprises and non-profit institutions (see Table 1.6.).

Restricted deposits represent deposits of enterprises and non-profit institutions, General Government and individuals to be used for money transfers to foreign countries or in cover of letters of credit, loans taken abroad or euro-checks, and can also be used for foreign currency exchange office transactions.

Note 1: In June 1996 foreign liabilities of banks for the undue foreign debt of former SFR Yugoslavia in the amount of SIT 49,027 million were taken over by the Government. Liabilities of banks to the Government were increased for the same amount. The banks decreased their foreign liabilities and claims on the Government for the part of matured allocated debt which they had been repaying to the government fiduciary account since January 1994 totalling SIT 18,078 million.

Bank of Slovenia's claims on and liabilities to banks are equal to the corresponding items in the banks' aggregated balance sheet with few exceptions: Item 'Reserves' (Giro and reserves accounts) on the assets side of banks' balance sheet is almost the same as item 'Deposits of banks' (Giro and reserves accounts, foreign currency deposits) on the liabilities' side of the Bank of Slovenia's balance sheet (Table 1.3.). Similar applies to items 'Liabilities to the banking system' arising from the Bank of Slovenia loans and 'Claims on domestic banks' based on loans in the Bank of Slovenia balance sheet (Table 1.3.). Discrepancies result from differences in accounting accuracy.

In February 2003 were items *Currency and Deposits* and *Loans from BS* diminished by the amount - claim i.e. liabilities based on currency swap of central banks with domestic banks, for period from April 2000 on. (More in Methodological notes for Table 1.3. - *Repurchase*). Total assets i.e. total liabilities were diminished accordingly.

Claims on and liabilities to domestic non-monetary sectors are shown in detail in Tables 1.5. and 1.6. Foreign assets and foreign liabilities are shown in detail in Tables 1.7. and 1.8.

Table 1.5.: Deposit Money Banks' Claims on Domestic Non-monetary Sector

The Table shows banks' claims resulting from loans and securities classified by domestic non-monetary sectors, which are also represented in Table 1.4. in item 'Claims on non-monetary sectors - Total'.

As from April 30, 1999 SKIS has been implemented in the sectorial distribution of the economy and therefore:

- the sector *Enterprises and non-profit institutions* comprises the data on SKIS Sectors *Non financial corporations* and *Non-profit institutions serving households*;
- the sector *Central government* comprises the data on SKIS subsector *Central government*;
- the sector *Other general government* comprises the data on SKIS subsectors *Local government* and *Social security funds*;
- the sector *Individuals* comprises the data on SKIS sector *Households*;
- the sector *Non-monetary financial institutions* comprises the data on *Savings banks* and *Savings cooperatives* as well as the data on SKIS sector *Other financial institutions*.

Marketable securities are long or short-term securities acquired and held by a bank with the intention of reselling them in the short term.

Investment securities are long or short-term securities acquired and held for yield or capital growth purposes and are usually held to maturity.

Table 1.6.: Deposit Money Banks' Liabilities to Domestic Non-monetary Sector

The Table shows banks' liabilities from deposits of domestic non-monetary sectors which correspond to the 'Liabilities to non-monetary sectors - Total' in Table 1.4.

As from April 30, 1999 SKIS has been implemented in the sectorial distribution of the economy and therefore:

- the sector *Enterprises and non-profit institutions* comprises the data on SKIS Sectors *Non financial corporations* and *Non-profit institutions serving households*;
- the sector *Total General government* comprises the data on SKIS sector *General government*;
- the sector *Individuals* comprises the data on SKIS sector *Households*;
- the sector *Non-monetary financial institutions* comprises the data on *Savings banks* and *Savings cooperatives* as well as the data on SKIS sector *Other financial institutions*.

Table 1.7.: Deposit Money Banks' Claims to Non-residents

The Table shows banks' claims to non-residents by currency- Tolars and foreign currencies. Deposit Money Banks' Claims to non-residents are shown in Table 1.4. in item 'Total - Foreign assets'.

In February 2003 was item *Deposits* diminished by the amount - claim based on currency swap of domestic banks with central banks, for period from April 2000 on. (More in Methodological notes for Table 1.3. - *Repurchase*). Item Total claims on non-residents was diminished accordingly.

Table 1.8.: Deposit Money Banks' Liabilities to Non-residents

The Table shows banks' liabilities to non-residents broken by currency- Tolars and foreign currencies. Deposit Money Banks' Liabilities to non-residents are shown in Table 1.4. in item 'Total - Foreign liabilities'.

Table 1.9.: Bank of Slovenia 10-day balance sheet

In April 2002 the definition of base money has been changed to the sum of: *Banknotes in circulation*, *Banks' settlement accounts*, *Overnight deposit* and *Other deposits at the Bank of Slovenia* (Savings banks' settlement accounts, Savings banks' and Savings and loan undertakings' reserve accounts, transactional accounts of the Central and Local Government).

The data time series have been recalculated according to the change in definition.

The off balance items *Buy/sell foreign exchange swap* and *Sell/buy foreign exchange swap* are from April 2003 on are included in the table.

Bank of Slovenia 10-day balance sheet together with off balance items is in terms agreed for publication shown on web page:

http://www.bsi.si/html/eng/financial_data/hit/balance_bs_dekadna.html

2. FINANCIAL MARKETS

Interest rates (Table 2.1. - 2.6.)

Annual interest rates.

r = real rate over Tolar indexation clause

r(D) = real rate over foreign exchange indexation clause

n = overall nominal rate

TOM = Tolar indexation clause

EUR = foreign exchange clause

Table 2.1.: Bank of Slovenia Interest Rates

Lombard loan: Within the framework of standing lombard facility Bank of Slovenia provides one-day lombard loans to banks and savings banks with securities used as collateral. The pledged securities should amount to 110% of the amount of lombard loan.

Repo interest rate for the temporary purchase of treasury Bills, tolar and foreign currency Bank of Slovenia's Bills with obligatory repurchase in 7 days was the weighted arithmetic average of daily repo interest rates until March 2004 (effective interest rate). The new 7-day repo was introduced in March 2004, it is offered on a closed basis. The interest rate announced is the latest valid interest rate.

Interest rate on banks' obligatory reserves: 1 percent per year since October 1991.

The overnight-deposit interest rate is an interest rate applying to the deposits placed by banks and savings banks on an overnight term with the Bank of Slovenia.

Long-term deposit at Bank of Slovenia has been established in July 2004. Variable interest rate refers to 60-day tolar bills' interest rate, increased by 0,2 percentage points.

Tolar bills are registered securities subscribed by banks and savings banks with maturity of 60 and 270 days. 60-day bills are offered on a permanent basis, 270-day bills were sold by auction till February 2004, afterwards are offered on a closed basis. Interest rates for tolar bills are nominal given, in the case of auctions they are effective rates. Offers of 270-tolar Bills have been frozen since November 2004.

Foreign currency bills are transferable registered securities not issued in series. They are offered on permanent basis and can be purchased by banks (by other legal persons through banks till 3rd May 2000). They are sold for Euros (till 16.02.1999 for German Marks) or US Dollars at a discount with maturities of two to four months.

Penalty rate is generally used in cases of overdue payments. The penalty rate is determined by the Law on the legal penalty rate since 28.06.2003.

Interest rates for a certain type of instrument in the table are those last valid in a period (except in the case of effective interest rates). The annual averages of interest rates are computed as simple arithmetic averages of monthly data, if such data are available.

Table 2.2.: Interbank Money Market Rates and Indexation Clause

Interbank market

The figures are annual nominal interest rates for unsecured Slovenian tolar deposits on the Slovenian interbank market. Interest rate for overnight deposits (SIONIA) is weighted average interest rate for overnight deposits. Interest rate for deposits till 30 days is weighted average interest rate for deposits with maturity till 30 days.

The annual averages of interbank interest rates are computed as simple arithmetic averages of monthly data.

Tolar indexation clause

Tolar indexation clause (TOM) is annual interest rate, calculated by the Statistical Office of Republic of Slovenia and used for preserving the value of financial liabilities and assets in domestic currency.

TOM (monthly): since 5th August 1995: average of previous 3 months' inflation (until June 1995 indexation was based on so called R that was equal to the previous months' inflation rate, from 1st June till 4th August 1995 indexation was based on the average of previous 3 months' inflation); since February 1996: 4 months; since December 1996: 6 months; since May 1997: 12 months.

Financial liabilities and assets in domestic currency, with maturity less than 1 year, are not revalued since July 2002.

Foreign exchange indexation clause

Monthly rate is growth rate of Bank of Slovenia's end of month exchange rate for EUR (DEM) or USD.

Annual rate is computed from monthly rate on the conform basis, taking into account the actual number of days in the month and in the year.

Figures for 1993 to 1998 in columns 4, 6 and 8 represent growth of the category in the period December to December.

Table 2.3.: Average Commercial Banks' Interest Rates

Average interest rates (r and $r(D)$) are weighted arithmetic averages of the minimum and maximum interest rates.

Spread is the difference between the weighted minimum and maximum interest rate: $r_{min}=r - \text{spread}$, $r_{max}=r+\text{spread}$.

Nominal interest rates (n) are total annual interest rates.

The figures for the latest month are always provisional; updated figures in the following Monthly Bulletin are not marked with sign *.

With September 1995 was abolished the revaluation with the tolar indexation clause for obligations in domestic currency till 30 days, with July 2002 also revaluation for all loans and deposits in domestic currency with maturity less than 1 year.

Note 1: With the 1st July 2002 the "Law on changes and completions of the law on penalty rate and tolar indexation clause" came into force. It prohibits the use of tolar indexation clause for assets and obligations in domestic currency with the maturity less than 1 year. At the same time have most banks also stopped using the foreign exchange clause for short-term loans and deposits, which has reduced the number of reporting banks and led to series breaks.

Table 2.4.: Average Commercial Banks' Interest Rates on New Loans

Average interest rates on new loans are calculated on a basis of the data of the eight biggest banks, selected by balance-sheet-total criterion. New loans represent new contracts in the reference month. Data for consumer loans to households is collected on the representative sample of new loans (limited number of reports, min/max value). Any automatically changed conditions of lending contracts do not represent new business.

Interest rate on new business is a nominal interest rate increased by a sum of base interest rate or interest rate bounded to the euro exchange clause and subsidy per annum. Average interest rate on new business does not include any administrative or other costs.

All the interest rates are nominal weighted arithmetic averages, where value of certain type of loan represents the weight, except for foreign currency loans where the growth of foreign exchange rate is not taken into consideration.

The interest rates are presented separately, according to their type:

- NOM = a nominal interest rate, without indexation,
- TOM = an interest rate is bound to the base interest rate (TOM),
- D = an interest rate is bound to the euro exchange clause.

The annual averages are computed as simple arithmetic averages of monthly data.

Table 2.5.: Average Commercial Banks' Interest Rates on Basis of Interest Income and Interest Expenses

Interest rates are computed as the ratio of the amount of interest to the average balance of assets. Interest is represented by the interest income and interest expenses. The average amount of investments/assets is a sum of daily values divided by the number of days.

Because of the change in the frame of accounts for banks and savings banks since May 2002 the revalorization and interest incomes are no more represented separately, so the calculation of the real effective interest rates is no longer possible.

Table: Breakdown of bank` assets and liabilities by type of Indexation Clauses

		Loans			Deposits			Total		
		TOM	D	NOM	TOM	D	NOM	TOM	D	NOM
2001	<i>Jan.-Mar.</i>	92.5	6.8	0.7	62.7	2.6	34.8	77.5	4.7	17.9

Ljubljana Stock Exchange (Tables 2.7. to 2.9.)

Table 2.7.: The Ljubljana Stock Exchange: Turnover by Market Segment and by Type of Securities

Shares – Privatization Investment Funds shares are not included.
PIF - Privatization Investment Funds shares.

Turnover is measured by a single counting.

Table 2.8.: The Ljubljana Stock Exchange: Market Capitalization and Turnover Ratio

Market capitalization by market segment and by type of securities is calculated as the sum of market capitalization of individual securities. Market capitalization of an individual security is calculated as the product of the number of listed securities and the market price at the end of period.

Turnover ratio is calculated as turnover in a period divided by market capitalization at the end of period.

Short-term securities are not included in calculations of market capitalization and turnover ratio.

Table 2.9.: The Ljubljana Stock Exchange: Slovenian Stock Exchange Index and Bond Index

SBI - Slovenian Stock Exchange Index (index value: January 1994=1000)

BIO - Bond Index.

SBI, BIO - value of SBI and BIO at the end of period.

dT - change of index value by points.

d% - change of index value in percentage.

Min, Max - minimum and maximum value of index in a period.

Exchange rates (Tables 2.10.1. to 2.11.4.)

Tables 2.10.: Selected Bank of Slovenia Exchange Rates- Average Rates

The tables show Bank of Slovenia middle rates. Annual rates are computed as arithmetical averages of monthly rates. Monthly averages are computed as arithmetical averages of daily rates (Sundays and holidays are not included).

As from 1st January 1999, with introduction of European Monetary Union, the European Currency Unit (XEU) was replaced by the Euro (EUR) at the exchange rate 1 : 1. Fixed exchange rates between the Euro and the national currencies of the EMU Member States (valid from 1st January 2001):

1EUR =	40.33990	BEF
=	1.95583	DEM
=	340.75000	GRD
=	166.38600	ESP
=	6.55957	FRF
=	0.78756	IEP
=	1936.27000	ITL
=	40.33990	LUF
=	2.20371	NLG
=	13.76030	ATS
=	200.48200	PTE
=	5.94573	FIM

Due to the introduction of Euro in January 2002 the exchange rates of members of EMU currencies (ATS, FRF, DEM, ITL) are replaced by the exchange rates of some EU accession countries (CZK, HUF, PLN, SKK).

Introduction of a new currency, the Kuna (=1,000 previous Croatian Dinars) on 30th May 1994.

The Polish zloty was denominated on 1st January 1995 at the exchange rate 1 new zloty for 10.000 old zlotys.

Tables 2.11.: Turnover and Foreign Exchange Market

Annual rates are computed as arithmetical averages of monthly rates. Monthly rates are averages computed from daily rates on working days, weighed with turnover. Foreign currency exchange offices also report transactions on Saturdays, not shown in the table, but included in the monthly and annual totals.

Totals also include transactions between banks and enterprises and between banks solely. In addition to that the transactions between enterprises are included until 30th September 1999 and the transactions of banks with non-residents and households from 1st October 1999.

On the spot exchange market the timing of settlement is at latest 2 working days from the agreement. The forward exchange market is designed for transaction where the timing of settlement is at least 2 working days after the agreement.

The data by the contract agreement are defined by the agreement time of the transaction. The data by the contract settlement are time defined by the settlement time of the transaction.

Data for the turnover on the forward exchange market are available from October 1999. Also the data for turnover by the settlement are available only from October 1999.

3. BALANCE OF PAYMENTS AND EXTERNAL POSITION

Balance of Payments (Tables 3.1. to 3.4.)

General notes

In most respects the Slovenian Balance of Payments (BOP) conforms to the methodology of the IMF's *Balance of Payments Manual, fifth edition (1993)*.

Characteristics of the Data

Minus sign (-) indicates imports or surplus of imports over exports in the current account, increase in assets or decrease in liabilities in the capital and financial accounts, and growth of reserve assets. Data for transactions are converted from original currencies to EUR using the daily Bank of Slovenia exchange rates, or average exchange rates of the period if the exact date of transaction is not known.

Revision policy

Revision of balance of payments, international investment position and gross external debt data occur as follow:

- revision for **monthly data** are made with the release of:
 - the corresponding quarterly data;
 - the corresponding revised quarterly data;
 - the international investment position data for the corresponding year; and
 - the revised international investment position data for the corresponding year;
- revision for **quarterly data** are made with the release of:
 - the data for the following quarter;
 - the international investment position data for the corresponding year; and
 - the revised international investment position data for the corresponding year;
- revision for **annual** international investment position and external data are made with the release of the data for following years.

Data sources

BOP is compiled on the basis of monthly available data on transactions (ITRS), stock positions and estimates.

- **Reports on transactions**
 - accounts of domestic banks held with correspondent banks abroad (including the central bank),
 - nonresident accounts held with domestic banks,
 - non-bank resident accounts abroad,
 - other accounts between residents and nonresidents,
 - payments between residents and nonresidents in Slovenian Tolars.

Classification of transactions is using the descriptions of transactions provided by the banks' clients;

- **Reports on short-term claims and liabilities to non-residents (form SKV)** is a source for short-term trade credits since 2002.
- **Customs declarations;** from 1.5.2004 data on goods item for EU countries are collected through reports (**Intrastat**), while data for other countries are collected through Customs declarations (**Extrastat**).
- **Reports to the Bank of Slovenia on registered credits granted to and disbursed abroad;** For the period from 1997 also data on nature of direct payments from foreign creditors, which settle liabilities of domestic debtors to other nonresidents, are available from these reports.
- **Yearly surveys on balance and transactions with affiliated enterprises (SN)** is a source for reinvested earnings of direct investments.
- **Accounting data of the Bank of Slovenia;**
- **Commercial banks balance sheet data;**
- **Estimates.**
- **Monthly survey of duty free shops.**

There are several estimation models used in the BOP for the valuation of data on imports, incoming travel, labor income, Italian pensions (till the end of 1998), foreign currency and deposits of resident households.

Current account

Goods

Data for the General merchandise are based on customs declarations. Data on imports c.i.f. and exports f.o.b. are compiled by the Statistical Office. **Adjustments for valuation** of data on imports and **coverage** of data on imports and exports are made by the Bank of Slovenia. The imports data are adjusted from c.i.f. basis to f.o.b. basis by the coefficient which is equal to the weighted average of coefficients between the c.i.f. and f.o.b. values of imported goods (for the available sample), separately calculated for each type of merchandise, transport means and country of the exporter. Since 2004 the coefficient amounts to 1.0306, prior 2004 it amounted to 1.0393. The **coverage adjustments** are made for goods imported

without customs declaration and for which data are available from ITRS or reports of duty free shops and consignment warehouses. Since 1.5.2004 the coverage adjustments include as an estimate also data on imports of motor vehicles from EU by natural persons, not covered in Intrastat System.

Services

Transport

The source for recording of transportation services is the ITRS.

Travel

The ITRS sources used in the compilation of the **incoming travel** item include: a.) health and education related services, b.) payments made by nonresidents to Slovenian tourist agencies, c.) net withdrawals in tolar from nonresident accounts, d.) money spent in casinos by nonresidents, e.) data on sales of goods to nonresidents in duty free shops and consignment warehouses, f.) payments with credit cards and g.) sales of Tolars to nonresidents abroad.

The data on sales of Tolars to nonresidents in Slovenia are estimated on the number of border crossings of foreign travellers and on the number of nights spent by foreign tourists.

Data source for the item expenditure on travel are ITRS and estimations.

Construction services

The source of data is ITRS. All construction works are recorded under construction services.

Insurance services

Premiums on life and non-life insurance are split into two components: (i) the service charge included in insurance services and (ii) the premium in a narrow sense recorded as current transfer. The calculation of service charge is based on a fixed percentage of the premium payments.

Government services

All transactions settled through accounts of Slovenian embassies abroad as well as transactions coded as government services settled through accounts of Slovenian banks with foreign correspondents are included in this item.

Income

The ITRS is used as a main source for recording of **compensation of employees**. As many wages are not paid through domestic banks, supplementary estimations of such receipts from the neighboring countries are made. Data on **reinvested earnings and income on equity** are available in an annual survey of Slovenian direct investors abroad and of foreign direct investment enterprises in Slovenia. The present recording of **other investment income** (interest income) is based on the actual payments with the exception of income on reserve assets and loans (including long-term trade credits), which is based on an accrual principle from 2002 onwards.

Current transfers

In this item workers' remittances, insurance and other transfers of other sectors are included. The insurance item is calculated as a difference between the insurance premiums received and the claims paid on the credit side and vice versa on the debit side. The main source for other transfers are the ITRS and the customs documents.

Capital and financial account

Capital account

Capital transfers

Migrants' transfers covers not only payments recorded by domestic banks but also the changes in residency of accounts held with these banks.

Financial account

Direct investment

Direct investment is recorded on the basis of reporting of payments through domestic banks and of data from customs declarations. Data on reinvested earnings is based on yearly surveys on balance and transactions with affiliated enterprises (SN) and are included monthly as one twelfth of the yearly figure.

Until 1997 purchase and sale of all shares and equity have been included in this item.

From the beginning of 1997, purchase and sale of shares that assure more than 50 percent of company's equity, a control package of shares, shares issued by domestic companies on the primary markets with the purpose to increase the nominal capital of the company are included in this item, due to capital control measures. With the new Foreign Exchange Act in 1999 direct investment 10% rule is applied.

From 2001 onwards inter-company debt transactions between affiliated enterprises (10 percent or more capital share) are recorded as direct investment - other capital transactions. Until 2001 this kind of transactions are recorded as loans. Since 2002 the item other capital within direct investments includes also data on short-term trade credits between affiliated enterprises.

Portfolio investment

Until 1997 only data on sales and purchases of debt securities through banks were included in this item. Since February 1997 equity securities, not having the characteristics described in the note on Direct investment are

included in this item too. With the new Foreign Exchange Act in 1999 portfolio investment transactions include all transactions below the 10% rule.

Loans

From 2001 onwards inter-company debt transactions between affiliated enterprises (10 percent or more capital share) are not recorded as loans, but are recorded as direct investment - other capital transactions. Loans (including long-term trade credits) and related income has been calculated according to the accrual principle from 2002 onwards and according to the cash principle prior 2002.

Other investment

Other investments except equity between affiliated enterprises are included here and not under Direct investment. Short-term trade credits are estimated and recorded on net basis as change of assets till 2001. Estimation is based on comparison of data on imports and exports from customs declarations with corresponding settlements. Since 2002 onwards short-term trade credits are included on the basis of reports on short-term claims and liabilities to non-residents. Short-term trade credits between affiliated enterprises are included in direct investments. Item currency and deposits of households is estimated by using data on net purchases of foreign currency in foreign exchange offices, net deposits to households' foreign exchange accounts at domestic banks, estimated expenditure of resident households abroad (see Travel).

International monetary reserves

Reserve assets and related income has been calculated according to the accrual principle from 2002 onwards and according to the cash principle prior 2002.

Tables 3.1.: Balance of Payments 1988 - 1992

Excluding transactions with former Yugoslav Republics; processing is included in services, excluded in merchandise.

Note 1: For 1988 and 1989, Official sector data is included in Other sectors.

Note 2: For 1988 through 1990, Statistical errors include sales of claims from bilateral agreements to the former National Bank of Yugoslavia and its purchases of foreign currency through Slovenian foreign currency exchange offices.

Note 3: Reserve assets of the Bank of Slovenia.

Tables 3.2. and 3.3.: Balance of Payments

The data for the current year are revised monthly. Data become final according to the revision practice (see revision practice).

In June 2001 Slovenia acquired 16.39% share in holdings of former Yugoslavia with BIS (Bank for International Settlements), consisting of gold 16.9 mio SIT (EUR 77.8 million), foreign currencies 1.1 mio SIT (EUR 5.3 million) and shares 3.0 mio SIT (EUR 13.8 million). This transaction is not considered to be a balance of payments' flow, but a part of 'other changes' item, which reconciles the international investment position in consecutive periods.

Note 1: CD: customs declarations - foreign trade definitions (Statistical Office of Republic of Slovenia).

Note 2: June 1996: includes issue of government bonds in exchange for a part of allocated foreign debt in the amount of 63.7 mio SIT (EUR 374.9 million). Banks' liabilities under foreign loans are decreased for the same amount and transferred to liabilities to Government.

Note 3: Issues of government bonds:

- August 1996 (EUR 253.7 million);
- June 1997 (EUR 205.1 million);
- May 1998 (EUR 500.0 million);
- March 1999 (EUR 400.0 million);
- March 2000 (EUR 400.0 million) and in February 2001 (EUR 100.0 million);
- April 2001 (EUR 450.0 million).

Note 4: For 1993-2001, short-term claims include net changes in commercial credits (received and granted). Since 2002 onwards short-term commercial credits are included on the basis of SKV reports on assets' and liabilities' side of balance of payments. Short-term commercial credits between affiliated enterprises are included in direct investments item while other commercial credits are included in other investments/trade credits.

Note 5: Includes mostly BS fiduciary accounts. In June 1996 the amount of 21.2 mio SIT (EUR 124.9 million) was transferred to regular BS reserve accounts.

Note 6: Use of IMF credit (assumed upon membership in January 1993).

Note 7: Reserve assets of the Bank of Slovenia.

Note 8: The data on reinvested earnings for the year 2005 are not yet available, therefore a three-year average (from 2002 to 2004) of last available actual data from annual surveys on capital investments is

included as an estimation. In the year 2006 this estimation will be replaced with the actual data on reinvested earnings for the year 2005.

Note 9: From 2001 there is a time series break on the items direct investment and loans. From 2001 inter-company debt transactions between affiliated enterprises (10 percent or more capital share) are included in the direct investment item, before that they were included in loans item. Since 2002 the item direct investments includes also short-term trade credits between affiliated enterprises.

Note 10: Transfers from EU budget are since 1.5.2004 recorded in current and capital transfers according to the nature of their use. Split between current and capital transfers is provided by the Ministry of Finance.

Table 3.5: Merchandise trade

Exports f.o.b. and imports c.i.f. Year 2005: provisional data (Source: Statistical Office of RS).

The effective exchange rate: Growth of index denotes growth of value of Tolar, and vice versa.

3.6 Short-term commercial credits

Tables include positions of claims and liabilities of short-term commercial credits by countries/groups of countries in the last eight months. Data source is direct reporting of enterprises (reports SKV).

International Investment Position of Slovenia (Table 3.7.)

General notes

The international investment position is the balance sheet of the stock of external financial assets and liabilities. The financial items that comprise the position consist of claims on nonresidents, liabilities to nonresidents, monetary gold, and SDRs.

Methodology of the international investment position (IIP) of Slovenia is based on the fifth edition of the *Balance of Payments Manual*, IMF, 1993. The Manual distinguishes four sectors - monetary authorities, general government, banks, and other sectors.

Revision policy

See revision policy notes for "Balance of Payments" (Tables 3.1. to 3.4.)

Data sources

Data sources for the international investment position of Slovenia are mainly the same as those for the balance of payments financial account. However, there are differences with some items as follows:

Direct investment

Data on direct investment are collected from:

- concessional surveys on equity investment (SN),
- reports on loans granted to or received from nonresidents,
- short term commercial credits with nonresidents (SKV),
- reports on accounts abroad.

Source for the balance of payments is *international transactions' reporting system* - ITRS and reports on loans granted to or received from nonresidents.

In accordance with the recommendations of IMF, this item comprises investment where direct investor owns 10 percent or more of ordinary shares or voting power. Equity shares are valued at book value according to the accounting standards. Reinvested earnings are included.

Claims on and liabilities to affiliated enterprises are included in direct investment-other capital item. Intercompany claims or liabilities between affiliated banks and affiliated financial intermediaries recorded under direct investment capital are limited to those associated with permanent debt (loan capital representing a permanent interest). Until 2000 all long term intercompany claims are liabilities between affiliated banks and affiliated financial intermediaries were included in this item (not only permanent debt).

Data on claims and liabilities of Slovene enterprises in indirectly affiliated enterprises from 1996 onwards are included in the item 'Direct investment abroad' (in case when enterprise abroad having Slovene direct investment holds 10% or more of equity in other foreign enterprise). In the item 'Direct investment in Slovenia' data on investment of foreign enterprises in indirectly affiliated enterprises in Slovenia are included (in case that Slovene enterprise with foreign direct investment holds 10% or more of equity in other Slovene enterprise).

Portfolio investment

Data on equity securities and other equity shares are also available from enterprises' surveys (form SN), but only data from surveys where direct investor owns less than 10 percent of ordinary shares or voting power, are

included. (In the balance of payments, transactions with equity securities and other shares are collected from ITRS (see note to Tables 3.1. to 3.4. /Capital and financial account/Portofolio investment).

Data on residents' holdings of debt securities are available from direct reports from banks, and brokerage houses. For the balance of payments these data are collected from ITRS.

Liabilities of debt securities of government, banking and other sectors are available from credit registration from and Central Securities Clearing Corporation.

Trade credits and loans

Source for short-term trade credits are reports of enterprises on stock of external claims and liabilities (form SKV).

Sources for long-term trade credits and loans are credit registration forms and are the same for the international investment position and the balance of payments. Until 2000 the balance of payments did not distinguish loans between affiliated companies from loans between unaffiliated companies and included all loans in other investment items.

Currency & deposits, other assets, other liabilities and reserve assets

Sources of data for these items are banks' reports and Bank of Slovenia accounting data and are consistent with those for the balance of payments.

In the IIP arrears on loans and long term commercial credits are included in other claim/liabilities as short term item. Balance of payments does not included arrears.

The item "Assets / Currency and deposits of other sectors" in international investment position also includes data from the Bank for International Settlements (BIS) on deposits of Slovenian households in the banks in member states of BIS.

Till 2002 the item "Other liabilities of other sectors" in the IIP consists of the data on contractual joint ventures, which are not available for the balance of payments.

Table 3.7.: International Investment Position of Slovenia

IIP data do not include:

- data on real estate owned by Slovenian households abroad (mainly real estate in Croatia),
- claims on other countries on the territory of former SFR Yugoslavia, subject of negotiations on succession, expropriated assets in these territories and other assets transferred to the Slovenian government during the process of privatization.

Additional data on Direct Investment are available in a special publication of the Bank of Slovenia: 'Neposredne naložbe - Direct Investment' and on Bank of Slovenia Web site: <http://www.bsi.si/html/eng/publications/index.html>.

Gross External Debt (Tables 3.8 to 3.11)

General notes

Methodology is based on External Debt Statistics: Guide for Compilers and Users, IMF, 2003.

The guide is available under the following web address:

<http://www.imf.org/external/pubs/ft/eds/Eng/Guide/index.htm>.

Revision policy

See revision policy notes for "Balance of Payments" (Tables 3.1. to 3.4.)

Data sources

Gross external debt consists of debt liabilities from the international investment position (IIP). Data sources for Tables 3.8 to 3.10 are the same as those for the international investment position excluding the data on direct investment.

Table 3.8 Net External Debt

The table presents gross external debt, gross external assets in debt instruments, and net debt position. The data are the same as presented in the international investment position (IIP). The net external debt position is equal to gross external debt deducted by gross external assets in debt instruments.

Table 3.9 Gross External Debt

Gross external debt, at any given time, is the outstanding amount of those current, and not contingent, liabilities that require payment(s) of principal and/or interest by the debtor at some point(s) in the future and are owed to non-residents by residents of an economy. The types of financial instruments included in the presentation of the gross external debt position are as follows: debt securities (money market instruments, bonds and notes), trade credits (short- and long-term), loans (short- and long-term), cash, deposits and other debt liabilities. Maturity for debt liabilities is based on the formal criterion of original maturity. Long-term debt is defined as debt with an original maturity of over one year or with no maturity stated. Short-term debt, which includes cash, is debt repayable at notice or with an original maturity of one year or less.

Since september 2003 bonds and notes are valued at market value. Other debt instruments are valued at nominal value. Since 2002 accrued interest is included by loans and long-term trade credits.

Before July 2003, gross external debt was presented in Table 3.9 External Debt and in Table 3.12.2 International Investment Position of Slovenia - Liabilities:

Stocks as at 31 December 2002		bil. of EUR	
NET POSITION	1,4	NET POSITION	1,4

*Liabilities to direct investors and affiliated enterprises are not broken down by debt instruments (concept of new standard). An amount of 1.0 bil. of EUR included: 0.4 bil. of EUR short-term trade credits and 0.6 bil. of EUR loans (short- and long-term)
** Data from Central Securities Clearing Corporation

Table 3.10 Debt – Service Payment Schedule

Service payments projected are estimates of payments due on existing debt outstanding and do not include interest rate changes.

Table 3.11 Debt indicators

Note 1: Short-term debt includes the value of short-term external debt outstanding (original maturity) and the value of long-term external debt outstanding (original maturity) due to be paid in one year or less.

International Liquidity (Table 3.12.)

Table 3.12.: International Liquidity

Foreign exchange reserves of the Bank of Slovenia and banks include foreign cash in convertible currencies, deposits abroad and first class securities of foreign issuers. Balances on fiduciary accounts are included in 'Other foreign assets'.

Foreign exchange reserves of banks are only part of item 'Foreign Assets' in Table 1.4. Foreign assets also include other foreign currencies, deposits abroad, foreign securities and other foreign assets, which do not have the nature of high liquid international funds.

4. GENERAL ECONOMIC INDICATORS

Table 4.1.: Derivation and Expenditure on Gross domestic product

Data for 1999 are partially estimated.

Table 4.2.: Quarterly real gross domestic product

1999 - 1994: constant prices 1992; reference year 2000;
1995 - 2000: constant prices 1995; reference year 2000;
2000 and following: constant prices 2000;

Table 4.3.: Industry

Data for production with breakdown by industries for years 1992 to 1993 and employment for years 1992 to 1995 are estimations based on methodologies used in those years.

Table 4.5.: Employment and unemployment

The majority of data for the period before 1997 are estimations based on methodologies used in those years.

Table 4.6.: Average wages

Real wages are deflated with consumer price index.

Table 4.7.: Registered households' income

Real aggregates are deflated with consumer prices index.

5. PUBLIC FINANCE**Table 5.1.: General Government Revenues and Expenditures**

Note 1: The data of the current and previous year are revised monthly until the data on previous year became final.

Tables 5.2.: General Government Lending, Repayments and Financing

General Government Operations (Consolidated state budget, local governments, pension fund and health insurance fund).

Note 1: The data of the current and previous year are revised monthly until the data on previous year became final.

Tables 5.3.: Debt of Republic of Slovenia

Republic of Slovenia is defined as a legal person. The data from tables 5.1, 5.2. and 5.3. originate in the Bulletin on Government Finance, published by the Ministry of Finance.

6. PAYMENT SYSTEMS AND PAYMENT INSTRUMENTS**6.2. Payment cards**

Note 1: Credit cards: A card indicating that the holder has been granted a line of credit. The credit granted may be settled in full by the specific data each month (delayed debit card ie. charge card), or may be settled in part, with the balance taken as extended credit (credit card).

Note 2: Debit cards: A card which enables the holder to have purchases directly charged to funds on the cardholder's bank account.

Note 3: Cards, issued abroad: payment cards issued abroad and used for payments in Slovenia, mostly by non-residents.

Note 4: Volume and value of transactions abroad: use of cards issued in Slovenia for payments abroad.

Number of payment cards in circulation: number of valid payment cards held by residents and non-residents, issued in Slovenia. Data refer to the end of each quarter/year.

Number and value of payments refer to the use of payment cards in each quarter/year.

Domestic cards: payment cards issued by banks and enterprises residents in Slovenia without licence agreements with foreign issuers.

Licence cards: payment cards issued by banks and enterprises residents in Slovenia under licence agreements with foreign issuers.

Bank card: payment cards issued by banks.

Retailer cards: payment card issued by non-banking institutions, mostly for use at specific retail outlets.

Personal cards: payment cards issued to natural persons (family cards included).

Business cards: payment cards issued to legal entities.

6.3. Other payment instruments and innovative payment schemes

Note 1: Data refer to the end of each quarter

Note 2: Data refer to payment transactions and money withdrawals at POS terminals in Slovenia.

6.4. Electronic banking

Note 1: Only debt transactions are included.

6.5. Credit and debit transfers

A paper-based payment order is a standardised payment instrument related to a credit transfer, in which the payer submits an order on a paper-based form. It means any instruction by an account holder to his payment service provider requesting the transfer of funds from his account to another account (also between accounts of the same account holder). A contemporary form can assure automated processing with ICR technology (Intelligent Character Recognition) or classic manual processing. A special form of paper-based payment order is the so-called special payment order, which is issued by a creditor to be paid by the debtor. The special payment order is presented by the debtor at the bank, which then credits his transaction account and transfers the amount to the account of the creditor. The special payment order was developed by the BoS in 1997.

A non-paper based payment order is an electronic payment order related to a credit transfer, which the customer of the bank submits to his bank on electronic storage media.

A standing order is an instruction from a customer to his bank to make a regular payment of a fixed amount to a named creditor. The payer authorises his bank (the bank at which he maintains a transaction account) to pay a specified amount regularly to another account. The payment must be repeated at least five times. The execution of payments occurs under exact conditions on a particular day of the month.

Direct credit is special form of payment instrument related to a credit transfer, initiated by the payer, which enables a cashless fund transfer from payer to payee. Direct credit is used for the execution of small value payments, e.g., salaries, pensions, dividends and similar payments to a large number of creditors.

Direct debit is a preauthorised debit on the payer's bank account initiated by the payee. It is a payment instrument consisting of automatic debiting of the debtor's account for goods and services delivered by the creditor. Direct debit is initiated by the payee. The debtor (payer) authorises his bank to transfer funds from his bank account to the creditor's account and the creditor to submit a payment order to the creditor's bank to be paid. A typical example is an electricity bill payment.

A special money order is a standardised paper-based debit instrument used to remit money to the named payee. A special money order is issued by a bank, allowing the individual named on the order form to receive a specified amount of cash on demand.

6.6. Network of commercial banks

Note 1: In the number of head offices two banks with the license for operation pursuant to the Constitutional Law only are included (Kreditna banka Maribor d.d. and Ljubljanska banka d.d. Ljubljana).

Note 2: Statistical Regions, Source: Statistical Office of the Republic of Slovenia, March 31, 2000. Data up to year 2000 are presented according to Standard Classification of Territorial Units - Statistical Regions of the Republic of Slovenia, January 1, 1999.

Note 3: Data referring to the Postal bank of Slovenia do not include units of the Post of Slovenia that operate for the Postal bank of Slovenia on the contractual basis.

Exchange rates ³				http://www.bsi.si/html/eng/publications/index.html
Addendum:				
Population				"Prva statistična objava - First release" (Statistical Office of the Republic of Slovenia)

* The period to which data to be released relate is shown in parentheses. NLT stands for *no-later-than*.

Financial and external sector data (except Merchandise trade) are first disseminated on the Bank of Slovenia Internet website, and later in the Bank of Slovenia Monthly Bulletin. At the end of business week, the precise dates of release during the following week are published on the Bank of Slovenia Internet website (http://www.bsi.si/html/eng/financial_data/hit/adv_re_cal.html).

¹ The data on interest rates are published by the Bank of Slovenia and Ministry of Finance separately.

² Data on representative interest rate of the BoS and interbank money market rates are disseminated whenever the change occurs.

³ Data are disseminated daily on Bank of Slovenia's page Currency Exchange rates - for display (http://www.bsi.si/html/eng/financial_data/daily/tecajna_lista.asp) and on Archive of financial data (http://www.bsi.si/html/eng/financial_data/arhiv/index.html).
