Important information

Monthly Bulletin of Bank of Slovenia has been, from the number 2-3 for February-March 2007, volume 16, partly changed in its content and form.

The preannouncement of the change has been published on the web page of the Bank of Slovenia in January 2007.

The main changes are as follows:

- The beginning of publishing the statistical data of value, which refer to the period after the entry to the euro area, in the official domestic currency - euro. The data of value for the previous period will continue to be published in tolar, as the official Slovenian currency in that period. The data in euros are in the tables separated from the data in tolar by line.
- The change in the concept of the international monetary reserves because of the entry to the Economic and monetary union. Among the Slovenian international monetary reserves after the entry to the euro area, compared to the period before, there are no longer assets in euro as well as the claims on the euro area residents. More explanation is available in: "The statistical treatment of the international monetary reserves at the entry of Slovenia to the euro area" (slovenian), in the chapter Methodological information on the internet page: <http://www.bsi.si/en/financial-data.asp?Mapald=64>.
- The change in the presentation of the currency in the circulation to the standards of the euro area.
- The accommodation of the balance sheet of Bank of Slovenia to its activities in the framework of the Eurosystem.
- The beginning of the publishing of the interest rates of the euro area money market as well as the publishing of the whole set of the interest rates of the Monetary financial institutions according to the ECB's methodology.
- The beginning of the publishing of the financial accounts statistics in the new chapter.
- Colour separation of the individual statistical chapters, to alleviate search and because of the link of the chapters to the specialised publications.

More information can be found in Methodological Notes in the Bank of Slovenia monthly Bulletin.

The entry to the euro area (on 1.1.2007) caused a break in the time series of the statistical tables in the Monthly bulletin in cases where the "currency" is an attribute. An expected reclassification takes place, for example of the stock of outstanding loans in euros from the time series of "foreign currency" before the introduction to the time series of "domestic currency" after the introduction of euro. To enable easier reconstruction of this change, the shares of the Euro amounts in stocks of the foreign currency in the tables 1.3, 1.4, 1.5 and 1.6 on 31.12.2004, 31.12.2005 and 31.12.2006 are published in the chapter Methodological notes.

Developing countries contributed most to global economic growth also in the first quarter of this year. Quarterly economic growth rose to 0.8% in the euro area as a result of a faster growth in Germany and France, while the rate in the US slowed to 0.5% as a result of lower growth in domestic consumption. In May the European Commission raised its economic growth forecasts for the euro area and the US for 2011 and 2012; at the same time unemployment remains high. The uncertain situation in the euro area periphery countries, Greece in particular, brought a fall in the euro against other global currencies in May. Prices of oil and other primary commodities fell sharply in May, partly as a result of rapid growth in the previous months. The major central banks persist with a stimulative monetary policy, while the central banks in certain major developing countries raised their key interest rates again in May.

Economic growth in Slovenia in the first quarter was down on the previous quarter at 0.3%, significantly below the euro area average, while in year-on-year terms it stagnated at 2%. Year-on-year growth in value-added was again highest in the manufacturing sector at 10%, but value-added in the construction sector was down a fifth as construction investment again fell sharply. Growth in the majority of service sectors remained positive, despite low growth in final consumption; the main exception was financial and insurance activities, where value-added declined by 3.5%. Economic growth thus remains dependent on foreign demand and the performance of export-oriented sectors on foreign markets. Given that consumer purchasing power is down on the pre-crisis period, and that consolidation of the public finances is vital, the recovery in domestic final consumption will remain slow with small contribution to GDP growth. Maintaining the price and cost competitiveness of the export sector thus remains of key importance to continuing economic growth.

The number of registered unemployed fell again in May, while the workforce in employment in the private sector increased in March for the third consecutive month. Unemployment stood at 108,600 in May, still up 10.4% on the same month last year. The registered unemployment rate stood at 12.2% in March, while the surveyed unemployment rate in the first quarter stood at 8.5%. While employment is rising in almost all branches of the private sector, it is still falling sharply in construction, where pessimism about future employment prevails. The average gross wage per employee in March was up 1.7% in year-on-year terms at EUR 1,524. Year-on-year growth in gross wages was relatively low as a result of a base effect from March 2010, when a rise in the minimum wage and bonus payments caused a rise in gross wages.

Year-on-year inflation as measured by the HICP was up 0.4 percentage points in May at 2.4%. The contribution made by food prices rose, while the contribution made by energy prices declined. The decline in the negative contribution to inflation made by prices of non-energy industrial goods caused a significant rise in the core inflation indicators.

The current account recorded a small surplus of EUR 23 million in March, primarily as a result of high net inflows from the EU budget. The cumulative current account deficit over the last 12 months nevertheless increased further. It stood at 1.3% of GDP in March, compared with 0.9% of GDP in the same month last year. The main factor in the widening deficit was merchandise trade, whose cumulative deficit over the last 12 months increased to 3.1% of GDP. A deterioration in the terms of trade accounted for approximately half of this.

Growth in general government revenues in the first quarter outpaced growth in expenditure. At the same time the government remains committed to fiscal consolidation focused on reducing and rationalising expenditure. With the rejection of the pension reform in a referendum, and given the additional commitments that the government has assumed, particularly those in respect of Slovenian Railways, achieving the guidelines and targets set out in this year's update to the Stability Programme and eliminating the excessive government deficit by 2013 as recommended by the European Council are of key importance. The European Commission's projections for the general government deficit, which do not take into consideration all the measures from the Stability Programme, are slightly higher than those projected for this year and next year in the aforementioned programme.

After a large increase in March, in connection with a bond issue and an increase in government deposits, the banking system's total assets declined by EUR 1.8 billion in April. The main factors in the decline in total assets were declines in government deposits and in liabilities to banks. The main factors on the investment side were declines in claims against the central bank and investments in securities. Lending to non-banking sectors stagnated, while loans to households recorded a moderate increase. The banking system recorded a pre-tax profit of EUR 54.3 million during the first four months of the year, despite rising impairment and provisioning costs.

The market capitalisation of bonds on the Ljubljana Stock Exchange fell by 2.3% in April, while the market capitalisation of shares fell by 5.1%. The proportion of the market capitalisation of shares accounted for by non-residents stood at 11.4%. The SBITOP fell by 5.3% in April, to end the month at 788. The domestic mutual funds' assets under management increased by 1.9% in April to EUR 2,075.6 million, as a result of net inward payments of EUR 7.0 million and the conversion of KD ID into a mutual fund, while the average unit price fell by 1.1%.

1 | International Environment

Economic growth in the first quarter slowed in the US and increased in the euro area, while economic activity in the Far East was affected by the natural disaster in Japan. Real GDP in the euro area in the first quarter of this year was up 0.8% on the final quarter of 2010. The main contributions came from Germany, which recorded growth of 1.5%, and France, with 1% growth, where gross fixed capital formation increased significantly. In the US quarterly GDP growth slowed to 0.5%. The slowdown was the result of slower growth in private consumption as a result of uncertainty on the labour market and rising inflation. There was also a decline in government consumption. In Japan GDP in the first quarter of this year was down 0.9% on the final quarter of 2010, primarily as a result of the natural disaster in March. This resulted in disruptions to supply in international industrial chains, which was reflected in a decline of over 20% in Japanese exports in April. In China too growth in industrial production slowed in April, primarily as a result of a decline in car production and restrictions in the supply of electricity.

Growth in industrial production is slowing in the euro area and the US, while activity in the construction sector remains low. March's industrial production in the euro area was up 5.6% in year-on-year terms, but was

unchanged compared with February. In March, new industrial orders also declined in the euro area. The slowdown in growth in industrial production is also being reflected in the US, where industrial production in April was unchanged from March, and was up 5% in year-on-year terms. Activity in the construction sector remains low. The volume of construction work in the euro area in March was down in monthly terms for the second consecutive month, by 0.3%, and was down just over 5% in year-on-year terms. The situation in the construction sector also remains unfavourable in the US. The number of building permits issued for residential buildings in April was down just under 13% in year-on-year terms, and was down 4% on March. The average number of building permits issued for new residential buildings in the US during the first four months of the year was down 14.7% in year-on-year terms.

The unemployment rate in the euro area and the US remains high, despite a small improvement in the early months of the year. In the euro area in particular this is curbing growth in private demand and retail turnover. Unemployment in the euro area stood at around 10% in the second half of last year, and remained at 9.9% during the first four months of this year. Having stood at 9.4% in December, unemployment in the US fell during the first three months of the year, but rose to 9% in April. Consumer confidence in the US improved significantly in May, primarily as a result of a fall in oil prices and reduced concerns about the economic recovery. In

April, volume turnover in the retail sector (and in food services) in the US stagnated in monthly terms, but was up 4.3% in year-on-year terms. Consumer confidence is rising in the euro area, although volume turnover in the retail sector remains low. In March it was down 1.1% on February, and down 1.4% in year-on-year terms. The largest fall in turnover in March compared with February was recorded by the retail of non-food products and fuel for vehicles.

In its spring forecasts the European Commission raised its growth forecasts for 2011 for the euro area and the US. The economic growth forecasts for the euro area are 1.6% for this year, up 0.1 percentage points on the autumn forecast, and 1.8% for 2012, unchanged. The European Commission also raised its growth forecasts for the US, to 2.6% for this year and 2.7% for 2012. The OECD also slightly raised its forecasts for the US and the euro area in May. The forecasts are 2% in both 2011 and 2012 for the euro area, and 2.6% in 2011 and 3.1% in 2012 for the US. Consensus's May economic growth forecasts for eastern Europe were 4.2% for this year and 4.3% for 2012.

Year-on-year inflation rose to 3.2% in the US in April, and was initially estimated at 2.7% in the euro area in May, down 0.1 percentage points on April. The main factor in the inflationary pressures in April was the movement in prices of oil and other energy products. The larg-

est contributions to April's monthly inflation of 0.6% in the euro area came from transport prices, housing prices and alcohol and tobacco prices. The largest rise in the US in April was recorded by energy prices. Core inflation is gradually rising, reaching 1.8% in the euro area and 1.3% in the US. Year-on-year growth in prices of manufactured goods stood at 6.7% in the euro area in March, and 8.5% in the US in April.

US dollar prices of crude oil and other commodities fell sharply in May in monthly terms, while gold prices rose. The average price of a barrel of Brent crude in May was down 7.0% on April at USD 114.50, but was

Notes: *Seasonally adjusted data – Eurostat for the euro area and BEA for the US. **European Commission, European Economic Forecast – spring 2011

up over 50% in year-on-year terms. Commodity prices were down 5.0% on April, but remained up over 40% in year-on-year terms. The monthly fall in prices was the result of the closing of forward positions, the release of certain economic figures that were worse than expected, and the consequent concerns about a slowdown in global economic growth. Heightened risk aversion was also reflected in a rise in gold prices.

The euro fell against major global currencies in May. The renewed increased uncertainty on the financial markets in the euro area had an impact on the euro. The euro fell by 0.6% against the US dollar in May, averaging USD 1.4349 during the month. The euro also fell against the Japanese yen, the pound sterling and the Swiss franc

in May. The Federal Reserve left its key interest rate unchanged in May. The ECB also left its key interest rate unchanged in May, at 1.25%. While monetary policy at the ECB and the Federal Reserve remains stimulative, the central banks in countries with high economic growth are continuing their gradual raising of key interest rates. The central bank of India raised its key interest rate in May for the third time this year, by 50 basis points to 7.25%. The central banks of Norway, Israel and Poland also raised their key interest rates in May. In May China's central bank raised its reserve requirement rate for banks and other financial institutions for the fifth time, with the aim of addressing rising inflation.

2 | Economic Activity and Labour Market

Real sector

According to seasonally adjusted SORS figures, economic growth in the first quarter was down on the previous quarter, and stood at 2% in year-on-year terms. Having outpaced the euro area at the end of last year, quarterly growth in the first quarter was 0.5 percentage points less than in the euro area overall at 0.3%. Year-on-year GDP growth stood at 2.0%, approximately at the level of the previous quarter, compared with 2.5% in the euro area overall, mostly as a result of exceptional growth in Germany. Economic growth remains dependent on foreign demand and the performance of export-oriented sectors on foreign markets. Maintaining the price and cost competitiveness of the export sector thus remains of key importance to continuing economic growth

According to the GDP expenditure breakdown, year-on-year growth in domestic consumption remained at the level of the end of last year, but only because of an increase in the contribution of inventories. It reached 2.2%, year-on-year growth in final consumption declining from 2.1% in the final quarter of last year to 1.4%, despite a low basis. Growth in household consumption declined to 1.2%, and remained positive primar-

Source: SORS, constant prices.

ily as a result of the pass-through of a slightly higher level from the end of last year. Growth in government final consumption also slowed. Given that consumer purchasing power is down on the pre-crisis period, and that consolidation of the public finances is unavoidable, the recovery in domestic final consumption will remain slow, and its contribution to GDP growth will remain small. As a result of a further contraction in construction investment, the year-on-year decline in gross fixed capital formation increased to more than 6%, despite a low basis. Growth in foreign trade was up significantly on the final quarter of last year. Merchandise imports were up 11.1% in year-on-year terms, while merchandise exports were up 11.4%. Growth rates were comparable to those in the second quarter of last year, when growth in global trade increased sharply. The contribution of foreign trade to GDP growth was nevertheless negative, at -0.2 percentage points, primarily as a result of faster growth in imports of services. Given the low level of domestic final consumption, the increase in merchandise imports is likely con-

nected to the high import component of exports, high growth in investment in machinery and equipment and the renewal of inventories. These contributed 2.3 percentage points to GDP growth in the first quarter, the highest figure since the second quarter of last year.

The economy's responsiveness to growth in foreign demand remains the main source of the increase in value-added, while the crisis in construction again deepened sharply, reducing year-on-year GDP growth by more than 1 percentage point. The manufacturing sector recorded a year-on-year increase of 10% in value-added in the first quarter, although much of this was due to a low basis. Value-added increased notably in the sectors of wholesale and retail trade, transportation and storage, accommodation and food service activities, professional, scientific and technical activities, and other business activities. Construction remains the main factor reducing economic growth. With a year-on-year decline of 20% in value-added, construction reduced economic growth by over 1 percentage point. These figures indicate

that the crisis in construction deepened further in the first quarter. Partly in connection with construction, developments remained negative in the financial and insurance activities sector, where value-added was down 3.5% in year-on-year terms.

Quarterly growth in industrial production slowed again in the first quarter, but only as a result of the negative developments in January. After January's monthly decline of over 4%, industrial production rose over the next two months, the rate exceeding 2% in March. Quarterly growth reached 0.6%, down a half on the final quarter of last year. The lower growth was the result of a decline of 0.8% in the production of intermediate goods, the monthly figures indicating that increased demand for these products was offset by a decline in inventories. Having been low last year, growth in the production of consumer goods in Slovenia strengthened in the first quarter. This was primarily a reflection of increased demand for such products in the euro area, partly in connection with the stabilisation of the unemployment rate. The production of capital goods increased again, in line with the relatively high capacity utilisation. The latter is now approaching its long-term average in Slovenia and the EU at over 80%. According to a survey on investment in industry, domestic demand for capital goods is also expected to increase this year, companies

estimating that investment will rise by just under a fifth this year. Further evidence for this assessment comes from the high growth in investment in machinery and equipment in the first quarter of this year. Industrial production in the first quarter was up 9% in year-on-year terms, but growth is expected to decline gradually later in the year as a result of a base effect.

Quarterly growth in the real value of new orders in industry was relatively high in the first quarter. Demand from the domestic market was notable. Despite a monthly decline in March, the real value of new orders in

Notes: Differences from official numbers are due to rounding. Data are unadjusted for seasonal and working days effects.

* Volume of industrial production. ** Real value of construction put in place. *** Old methodology.

the first quarter of this year was up just over 6% on the previous quarter, the highest rate since the final quarter of 2009. The value of orders from the domestic market increased by just over a tenth, while demand was highest for intermediate and capital goods. This is in line with the continuing increase in industrial production and the relatively high capacity utilisation in Slovenian industry. Growth in the value of orders for consumer goods was lower than 1%, an indication of the low level of household consumption. This is confirmed by the low real growth in volume turnover in the retail sector.

Activity in the construction sector recorded a sharp monthly decline for the second consecutive month in March, reaching a new low. It was down just over 7%

on February, and was down 54% on the peak recorded in September 2008. The year-on-year decline also increased, to over 26%, the highest figure in the last year and a half. After a sudden increase in the value of construction put in place in the construction of buildings in December and January, there was a sharp reversal in February and March, notably in residential construction. In this segment of construction, activity in March was down 76% in year-on-year terms, and was down 85% on its peak in October 2008. As a result of the positive monthly developments in December and January, the quarterly decline in construction activity slowed to just under 2%. This is the smallest figure since the second quarter of 2009.

The number of building permits and the floorspace of the corresponding buildings declined again in the first quarter. The total number of building permits was down 4% on the final quarter of last year, while the corresponding floorspace of the buildings was down just under a fifth. At the aggregate level the year-on-year changes were also negative, and the decline was particularly pronounced for residential buildings. For non-residential buildings the number of building permits and the corresponding floorspace were up in year-on-year terms, primarily as a result of the low levels recorded in the first quarter of last year. Further indication of the depth of the crisis in the construction sector comes from the longer-term comparison of the number of building permits and corresponding floorspace of buildings. The number of building permits issued in the first quarter of this year was down just over a third on the quarterly average between 2000 and 2010, while the corresponding floorspace of buildings was down just under a third.

Prices of new-build housing rose sharply in the first quarter of this year, at the same time the number of transactions declined significantly. According to SORS figures, prices of new-build housing in the first quarter of this year were up 6.2% on the final quarter of last year, and up just over a tenth on the low recorded in the third quarter of 2009. They were down just 8.8% on the high recorded in the third quarter of 2008. The movement in prices of new-build housing is at odds with activity in residential construction and consumer purchasing

power. At the same time this growth is hindering the reduction of inventories of unsold new housing, which is reducing space for new investment in residential construction. The number of transactions in new-build housing fluctuates sharply on a quarterly basis, but the decline of 30% recorded in the first quarter of this year is one of the largest since the data became available. Growth in housing loans is also slowing sharply.

Volume turnover in the retail sector remained relatively low in April, while turnover in trade in motor vehicles continued to record high growth. Year-on-year growth in volume turnover in the retail sector stood at 1.5% in April, but only as a result of an increase in turnover of motor fuels caused by the rapid growth in transport services. Volume turnover in trade in foodstuffs and non-food products in April was down in year-on-year terms, an indication of the negative impact of the adverse situation on the labour market on growth in household final consumption. Turnover in the trade and repair of motor vehicles continued to record high growth, the rate reaching just under 14% in April.

The gradual increase in confidence in the economy continued in May. The economic sentiment indicator was up 1 percentage point in monthly terms, and up 4 percentage points on the beginning of the year. Confidence in the manufacturing and service sectors was down slightly on April, but the value of the indicators nevertheless remained positive. The main factor in the de-

cline in the overall manufacturing confidence indicator was reduced estimates of total orders. At the same time the exports expectations and total demand expectations indicators remained at a relatively high level. The small decline in the services confidence indicator was the result of reduced estimates of current demand, but companies remained relatively optimistic about future demand. After unusual volatility in the first four months of the year, the retail confidence indicator increased in May for the second consecutive month as a result of a rise in current and projected sales. Pessimism in the construction sector is gradually diminishing, but the confidence indicator remains the lowest among private sector activities. Construction companies mostly expect the trend of declining orders to end. Consumer confidence remained low in May. The small increase in the indicator was primarily the result of less pessimistic expectations regarding unemployment in the next 12 months.

Labour market

The number of registered unemployed fell in May for the third consecutive month to stand at 108,600. This was down 2,900 or 2.6% on April. Year-on-year growth in the number of unemployed was down over 5 percentage points on the beginning of the year, but remained high at 10.4%. Around 6,400 people newly registered as unemployed in May, approximately the same number as in April. In April 9,300 people deregistered as unemployed, just under 70% of whom moved into employment. Com-

panies notified 17,800 vacancies in April, the proportion of unfilled vacancies nevertheless remaining at a slightly higher level than before the crisis. The registered unemployment rate stood at 12.2% in March. The surveyed unemployment rate in the first quarter of this year was up 0.7 percentage points at 8.5%.

The workforce in employment in the private sector increased in March for the third consecutive month, but was still down 2.2% in year-on-year terms. The workforce in employment in the private sector thus remains down 10% on its peak before the crisis in the third quarter of 2008. In almost all activities within the private sector the workforce in employment was either up or more or less unchanged in monthly terms, with only con-

struction continuing to record a decline, which totalled 600 in March. The workforce in employment has already fallen by a quarter from the peak of the cycle in construction, and pessimism still prevails with regard to employment expectations in the sector. The largest increase of 450 in the workforce in employment in the private sector

in March was recorded by the sector of trade, maintenance and repair of motor vehicles. This was followed by professional, scientific and technical activities and by administrative and support services activities, where the increase in both sectors exceeded 300.

The workforce in employment also increased slightly in the public sector, by 500 during the month, primarily as a result of employment in education and health. The workforce in employment in public administration and compulsory social security again declined slightly, having been in decline since June 2010. The year-on-year decline in this sector reached 1.5%, the highest figure in the last 10 years.

The average gross wage per employee in February was up 1.7% in year-on-year terms at EUR 1,524. This low year-on-year growth – in the 12 months to February, the gross wage per employee recorded average year-on-year growth of 4.0% – is the result of a high basis from March 2010, when wages increased as a result of a rise in the minimum wage and bonus payments. Another fac-

Total wage bill and average monthly gross wage per employee

*The wage bill is calculated as the product of the average gross wage for employees of legal persons who received pay and the total number of employees of legal persons.

Source: SORS, Bank of Slovenia calculations.

tor in this was bonus payments in the pharmaceutical industry, which this year were paid in February, and not in March as is customary. The average gross wage in March was up 1.7% in the private sector, while in the public sector¹ it was up 0.8%. As a result of the fall in employment and lower wage growth, the nominal wage bill according to the calculation covering all corporate employees was also down in year-on-year terms for the first time in more than a year. It was down 0.8% in the total economy as a result of a decline of 1.5% in the private sector, but was actually up 1% in the public sector.

Selected competitiveness indicators

The harmonised index of the nominal effective exchange rate was up in monthly terms in April for the third consecutive month, and was also up in year-on-year terms for the first time this year. The harmonised index of the nominal effective exchange rate in April was up 0.3% on March. The euro rose by 3.3% against the US dollar, 5.2% against the Japanese yen, 1.9% against the pound sterling and 0.8% against the Swiss franc in April. The main factors in the euro's rise against major currencies were the favourable economic figures and corporate results in certain euro area countries. As a result of the monthly appreciation and a base effect, the year-on-year change in the nominal effective exchange rate went from a depreciation of 0.3% in March to an ap-

¹ The public sector and private sector are distinguished according to the standard classification of economic activities. The public sector includes public administration, education, health and culture. The weakness in this indicator is that it includes legal entities that do not fall within the public sector.

preciation of 0.5% in April.

The harmonised index of the real effective exchange rate as measured by consumer prices was up in monthly terms in April as a result of the appreciation in the nominal effective exchange rate, while the ratio of domestic prices to the basket of foreign prices remained unchanged. The monthly increase was thus the same as that in the index of the nominal effective exchange rate, the year-on-year depreciation declining from 1.0% in March to 0.6% in April. Slower year-on-year growth in domestic prices than in the basket of foreign

prices contributed 1 percentage point to the year-on-year depreciation.

The gap by which Slovenia's price competitiveness trails that of the main euro area trading partners again narrowed slightly in April. In the context of the small monthly appreciation, April's rise in Slovenia's harmonised index of price competitiveness was 0.4 percentage points less than the average rise in the main euro area trading partners. The gap by which Slovenia's price competitiveness trails these countries thus narrowed for the third consecutive month. Slovenia's price competitiveness is also improving in the year-on-year comparisons. The price competitiveness indicator recorded a year-on-year depreciation of 0.6% in April, compared with an average appreciation of 0.1% in the main euro area trading partners.

3 | Price Developments

Year-on-year inflation as measured by the HICP stood at 2.4% in May, up 0.4 percentage points on April, primarily as a result of changes in food prices and prices of non-energy industrial goods. Year-on-year growth in food prices was up 1.7 percentage points in

May at 6.7%, as a result of an increase of 3.9 percentage points in growth in prices of unprocessed food to 10.3%. This pronounced increase was a reflection of the seasonal rise in prices of fruit and, to a slightly lesser extent, vegetables. Growth in prices of processed food was also up, by 0.7 percentage points at 5.1%, as a result of rises in prices of coffee, tea and cocoa, sugar and confectionery products, and alcoholic beverages. The seasonal price rises brought by the changeover of collections saw a monthly rise of 2.3% in prices of clothing and footwear, more than in May of last year. This also brought a decline of 0.5 percentage points in the year-on-year fall in prices of non-energy industrial goods to 0.7%. The year-on-year decline in services prices slowed by 0.1 percentage points in May to 0.3%, largely as a result of a rise in prices of package holidays, hotel accommodation and car insurance. Despite a monthly increase of 0.2% in energy prices in May, year-on-year growth in energy prices declined by 1.4 percentage points to 8.6% as a result of base effects.

All the core inflation indicators were up in year-on-year terms, mainly as a result of a slowdown in the fall in prices of non-energy industrial goods. Year-on-year core inflation excluding energy food, alcohol and tobacco rose to -0.3% in May. Core inflation excluding energy and core inflation excluding energy and unprocessed food also rose, to 1.4% and 0.6% respectively. The ongoing adverse situation on the labour market is continuing to result in low growth in household final con-

sumption, thereby curbing core inflation. At the same time the volume turnover of retailers in most segments of the retail sector remains low. However, the trends in core inflation in the last month may already indicate the gradual pass-through of higher corporate input costs as a result of higher commodity prices into domestic consumer prices.

According to the latest detailed figures, the largest contributions to April's fall in year-on-year inflation came from prices of clothing, fuels and lubricants, tobacco and vegetables. The largest rises were recorded by prices of fruit, while the largest contribution to inflation again came from energy prices. The year-on-year fall in car prices slowed. The year-on-year fall in prices of clothing increased by 4.2 percentage points in April to 5.3%, their negative contribution to year-on-year inflation increasing by 0.2 percentage points to 0.3 percentage points. At the same time year-on-year growth in prices of footwear became positive again. The trend of a slowdown in the fall in car prices continued, their negative contribution to inflation standing at 0.4 percentage points. Prices of sports equipment rose sharply for the second consecutive month. Year-on-year growth in food prices declined by 0.2 percentage points in April to 5.0%, primarily as a result of a decline in year-on-year growth in prices of tobacco, oils and fats, and vegetables. The contribution to year-on-year inflation made by prices of tobacco declined by 0.1 percentage points to 0.3 per-

centage points as a result of a smaller rise in excise duties compared with last April. After five months of increasing year-on-year growth, prices of oils and fats fell in April, which further contributed to the decline in year-on-year growth in prices of processed food. This was down 0.4 percentage points at 4.4%. Despite the decline of 4.8 percentage points in year-on-year growth in prices of vegetables to 3.5%, growth in prices of unprocessed food increased by 0.3 percentage points to 6.4% as a result of a rise in prices of fruit. Year-on-year growth in energy prices declined by 1.4 percentage points to 10.0%. The government again cut excise duties on motor fuels and mitigated the pass-through of oil prices on global markets

into domestic final prices. The contribution to year-on-year inflation made by energy prices during the first four months of the year was down 0.3 percentage points at 1.4 percentage points.

Industrial producer prices on the domestic market rose in April. Year-on-year growth in industrial producer prices on the domestic market was up 0.2 percentage points in April at 5.0%. Prices rose for the seventh consecutive month, reaching their highest level since October 2008. Despite a decline of 0.7 percentage points in year-on-year growth in commodity prices, they are still recording the highest rate, at 8.0%. The largest change in year-on-year growth in April was recorded by energy prices, the rate increasing by 2.2 percentage points to 2.9%, largely as a result of rises in fuel prices. Year-on-year growth in prices in the manufacture of basic metals declined for the second consecutive month, but it remains the highest among all price groups at 19.8%. The largest rise in prices in monthly terms in April was recorded by the manufacture of computer, electronic and optical products, the manufacture of textiles and the manufacture of beverages.

4 | Balance of Payments

Current account

There was an improvement in the current account in March. A small surplus of EUR 23 million was recorded, taking the current account deficit in the first quarter to EUR 166 million, up EUR 59 million in year-on-year terms. With trade in merchandise and services balanced, and net outflows in factor income having declined by a tenth, the main factor in March's current account surplus was a net inflow in official transfers. The current account deficit over the last twelve months nevertheless increased, to stand at EUR 469 million or 1.3% of GDP in March, compared with 0.9% of GDP in the same month last year.

The slowdown in the trend monthly growth in merchandise trade continued in March, slightly more rapidly on the export side than on the import side. In March, the annualised trend rate of growth in merchandise imports stood at 9.6%, 5 percentage points higher than the rate for merchandise exports. As the trend rates slowed in March, year-on-year growth in merchandise trade also declined, increasingly as a result of last year's basis. Despite the slowdown, growth in merchandise trade in March notably exceeded the rates from the years before the outbreak of the economic crisis. Merchandise

Current account components

Source: Bank of Slovenia.

imports were up 18.1% in March at EUR 1,978 million, while merchandise exports were up 14.2% at EUR 1,882 million. The result of these developments in merchandise trade was a deficit of EUR 96 million.²

At the outbreak of the crisis the decline in merchandise imports was higher than that in exports, as a result of the sharp decline in domestic demand and the simultaneous fall in commodity prices. In the final quarter of 2008 and in the majority of 2009, Slovenian economy adjusted to the adverse business conditions by reducing merchandise imports. The largest year-on-year declines were recorded by imports of consumer goods and imports of capital goods, while imports of intermediate goods declined by slightly less. With the recovery in foreign demand and economic growth, year-on-year growth in merchandise trade strengthened sharply last year. By the end of the third quarter of 2010, average growth in merchandise exports was outpacing import growth.

With the gradual recovery of economic growth and the accompanying rapid growth in commodity prices, growth in merchandise imports has again overtaken export growth. Growth in imports of capital goods and consumer goods has strengthened as economic growth has strengthened. As a result of these developments, year-on-year growth in merchandise imports has outpaced export growth since the third quarter of last year, the merchandise trade deficit gradually widening. In the 12 months to March it widened to EUR 1,122 million or 3.1% of GDP, compared with 1.9% of GDP in the same month last year.

The terms of merchandise trade were negative in the early part of this year, which accounted for just over half of the merchandise trade deficit in the first quarter. With import prices falling faster than export prices, the terms of trade improved by 4.7% in 2009, but deteriorated in 2010 and the early part of this year. The indices of prices in merchandise trade based on data from the national accounts have risen continually since the second quarter of last year. Export prices rose by 3.0% on average in 2010, while the index of the prices of merchandise

imports increased by 6.4% as a result of rapid growth in commodity, food and energy prices. The terms of trade thus deteriorated by 3.2%. Growth in prices in merchandise trade continued in the early part of this year, at a slightly slower pace than last year. Export prices in the first quarter were up 6.8% in year-on-year terms, while import prices were up 9.6%, the terms of trade thus deteriorating by 2.6% in year-on-year terms. According to the balance of payments figures, the deficit in merchandise trade with the rest of the world amounted to EUR 283 million in the first quarter. The year-on-year deterioration in the terms of trade accounted for EUR 145 million of this, equivalent to 1.7% of quarterly GDP.

² According to SORS figures (CIF for imports, FOB for exports), and excluding any adjustments in coverage (explained in the Methodological Notes appendix to the bulletin), the merchandise trade deficit in March this year stood at EUR 147 million.

After narrowing for several months, the gap by which growth in merchandise exports to non-EU countries trails that in merchandise exports to EU Member States widened again in March. Growth in merchandise exports to EU Member States stood at 17.1%, compared with 7.1% for exports to non-EU countries. Year-on-year growth in exports of intermediate goods and consumer goods to non-EU countries was down more than a half on February, while exports of capital goods actually declined in year-on-year terms, by 6.7%. The gap by which growth in imports from EU Member States trails growth in imports from non-EU countries widened in March. Year-on-year growth in imports from EU Member States stood at 15.0%, compared with 31.4% for imports from non-EU countries. Imports of capital and consumer goods from non-EU countries having recorded year-on-year growth of more than 20%, growth in imports of intermediate goods

increased sharply from 11.9% in February to 35.0% in March. The main factor was an increase of around 70% in imports of mineral fuels and lubricants. Overall merchandise imports in the first quarter of the year increased by 21.3% in year-on-year terms, imports from EU Member States recording growth of 19.9%, and imports from non-EU countries recording growth of 26.4%. According to SORS figures, the overall merchandise trade deficit in the first quarter amounted to EUR 366 million. There was a deficit of EUR 439 million in merchandise trade with EU Member States, while a small surplus of EUR 73 million was recorded in trade with non-EU countries.

The gradual slowdown in growth in foreign demand is being reflected in the indicators of export orders and export expectations, which declined slightly in May. The seasonally adjusted indicator of export orders

Source: Bank of Slovenia.

in the manufacturing sector stood at zero in May, down 7 percentage points on April. The change in the export expectations indicator was also less favourable than in the previous months. It was down 2 percentage points on April at 24 percentage points. The export expectations indicator was down in year-on-year terms, by 12 percentage points, while the export orders indicator was up 21 percentage points in year-on-year terms in May.

Growth in imports of services continued to outpace growth in exports in the first quarter of this year, primarily as a result of faster growth in expenditure on other business services, and on intellectual property services. The decline in trade in services after the outbreak of the economic crisis was not as sharp as in merchandise trade. In contrast to merchandise trade, year-on-year growth in exports of services at the time of the deepest crisis declined faster than that of imports, partly as a result of the large proportion of services exports accounted for by services related to merchandise trade. The recovery in trade in services was slower than that in merchandise trade, year-on-year growth in imports of services having outpaced export growth between the beginning of 2010 and this March. Imports of services in the first quarter of this year were up 13.4% in year-on-year terms, while exports were up 10.1%. The result of these developments was that the surplus in the first quarter stagnated in year-on-year terms at EUR 235 million.

Exports of transport and tourism services³ recorded faster growth in the first quarter of this year than the corresponding imports. Imports of transport services in the first quarter were up 10.6% in year-on-year terms, while exports were up 16.4%. The surplus was up EUR 24 million at EUR 114 million. Among the most important services, year-on-year growth in imports and exports of communications services was also high, at more than 20%. In addition to communications services, above-average growth was also recorded in the first quarter by financial intermediation and trade intermediation services, although their low volume means that they had no significant impact on the results of trade in services. The only exception was expenditure on intellectual property services, which in the first quarter was up over 40% in year-on-year terms at EUR 81 million, thus accounting for more than 10% of all expenditure on services in the first quarter. Imports of tourism services were up 2.2% in year-on-year terms, while exports were up 7.5%. In light of these slightly more favourable developments, the surplus of trade in tourism services was up EUR 23 million in year-on-year terms at EUR 204 million.

The deficit in factor income in the first quarter widened by EUR 17 million in year-on-year terms to EUR 169 million, primarily as a result of an increase in net interest payments to the rest of the world. Over the last 12 months it amounted to EUR 614 million or 1.7% of GDP, compared with 2.0% of GDP a year earlier. The surplus in labour income was down EUR 2.5 million in year-on-year terms at EUR 27 million, while the deficit in capital income increased by EUR 15 million to EUR 196 million. The largest factor in the deficit in capital income was the net outflow of income from FDI, at EUR 131 million, EUR 99 million of which was accounted for by reinvested and undistributed profits. The largest factor in the year-on-year increase in the deficit in capital income was an increase in net interest payments to the rest of the world. These amounted to EUR 46 million in the first quarter of this year, up EUR 17 million in year-on-year terms. Just over EUR 9 million of this was the result of lower interest income on loans made to the rest of the world, while the remaining EUR 8 million was the result of

³ Transport services accounted for 29% of total exports of services in the first quarter, while tourism services accounted for 37%. The corresponding figures on the import side are slightly lower at 23% and 22% respectively.

a rise in financing costs in the rest of the world, primarily as a result of higher interest rates. The stock of foreign loans declined by just over a tenth between the end of 2009 and the end of the first quarter of this year, the government and the banks compensating by means of bond issues. Given that the majority of bonds were purchased by non-residents, the stock of liabilities on the basis of issued bonds and notes increased from EUR 8.7 billion to EUR 14.1 billion. The net outflow in income from securities in the first quarter nevertheless declined by EUR 6 million in year-on-year terms to EUR 18 million.

The surplus in current transfers in the first quarter stood at EUR 51 million, half of the surplus recorded in the whole of last year. Current transfers recorded a net inflow of EUR 68 million in March, as a result of a net inflow of EUR 74 million in official transfers. The majority of the net inflow in official transfers comprised funds from the EU budget for the implementation of the common agricultural and fisheries policy, and money from the structural funds.

Capital and financial account

While the government sector recorded a high net financial inflow of almost EUR 1.3 billion in March via a bond issue, the private sector recorded a net financial outflow of EUR 422 million. The private sector's net financial outflow in March was primarily the result of an increase in claims from currency and deposits, which was fuelled mainly by the domestic banks, and an increase in

claims from trade credits. These transactions were partly compensated for by an increase in liabilities from FDI, portfolio investments and trade credits. In contrast to the private sector, the government sector recorded a net inflow of financial assets in March in the amount of EUR 1,296 million, as a result of the issue of new bonds. The Bank of Slovenia recorded net financial outflow of EUR 639 million in March. The net external debt increased by EUR 292 million in March to stand at EUR 11.7 billion at the end of the month.

The private sector's claims against the rest of the world increased by EUR 715 million in March, primarily as a result of an increase in claims from currency and deposits and from trade credits. Claims against the rest of the world have already increased by EUR 1,728 million this year, almost EUR 1,250 million more than in the same period last year. The main factors in the increase in claims this year were the holdings of currency and deposits in the rest of the world of domestic banks and households, and investments in foreign securities. The latter increased again in March, by EUR 84 million, mostly as a result of corporate investments in equities (over EUR 60 million). Investments in securities increased by a total of EUR 538 million in the first quarter of this year. The strength of exports of merchandise and services is being reflected in claims from trade credits, which increased by EUR 138 million. Loans to non-residents also increased, by EUR 55 million, the largest contribution coming from long-term loans to non-residents

by the domestic banks, at EUR 23 million.

The private sector's liabilities increased by EUR 294 million in March, as a result of increases in non-residents' investments in domestic securities, FDI and trade credits. SID banka issued a new bond on international markets in March with a nominal value EUR 350 million, which was reflected in an increase of EUR 271 million in liabilities to the rest of the world from debt securities. FDI was up EUR 147 million in March, as a result of an increase of liabilities to related undertakings. On the liability side trade credits were in line with expansion of international trade, having increased by EUR 176 million. By contrast, the private sector's liabilities continued to decline in March as a result of debt repayments by the domestic banks, which made net repayments of EUR 129 million in loans from the rest of the world. The banks thus repaid EUR 521 million in loans in the first quarter of this year, EUR 267 million more than in the same period last year. Corporates recorded an increase in the stock of liabilities from loans in the first quarter, despite making

net repayments in March.

As a result of a new government bond issue, the gross external debt increased significantly more than gross external claims in March, which was reflected in an increase in the net external debt. Slovenia's net

external debt stood at EUR 11.7 billion at the end of March, up EUR 292 million on the end of February. The main factor in the increase in the gross external debt was the government sector, which recorded new borrowing of EUR 1.5 billion in March for the purpose of general financing. This was done via the issue of a 15-year bond (with a coupon rate of 5.125%), the yield of which stood at 103 basis points over the benchmark swap rate of corresponding maturity. The main contributions to a reduction in the gross external debt came from the monetary authority, which reduced short-term debt from currency and deposits, and the banking sector, which continued to reduce long-term debt. The main contributions to the increase in external claims came from short-term claims of banks and other sectors, which increased by EUR 634 million in March.

5 | Public Finance

The European Commission is projecting a slightly higher general government deficit than envisaged in the Stability Programme this year and, in particular, next year. According to this year's European Commission spring projections, the general government deficit according to the ESA 95 methodology will reach 5.8% of

Source: SORS, Ministry of Finance; Bank of Slovenia calculations.

GDP in 2011, while general government debt will reach 42.8% of GDP. Slightly less favourable assumptions of the macroeconomic environment were taken into consideration in this year's update to the Stability Programme. The projected deficit for 2011 is slightly lower than that of the European Commission at 5.5% of GDP, while the projected debt is slightly higher at 43.3% of GDP. The difference in the deficit projections for 2012 is larger: the European Commission is expecting a deficit of 5.0% of GDP, while the number in the Stability Programme stands at 3.9% of GDP. The general government deficit in 2012 is similar in both cases: the European Commission's number is 46.0% of GDP, while the Stability Programme's stands at 45.3% of GDP. The key differences in the fore-

casts for 2012 originate in the commitments to a reduction in expenditure already adopted by the government that have not yet undergone parliamentary procedure and are already included in the Stability Programme, but are not included in the European Commission forecasts. Most notably they include an assumption that pension reform is adopted, restrictive policy measures in respect of wages, social transfers and pensions, and measures to rationalise the functioning of government to reduce its intermediate consumption. With the rejection of the pension reforms in a referendum, and given the additional commitments that the government assumed in May, particularly those in respect of Slovenian Railways, achieving the guidelines and targets set out in this year's update to the Stability Programme and eliminating the excessive government deficit by 2013 as recommended by the European Council are of key importance.

The consolidated general government deficit in the first quarter was down in year-on-year terms, primarily as a result of higher growth in revenues. The gen-

eral government deficit amounted to EUR 590 million, EUR 135 million less than in the same period last year. Revenues and expenditure were both up on last year, but revenues recorded faster growth. The state budget deficit stood at EUR 672 million in April, down around EUR 260 million on the same period last year, primarily as a result of higher revenues from corporate income tax, VAT and the EU budget. The Health Insurance Institute recorded a deficit of EUR 26 million, up around EUR 14 million on the same period last year, primarily as a result of higher transfers to public institutes. Local government recorded a surplus of EUR 8 million in the first quarter, having recorded a deficit in the same period last year.

Growth in general government revenues was higher in the first quarter of this year as a result of increased tax revenues and higher inflows from the EU budget.

Growth in revenues during the first three months of the year stood at 8.8%, while revenues were up EUR 291 million in year-on-year terms. Most notably there was an increase in revenues from VAT (by EUR 110 million) and

money received from the EU (EUR 84 million), while non-tax revenues also increased. Personal income tax and social contributions were up on last year, while according to initial figures for the first five months of the year there was also an evident improvement in corporate income tax. Payments of taxes and contributions during the first five months of the year increased by 7.3%, primarily as a result of an improvement in revenues from corporate income tax, which in this period were up EUR 198 million in year-on-year terms, and VAT (up EUR 96 million). The increase in corporate income tax revenues was the result of net supplementary payments of tax for 2010 (with regard to prepayments last year), while the government made refunds of overpaid tax in 2009. Payments of excise duties during the first five months of the year were up on last year, despite a cut in excise duties on mineral oils.

Growth in general government expenditure in the first quarter was lower than growth in revenues. The main contributors to expenditure growth were increased transfers to households, and increased interest payments. Year-on-year growth in general government expenditure in the first quarter stood at 3.9%, expenditure having increased by EUR 157 million in year-on-year terms. The main factor in the increase in expenditure was increased interest payments on securities issued on the domestic market (up EUR 70 million). There was also an increase in transfers to households and corporate subsidies, both in connection with the economic crisis (this expenditure was up EUR 30 million in the first quarter), and payments for pensions (EUR 36 million). Expenditure on goods and services was up EUR 29 million. The largest decline was in expenditure on investment (down EUR 29 million). Payments into the EU budget related to GDP growth were also down (by EUR 11 million).

By the end of the first quarter the government had already undertaken the majority of this year's required borrowing, depositing the surplus funds with domestic banks. Together with repayments of maturing loan principal, the required financing of the deficit in general government expenditure over revenues and the deficit in the consolidated balance of financial claims and investments totalled EUR 1,369 million. The figure in-

cludes the recapitalisation of NLB d.d. (EUR 243 million), and two new loans to Greece in this period (a total of EUR 104 million). General government borrowing during this period amounted to EUR 3,064 million. The surplus over the required funds was invested mostly in the form of deposits at domestic banks, which increased by EUR 1,695 million. According to the financing programme for this year, the borrowing in the first quarter is projected to cover the anticipated commitments for payments in the state budget, although additional borrowing is possible. However, this year's total borrowing may not exceed EUR 4.2 billion.

The spread on Slovenian 10-year bonds has been slightly higher since April, primarily in connection with concerns surrounding the debt crisis in certain periphery countries, particularly Greece. The spread on Slovenian 10-year bonds over the benchmark German bonds averaged 133 basis points in May, similar to the April average (131 basis points). It had fluctuated at a level just below 120 basis points for almost a year before. The pronounced rise of the spreads seen in the periphery countries in the last two months was related to the addressing of debt problems in these countries, particularly in Greece. The main factors in the rise were the downgrading of Greece, and the deterioration in the outlook for Italy entailing a potential downgrading in the longer term. Cyprus was also downgraded, while Belgium saw its outlook deteriorate. In May EU finance ministers approved a three-year programme of assistance for Portugal, which

will amount to EUR 78 billion, to which Slovenia will also contribute. The IMF will contribute EUR 26 billion, while the EU will contribute EUR 52 billion. EU assistance will be divided into EUR 26 billion of assistance from the EFSM (European Financial Stability Mechanism) and EUR 26 billion of assistance from the EFSF (European Financial Stability Facility), which are designed to ensure the financial stability of the euro. Slovenia will also contribute within the framework of the EU mechanisms to the assistance to Portugal, primarily in the form of EUR 155 million in guarantees.

6 | Banking System*

After a large increase in March, in connection with a bond issue and an increase in government deposits, the banking system's total assets declined by EUR 1,796 million in April. Year-on-year growth stood at -3.1%. The main factors in the decline in total assets were a decline of EUR 982 million in government deposits and a decline of EUR 510 million in liabilities to banks. The main factors on the investment side were a decline of EUR 856 million in claims against the central bank, and a decline of EUR 560 million in claims against banks. There was also a decline in investments in securities, for the first time this year, while the banks continued to make repayments to banks in the rest of the world. Neither did lending to non-banking sectors begin its recovery in April.

Year-on-year growth in loans to non-banking sectors stagnated in April. The main factors in the decline of EUR 19 million in the net stock of loans to non-banking sectors were a decline in lending to non-residents, and, to a lesser extent, to the government sector and OFIs. The large domestic banks and the banks under majority foreign ownership accounted for most of the decline in the stock of loans.

April's stagnation in loans to non-financial corporations (NFCs) is a reflection of a decline of just EUR 3

million, significantly less than in the two previous months. Year-on-year growth in loans to NFCs nevertheless declined to -3.4%, having been negative since last August. The largest contribution to the decline in lending to NFCs came from the banks under majority foreign ownership; the large and small domestic banks recorded an increase in lending. The proportion of the stock of loans accounted for by long-term loans was up 3.2 percentage points on April 2010 at 66.2%.

Lending to households increased by EUR 26 million in April. This was the third consecutive increase this year, albeit significantly less than in March. Year-on-year growth has declined by 2.3 percentage points since last December, reaching 7.3%. The largest increase in the stock of loans to households was recorded by the banks under majority foreign ownership, while the large domestic banks were the least active in lending to households, their stock of loans declining slightly in April. The stock of long-term loans to households is increasing, and accounts for 80.8% of the total stock.

The main factors in April's decline in total assets on the funding side were a significant decline in government deposits at banks, and to a lesser extent a decline in liabilities to banks in the rest of the world and issued debt securities. After increasing its deposits by EUR 1,044 million in March, the government sector made withdrawals from the banking system in April. The decline

* The book figures for banks are used in this section, and differ in methodological terms from the published statistics.

in government deposits was largest at the large domestic banks. The banks made relatively large repayments of debt to banks in the rest of the world for the second consecutive month, of EUR 373 million, taking this year's total decline in such liabilities to EUR 831 million. Issued debt securities declined by EUR 325 million in April. Household deposits at banks declined slightly in April. In the context of the aforementioned decline in debt funding, the banking system's own funds increased by EUR 230 million, primarily as a result of the recapitalisation of NLB.

Despite rising impairment and provisioning costs, the banking system recorded a profit over the first four months of the year. Interest expenses have been growing more quickly than interest income this year, in contrast to the trend seen last year. Net interest during the first four months of the year was down 0.8% on the same period last year, while non-interest income was down 5.6%. The banking system's gross income thus declined by 2.2%. Impairment and provisioning costs amounted to EUR 50 million in April, taking the total during the first four months of the year to EUR 176 million, up 18.3% on the same period last year. The banking system nevertheless recorded a pre-tax profit of EUR 54 million during this period.

7 | Domestic Financial Markets

The market capitalisation of bonds on the Ljubljana Stock Exchange fell by 2.3% in April. The monthly volume of trading in bonds also declined, to half of its value in March, at EUR 3.5 million. The largest volume of trading was in 2nd-issue Slovenska odškodninska družba bonds, in the amount of EUR 1.3 million. The proportion of total stock exchange volume accounted for by bonds stood at 13.6%. SID banka made a prepayment of a portion of its SI01 bond issue in April with a total nominal value of EUR 304.8 million. The remaining nominal value of the SI01 issue is EUR 264.2 million.

The market capitalisation of shares on the Ljubljana Stock Exchange declined by 5.1% in April. The monthly volume of trading in shares also declined, by 60% to EUR 21.1 million. In contrast to March, which saw the highest monthly volume of trading in shares since October 2009, the April figure was lowest in the last two years. The proportion of April's total stock exchange volume accounted for by shares stood at 82.5%. Shares in Krka and Mercator accounted for just over three-quarters of the volume. The SBITOP fell to 759 in the second half of April, its lowest value since the outbreak of the financial and economic crisis. The fall could be a belated reaction to the release of audited corporate results for 2010.

The SBITOP rose slightly towards the end of April, finishing the month at 788, down 5.3%, taking the year-on-year change to -17.4%. The release of audited corporate results for 2010 was a major event in April. Under the impact of these results the P/E ratio on the prime market rose to 365.4.

The proportion of the market capitalisation of shares on the Ljubljana Stock Exchange accounted for by non-residents stood at 11.4% in April. Non-residents made net purchases of EUR 2.9 million in domestic shares, and net purchases of EUR 51.2 million in domestic bonds in April. RS59 bonds were notable for net purchases of EUR 66.4 million made by foreign investors. The largest net purchasers of bonds were residents of Germany (EUR 75.1 million), while the largest net sellers were residents of the UK (EUR 64.7 million). Slovenian blue chips accounted for the majority of net purchases of shares. The largest net sellers of shares were residents of Austria (EUR 16.8 million), while the largest net purchasers were residents of Germany (EUR 18.1 million).

Residents made net purchases of EUR 130 million in foreign bonds and net sales of EUR 4 million in foreign shares in April. The largest net sales of foreign shares were made by other financial intermediaries except insurance corporations and pension funds, in the amount of EUR 7.0 million. EUR 4.8 million of this was the result of the conversion of KD ID into a mutual fund. The sector of insurance corporations and pension funds

remained predominant in investment in foreign shares in April, with net purchases of EUR 5.3 million, primarily in euro area countries and the US. The main net purchaser of bonds was the banking sector, which made EUR 112.7 million of net purchases in foreign debt securities, primarily bonds from euro area countries. Slovenian households recorded net sales of EUR 1.6 million in shares and bonds in April.

The domestic mutual funds' assets under management increased by 1.9% in April to EUR 2,075.6 million, as a result of net inward payments of EUR 7.0 million and the conversion of KD ID into a mutual fund. The average unit price fell by 1.1%, although this did not lead to a decline in assets, as the conver-

sion of the investment company increased mutual funds' assets under management by EUR 58.9 million. Investors made net withdrawals of EUR 1.5 million from mutual funds under majority bank ownership in April, while net inward payments into non-bank mutual funds amounted to EUR 8.6 million. The largest net payments into mutual funds were into equity funds and bond funds, in the amounts of EUR 5.7 million and EUR 2.7 million respectively. The largest net withdrawals were recorded by balanced funds, at EUR 2.4 million. The largest purchases of mutual fund units were made by the sector of insurance corporations and pension funds, at EUR 10.4 million, while households and corporates made net withdrawals of EUR 4.9 million in total. The proportion of domestic mutual fund assets held in liquid assets⁴ was up 0.4 percentage points in April at 8.5%. There were varying movements in the values of the mutual funds' investments in April as a result of developments on the markets. The three major global indices ended April up in monthly and year-on-year terms: the DJ EuroStoxx index for western Europe rose by 3.1% (taking the year-on-year change to +8.9%), the S&P 500 index in the US rose by

2.8% (taking the year-on-year change to +14.9%) and the Hang Seng in China rose by 0.8% (taking the year-on-year change to +12.4%). The indices in the former Yugoslav republics fell: Croatia's CROBEX was down 2.5%, Serbia's BELEX 15 was down 1.7%, and Macedonia's MBI-10 was down 1.3%.

⁴ Liquid assets include cash, deposits, money-market instruments and government bonds.

IV. NOTES ON METHODOLOGY

General notes

Sectors

For data from 30 April 1999 onwards, a sectorization has been implemented according to the Regulation on Introduction and Implementation of Standard Classification of Institutional Sectors (hereinafter SKIS), published in the Official Gazette No. 56/98. SKIS, which implemented a national standard for economic sectorization, based on the European System of Accounts 95 and is in accordance with the System of National Accounts 93. According to SKIS, the economy is divided into the following sectors: non-financial corporations, financial corporations (central bank, commercial banks, and other financial institutions), general government, households, non-profit institutions serving households, and the external sector (non-residents).

The external sector comprises non-residents; the domestic sector, residents.

Residents of the Republic of Slovenia are defined as:

- companies and other legal entities with a registered office in the Republic of Slovenia, not including their branches abroad;
- branches of foreign companies entered in the Register of Companies of the Republic of Slovenia;
- sole proprietors or natural persons independently performing business activities as their primary occupation, with a registered office in the Republic of Slovenia or having permanent residence in the Republic of Slovenia;
- natural persons with permanent residence in the Republic of Slovenia;
- natural persons temporarily residing in the Republic of Slovenia, holding a residential or working visa valid for no less than six months; and
- diplomatic, consular and other representative offices of the Republic of Slovenia abroad which are financed from the Budget, as well as Slovene citizens employed at these representative offices and their family members.

All other persons and entities shall be deemed non-residents.

The domestic sector is broken down to the monetary sector and non-monetary sectors. The monetary sector consists of the Bank of Slovenia and other monetary financial institutions (banks, savings banks and money market funds). Domestic monetary financial institutions, owned by both residents and non-residents, are included.

Non-monetary sectors are: non-financial corporations, non-monetary financial institutions, general government, households, and non-profit institutions serving households. Non-financial corporations (enterprises) are legal persons – market producers of goods and non-financial services.

The non-monetary financial institutions sector comprises other financial institutions. Other financial institutions are: other financial intermediaries, except insurance corporations and pension funds (mutual funds, investment funds and financial leasing companies), financial auxiliaries (securities brokers/dealers, stock exchanges) and insurance corporations and pension funds.

The general government consists of the central government (administrative departments of state and central government agencies), local government (local administration, local agencies) and social security funds.

“Households” refers to resident individuals as consumers, resident individuals as sole proprietorships, and partnerships being market producers and having no independent legal status. The data of the latter, prior to 30 April 1999, were included in the enterprises sector.

Non-profit institutions serving households are clubs, political parties, trade unions, churches or religious societies, humanitarian and charity organizations, and professional societies.

Characteristics of the data

- The data present stocks of assets and liabilities at the end of the period.
- Data on stocks denominated in foreign currencies are converted into domestic currency using the official end-of-period middle exchange rate.
- Data in tables are not seasonally adjusted.

Table: Republic of Slovenia: General Information

The table shows basic general data on Slovenia and its economy. In the "Latest actual" column, the latest available data for the current year are published. Sources of the data are the Bank of Slovenia, the Ministry of Finance and the Statistical Office of the Republic of Slovenia.

1. MONEY AND MONETARY FINANCIAL INSTITUTIONS

Data in all tables present stocks items at the end of the period. Last published data are preliminary.

The change in the reporting could cause some inconsistencies in conceptual definitions of some items in the year 2005 data.

Until the end of December 2006 the data is published in the currency SIT, from 1 January 2007 the data is published in the currency EUR. The currency EUR in the data until the end of December 2006 is considered as foreign currency, from 1 January 2007 as domestic currency.

Change of Methodology

In May 2006 the tables of the Money and Monetary Financial Institutions chapter, have been changed. Structurally similar tables are based on the methodology of the European Central Bank (ECB) or of the euro area and no more on the methodology of the International Monetary Fund. The data source for the data of the MFI's in the changed tables is the report of the monetary financial institutions and not the bookkeeping report of the banks and savings banks. The main methodological changes are explained below.

The data from the new tables is available since December 2004, while the time series of the old tables up to March 2006 are still available on the Bank of Slovenia internet page (<http://www.bsi.si/en/>).

The main differences between the methodology of the ECB and the tables in the monthly bulletin up to April 2006 are as follows:

- The sector of the monetary financial institutions, MFI, contains banks, savings banks, savings and loans undertakings and money market funds, but it does not include old LB in KBM banks, while the banking sector without savings banks, savings and loans undertakings and money market funds but with the old LB and KBM is presented in the old bulletin tables.
- Balance sheet total according to the ECB's methodology differs from the balance sheet total according to the IMF's methodology mainly because of the different treatment of the loans. The loans are recorded on gross basis in the new tables and net of provisions in the old set. Consequently the stock of the loans is different.
- There is a difference among the stock of the items loans and deposits and debt securities – among the claims and liabilities, because of the inclusion of the negotiable/non-negotiable securities into the items loans/deposits and debt securities. According to the ECB's methodology, the non-negotiable debt securities are included into the loans/deposits and the negotiable debt securities into the debt securities.
- According to the ECB's methodology, the deals by procurement and internal affairs are included on a net basis, while before they were shown on a gross basis.
- There are differences in the composition of monetary aggregates according to national definition and harmonized monetary aggregates according to the ECB's definition that are described below.

Since April 2006 the data of the specific balance sheet items (loans, deposits, securities other than shares and issued debt securities) are in line with the ECB's request recorded according to their nominal values. The nominal value of a specific instrument is an amount of the principal, which is owed by the debtor to the creditor:

- loans: unpaid principal, not included the accrued interest, the commissions and other expenses,
- deposits: amount of the time deposits, the accrued interest not included,
- debt securities: nominal value.

Interest, which is subscribed to the principal and thus increases it, is the component of the nominal value.

Description of the balance sheet instruments

Below is a short description of the balance sheet aggregate items or instruments, as defined by the European Central bank:

Cash

Holdings of domestic and foreign banknotes and coins in circulation that are commonly used to make payments.

Loans

For the purposes of the statistical reporting scheme, this item consists of funds lent by reporting agents to borrowers, which are not evidenced by documents or are represented by a single document (even if it has become negotiable). It includes assets in the form of deposits, bad debt loans, in respect of which repayment is overdue or otherwise identified as being impaired, traded loans, subordinated debt in the form of deposits or loans and claims under reverse repos. The stock of loans is included into the item according to the "gross" principle.

Securities other than shares

Holdings of securities other than shares or other equity, which are negotiable and usually traded on secondary markets or can be offset on the market, and which do not grant the holder any ownership rights over the issuing institution. Besides negotiable debt securities this item includes: negotiable loans that have been restructured into a large number of identical documents and that can be traded on secondary markets and subordinated debt in the form of debt securities. The item does not include the accrued interest – which are classified into the item remaining assets, except when the separation is not possible (when the interest is the inseparable part of the market price).

Shares and other equity

Holdings of securities which represent property rights in corporations or quasi-corporations. These securities generally entitle the holders to a share in the profits of corporations or quasi-corporations and to a share in their own funds in the event of liquidation. Mutual fund shares and money market fund shares/units are included here.

Remaining assets

This item may also include: financial derivative positions with gross positive market values, non-financial assets (tangible or intangible), accrued interest receivable on loans and securities, the surplus from the deals by procurement, internal affairs.

Deposits

Amounts owed to creditors by reporting agents, other than those arising from the issue of negotiable debt securities. Deposits also cover loans as liabilities of MFIs, which represent amounts received by MFIs that are not structured in the form of deposits, non-negotiable debt securities issued, liabilities for the loans received and where they are not separately stated also deposits redeemable at notice, repos and traded loans.

Debt securities issued

Securities other than equity issued by reporting agents, which are negotiable and usually traded on secondary markets or which can be offset on the market, and which do not grant the holder any ownership rights over the issuing institution, and the subordinated debt issued by MFI's in the form of the debt securities. The accrued interest are not included in the stock data, but classified to the remaining liabilities. The amount of debt securities is shown net of own purchase.

Capital and reserves

This category comprises the amounts arising from the issue of equity capital, including also non-distributed benefits or funds, specific and general provisions against loans, securities and other types of assets. The item is adequately netted for the own shares owned. This item also includes the difference between the revenues and expenditures during the year and the money market fund shares/units issued.

Remaining liabilities

The remaining liabilities consist of accrued interest payable on deposits and debt securities, provisions representing the liabilities vis-à-vis third persons, gross amounts payable in respect of transit items, financial derivative positions. The surplus of the liabilities over claims from the deals by procurement, internal affairs is also included here.

Tables

In May 2006 the tables from 1.1. to 1.8 have been changed and substituted with the new ones, which enables partial continuity of the old time series.

The entry to the euro area (on 1.1.2007) caused a break in the time series of the statistical tables in the Monthly bulletin in cases where the "currency" is an attribute. An expected reclassification of the data between the individual columns in the tables, which keep the same name takes place, for example of the stock of outstanding loans in euros from the time series of "foreign currency" before the introduction to the time series of "domestic currency" after the introduction of euro. To enable easier reconstruction of this change, the shares of the Euro amounts in stocks of the foreign currency on 31.12.2004, 31.12.2005 and 31.12.2006 are published in the Methodological notes for the tables 1.3, 1.4, 1.5 in 1.6, where the reclassification occurred.

Note 1: With the publication of April 2011 data the corrected time series on Deposit with agreed maturity and Deposit redeemable at notice (Tables 1.2., 1.4., 1.6.) were published for the period January 2009 to May 2010 due to the change on the source of the data.

Table 1.1.: Monetary Aggregates

The table shows stock data at the end of month for monetary aggregates M1, M2 and M3, calculated according to the definition of the European Central Bank.

The main characteristics of monetary aggregates under the ECB's definition:

- Inclusion of liabilities of MFI sectors to EMU non-monetary sectors,
- Exclusion of the monetary neutral sector (the central government has the status of a monetary neutral sector),
- Limited maturity of items included (liabilities of up to 2 years and deposits redeemable at notice of up to 3 months only),
- Equal treatment of the liabilities in domestic and foreign currency,
- Inclusion of the money market fund shares/units into M3.

Composition of monetary aggregates, as defined by the ECB is:

- M1 contains currency in circulation and overnight deposits,
- M2 includes beside M1 also deposits with agreed maturity of up to 2 years and deposits redeemable at notice of up to 3 months,
- M3 includes M2, repurchase agreements and debt securities with the maturity of up to 2 years and money market fund shares/units.

The table is split into two parts: the first part (before the entry of Slovenia into EMU until the end of December 2006) presents Monetary aggregates of Slovenia and the second part (after the entry of Slovenia into EMU from 1 January 2007 onwards) presents the contribution of Slovenia to monetary aggregates of EMU.

The item 'Currency in circulation' is calculated on the basis of the Capital Share Mechanism (CSM) which foresees the split of the total amount of issued banknotes in the euro area between the different national central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins (which are in fact the liability of the central government) are added to the total amount of banknotes. The item 'Cash' held by the MFIs is deducted from the total amount of currency (banknotes and coins).

The contribution of the Slovenia to the euro area monetary aggregates does not represent monetary aggregates of Slovenia. The concept of residency is the one of the euro area. Due to the consolidation within the MFI sector on the level of euro area countries the aggregate M3 could become smaller than M2.

Table 1.2.: Consolidated Balance Sheet of the Monetary Financial Institutions

The table shows the end of the month consolidated balance sheet of Bank of Slovenia and other monetary financial institutions, presented in the tables 1.3. and 1.4. The bilateral claims and liabilities of the sectors S.122 and S.121 are netted out. On the liability side of the balance sheet the liabilities to the central government sector (S.1311) in certain items are excluded and are included in the remaining liabilities.

The item 'Banknotes and coins' is for series after 1 January 2007 calculated on the basis of the Capital Share Mechanism (CSM) which foresees to split of the total amount issued in the euro area between the different National central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins (which are in fact the liability of the central government) are added to the total amount of banknotes.

Table 1.3.: Balance Sheet of the Bank of Slovenia

The table shows the Bank of Slovenia's assets and liabilities at the end of month in line with the methodology of the ECB. According to the ECB's methodology the item 'Banknotes and coins' includes the data of coins in circulation (which are in fact the liability of the central government) and excludes the data of issued payment notes, which are included in the remaining assets.

The item 'Banknotes and coins' is for series after 1 January 2007 calculated on the basis of the Capital Share Mechanism (CSM) which foresees to split of the total amount issued in the euro area between the different National central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins are added to the total amount of banknotes.

no.	table	column	sector	title	share of euro		
					31.12.2004	31.12.2005	31.12.2006
1	1.3.	assets/ 3		Claims on foreign sectors (foreign assets)/ Foreign cash	58%	48%	54%
2	1.3.	liabilities/ 4		Liabilities/ Deposits/ Domestic sectors/ Other MFIs/ Foreign currency	100%	100%	-
3	1.3.	liabilities/ 8		Liabilities/ Deposits/ Domestic sectors/ General government/ Foreign currency	74%	72%	82%

Table 1.7.: Balance sheet of the Bank of Slovenia – by instruments

The table shows the data of the balance sheet of the Bank of Slovenia, split by instruments of the monetary policy. The table is composed according to accounting rules of the ECB and differs from the table 1.3. Balance Sheet of the Bank of Slovenia, which is composed according to the statistical methodology of the ECB.

Table 1.8.: Investment funds
General

Methodology of investment fund statistics in Slovenia is based on Regulation (EC) No 958/2007 of the ECB of 27 July 2007 concerning statistics on the assets and liabilities of investment funds and Guideline of the ECB of 1 August 2007 on monetary, financial institutions and markets statistics (recast). Time series in tables are available from December 2008 on, when the new reporting of investment funds was introduced. The data is revised when publishing data for the next period.

Note 1: Financial sectors comprise Bank of Slovenia, other monetary financial institutions (banks, saving banks and monetary funds) and other financial institutions (other financial intermediaries, except insurance corporation and pension funds, financial auxiliaries and insurance corporations and pension funds).

Note 2: Non-financial sectors are formed by non-financial corporations, general government, households and non-profit institutions serving households.

Note 3: Monetary funds are included in the sector of other monetary financial institutions and not in the other financial intermediaries, where investment funds are classified.

Deposit

This item consists of transferable deposits (sight deposits) and other deposits. Other deposits are deposits, which cannot be used for payments and cannot be exchanged for transferable deposits without significant constraints or extra costs. They comprise deposits with agreed maturity, certificates of deposits, which are non-tradable or whose tradability, although theoretically possible, is very limited and other non-transferable deposits.

Debt securities

Debt securities are short-term or long-term.

Short-term ones include all instruments of monetary market with original maturity of one year or less.

Long-term debt securities are securities with original maturity of more than one year and include bonds, instruments of monetary market with original maturity of more than one year and other debt securities.

Interest-bearing securities are shown including interests. In case interests cannot be included with debt securities, they are shown separately under the item other assets.

Shares and other equity

The item includes shares and units/shares of investment fund.

Shares are financial assets, which represent the right of ownership to the joint-stock companies. These financial assets usually give the owners the right to certain share in profit of the joint-stock companies and to certain share in their net assets when winding up.

Units/shares of investment fund include units or shares of open-end and closed-end investment funds.

Other assets

Under this item the claims on sold or mature investment, claims on Asset Management Company and trustee, interest and dividend claims, claims on securities' obligations, other corporate claims, accruals and prepaid expenditure are reported. Accruals and prepaid expenditure include deferred expenses or costs, short-term accrued revenues and also deferred interests.

Financial derivatives are either financial assets or financial liabilities; in balance sheet they are recorded as unnetted.

Loans

The item includes loans borrowed, covering loans, repurchase agreements and other forms of loan as techniques and tools for managing the investments of investment funds.

Investment fund shares/units

Investment fund shares/units represent total liability to shareholders or investors of investment fund.

Other liabilities

The item other liabilities include corporate liabilities of investment fund, namely liabilities from financial instruments' purchase, management liabilities, tax liabilities, liabilities of distribution of profits or other payments to holders of units or shareholders, other corporate liabilities, accruals and income collected in advance and financial derivatives.

Accruals and income collected in advance include accrued costs or accrued charges and prepaid income. Under this item deferred interests are also reported.

2. FINANCIAL MARKETS AND PAYMENT SYSTEMS

Interest rates (tables 2.1–2.4)

Table 2.1: Bank of Slovenia Interest Rates

Lombard loan: Within the framework of a standing Lombard facility, the Bank of Slovenia provides one-day Lombard loans to banks and savings banks with securities used as collateral. The pledged securities should amount to 110% of the amount of the Lombard loan.

The *repo interest rate* for the temporary purchase of treasury bills and tolar and foreign currency bills of the Bank of Slovenia with obligatory repurchase in seven days was the weighted arithmetic average of daily repo interest rates until March 2004 (effective interest rate). The new seven-day repo was introduced in March 2004; it is offered on a closed basis. The interest rate given is the latest valid interest rate.

Interest rate on banks' obligatory reserves: 1 percent per year since October 1991.

The *overnight-deposit interest rate* is an interest rate applying to deposits placed by banks and savings banks on an overnight term with the Bank of Slovenia.

Long-term deposit at the Bank of Slovenia was established in July 2004. The variable interest rate is defined once every two months for the next two-month period. It refers to the interest rate for 60-day tolar bills valid at the time of quotation, increased by 0.2 percentage points.

Tolar bills are registered securities subscribed by banks and savings banks with a maturity of 60 or 270 days. Sixty-day bills are offered on a permanent basis; 270-day bills were sold by auction until February 2004, and since then have been offered on a closed basis. Interest rates for tolar bills are given nominally; in the case of auctions they are effective rates. Offers of 270-tolar bills have been frozen since November 2004.

Foreign currency bills are transferable registered securities not issued in series. They are offered on a permanent basis and can be purchased by banks (or by other legal persons through banks until 3 May 2000). They are sold for euros (or German marks until February 1999, or U.S. dollars until June 2006) at a discount with maturities of two to four months.

A *penalty rate* is generally employed in cases of overdue payments. The penalty rate has been determined by the Law on the Legal Penalty Rate since 28 June 2003.

Interest rates for a certain type of instrument in the table are those last valid in a period (except in the case of effective interest rates). The annual averages of interest rates are computed as simple arithmetic averages of monthly data, if such data are available.

Table 2.2: Interbank Money Market Rates and Indexation Clause

Interbank market

SIONIA/SITIBOR

Until 31 December 2006, the figures are annual nominal interest rates for unsecured Slovenian tolar deposits on the Slovenian interbank market. The interest rate for overnight deposits (SIONIA) is the weighted average interest rate for overnight deposits.

SITIBOR is the rate at which Slovenian interbank term deposits are offered by one prime bank to another prime bank.

SIONIA and SITIBOR were valid from 14 July 2003 to 31 December 2006. Break of series in January 2007.

EONIA/EURIBOR

Eonia® (Euro OverNight Index Average) is the effective overnight reference rate for the euro. It is computed as a weighted average of all overnight unsecured lending transactions undertaken in the interbank market, initiated within the euro area by the contributing banks.

The Euro Interbank Offered Rate – “Euribor®” – is the money market reference rate for the euro. It is sponsored by the European Banking Federation, which represents the interests of 4,500 banks in 24 Member States of the European Union and Iceland, Norway and Switzerland, as well as the Financial Markets Association. Euribor® is the rate at which euro interbank term deposits are being offered within the EMU zone by one prime bank to another

Indexation clauses

TOM

The tolar indexation clause (TOM) is an annual interest rate calculated by the Statistical Office of the Republic of Slovenia and used for preserving the value of financial liabilities and assets in domestic currency.

TOM (monthly): since 5 August 1995, the average of the previous 3 months' inflation. (Until June 1995, indexation was based on the so-called R, which was equal to the previous month's inflation rate; from 1 June to 4 August 1995, indexation

was based on the average of the previous 3 months' inflation.) From February 1996, 4 months; from December 1996, 6 months; and from May 1997, 12 months. Financial liabilities and assets in domestic currency with maturity less than 1 year have not been revalued since July 2002.

Foreign exchange indexation clause USD and CHF

The monthly rate is the growth rate of the end-of-month exchange rate for USD and CHF.

The annual rate is computed from the monthly rate on the conform basis, taking into account the actual number of days in the month and the year.

Table 2.3: European Central Bank Interest Rates

Counterparties can use the **deposit facility** to make overnight deposits with the NCBs. The interest rate on the deposit facility normally provides a floor for the overnight market interest rate.

Main refinancing operations are regular liquidity-providing reverse transactions with a frequency and maturity of one week. They are executed by the NCBs on the basis of standard tenders and according to a pre-specified calendar. The main refinancing operations play a pivotal role in fulfilling the aims of the Eurosystem's open market operations and provide the bulk of refinancing to the financial sector.

Counterparties can use the **marginal lending facility** to obtain overnight liquidity from NCBs against eligible assets. The interest rate on the marginal lending facility normally provides a ceiling for the overnight market interest rate.

Table 2.3.1.: Harmonised long-term interest rates for convergence assessment purposes

The long-term interest rate statistics refer to the monthly average interest rates for long-term government bonds issued by the central government, quoted as percentages per annum.

The fourth Maastricht criterion is based on the level of long-term interest rates. Article 4 of the Protocol on the convergence criteria, as referred to in Article 121 of the Treaty, states that compliance with the fourth convergence criterion "shall mean that, observed over a period of one year before the examination, a Member State has had an average nominal long-term interest rate that does not exceed by more than 2 percentage points that of, at most, the three best performing Member States in terms of price stability. Interest rates shall be measured on the basis of long-term government bonds or comparable securities, taking into account differences in national definitions."

The European Central Bank and the European Commission have, together with the national central banks, identified the representative debt securities that can be used to measure long-term nominal interest rates and, if necessary, alternative long-term interest rate indicators where suitable government bonds are not available

Data until December 2006 refer to the yield to maturity on a reference long-term general government bond, issued in Slovenian tolar and with a nominal interest rate. Since 1.1.2007 the data show the yield to maturity on a basket of long-term general government bonds, issued in euro and with a nominal interest rate.

Until 2003 a yield to maturity on a primary market is presented, and afterwards a yield to maturity on a secondary market.

2.4: Monetary Financial Institutions Interest Rates

Data from January 2003–April 2005

Estimates on MIR statistics refer to interest rates on new business applied by the eight biggest resident banks (selected by balance-sheet-total criterion) to loans denominated in Slovenian tolar vis-à-vis domestic households and non-financial corporations.

Interest rates are calculated as a weighted average of all interest rates on new business in the instrument category.

Loans to non-financial corporations (breakdown by amount category): loans in SIT are converted into EUR by the monthly average exchange rate and then classified according to amount up to and including EUR 1 million, or over EUR 1 million.

"Loans to households for other purposes" include only loans to sole proprietors for current and capital assets.

Data on APRC in the period from January to August 2003 refer to six respondents, and from August 2003 to December 2003, to seven out of eight total respondents.

Data from May 2005–December 2006 covers business conducted in SIT by the total MFI population in Slovenia.

MFI interest rate statistics cover those interest rates that resident monetary financial institutions (MFIs, i.e. "credit institutions") apply to euro-denominated deposits and loans by households and non-financial corporations which are residents of the euro area.

The legal requirements for MFI interest rate statistics are laid down in Regulation ECB/2001/18, which defines the statistical standards according to which monetary financial institutions must report their interest rate statistics. This regulation is complemented by the Manual on MFI Interest Rate Statistics, which further clarifies and illustrates the statistical requirements. The MFI interest rate statistics refer to the interest rates individually agreed between a credit institution or other institution and its customer. They are converted to an annual basis, taking into account the frequency of interest payments, and are quoted in percentages per annum. At the euro area level 45 interest rate indicators with the corresponding volumes are collected, of which 31 refer to new business and 14 to outstanding amounts.

Outstanding amounts are defined as the stock of all deposits placed by customers, i.e. households and non-financial corporations, with credit institutions or other MFIs, and the stock of all loans granted by credit institutions to customers. An interest rate on outstanding amounts reflects the weighted average interest rate applied to the stock of deposits or loans in the relevant instrument category in the time reference period. Interest rates on outstanding deposits cover all deposits placed and not yet withdrawn by customers in all periods up to and including the reporting date. Interest rates on outstanding loans cover all loans used and not yet repaid by customers in all periods up to and including the reporting date, although excluding bad loans and loans for debt restructuring at rates below market conditions. MFI interest rates on outstanding amounts are hence statistics on the interest rates actually applied to all "open" deposits and loans.

New business is defined as any new agreement between the household or non-financial corporation and the credit or other institution. New agreements comprise all financial contracts, the terms and conditions of which specify for the first time the interest rate on the deposit or loan, and all new negotiations of existing deposits and loans. The prolongation of existing deposit and loan contracts which are carried out automatically, i.e. without any active involvement of the household or non-financial corporation, and which do not involve any renegotiating of the terms and conditions of the contracts, including the interest rate, are not considered new business.

The annual percentage rate of charge (APRC) is an effective lending rate that covers the total cost of credit to the consumer, i.e. the interest payments as well as all other related charges. It covers the total cost of credit to the consumer, as defined in Article 18(2) of the Consumer Credit Act. Charges defined in Article 18 of the Consumer Credit Act are excluded. APRC is compiled only for consumer credit and loans to households for house purchases (sole proprietors excluded).

Weighting method: The interest rates on new business are weighted by the size of the individual agreement.

The new interest rate statistics replace the average bank interest rates published by the Bank of Slovenia. The coverage and definition of the new statistics differ substantially from those previously published. Therefore, a direct comparison of the new and old rates is not possible.

* Households = sole proprietorships + individuals + non-profit institutions serving households

**APRC data includes households without sole proprietorships and without non-profit institutions serving households

Note 1: For this instrument category, new business and outstanding amounts coincide.

Note 2: For this instrument category, households and non-financial corporations are merged and shown under the household sector.

Exchange rates (Tables 2.6.1–2.6.2)

Table 2.6.1: Selected Bank of Slovenia Exchange Rates – Average Rates to 31.12.2006

These tables show the Bank of Slovenia middle rates until 31 December 2006. Annual rates are computed as arithmetical averages of monthly rates. Monthly averages are computed as arithmetical averages of daily rates (Sundays and holidays excluded).

A new currency, the Croatian kuna (= 1,000 former Croatian dinars) was introduced on 30 May 1994.

The Polish zloty was denominated on 1 January 1995 at the exchange rate of 1 new zloty for 10,000 old zlotys.

Table 2.6.2: European Central Bank exchange rates

Reference exchange rates of the European Central Bank are shown, representing middle exchange rates of the Bank of Slovenia. The average yearly and monthly exchange rates are calculated as the arithmetical average of daily exchange rates, excluding days on which the TARGET system was closed. This includes Saturdays, Sundays and the following holidays: New Year's Day (1 January), Good Friday, Easter Monday, Labour Day (1 May), Christmas (25 December) and 26 December.

Conversion rates between the euro and the currencies of EU Member States that have adopted the euro are irrevocably fixed and valid since 1 January 1999 (since 1 January 2001 for the Greek drachma).

The conversion rate for the Slovenian tolar is valid as of 1 January 2007, the conversion rate for the Cyprus pound and Maltese lira as of 1 January 2008 and the conversion rate for the Slovak koruna as of 1 January 2009.

Payment systems (Tables 2.7 to 2.13)

General

Data prior to 2007 are published in tolar; from 2007, data are published in euros.

Due to rounding in Tables 2.11 to 2.15, sums of quarterly data do not always totally comply with relevant yearly data.

Table 2.7: TARGET2 and SEPA internal credit transfer (SEPA IKP) transactions

Note 1: On 1st January 2007 the transaction limit for payments submitted to the Giro Clearing system (multilateral net system for small value payments), raised from EUR 8.354,21 to EUR 50.000.

Note 2: SEPA internal credit transfer system (the SEPA IKP) is operated by the clearing company Bankart d.o.o. SEPA IKP system was established on 4 March 2009. Before SEPA IKP establishment the same transactions were processed in Giro Clearing payment system, operated by Banka Slovenije. Giro Clearing payment system was closed down on 1 August 2009. Data regarding transactions in the Giro Clearing payment system are published until March 2009. Data regarding transactions in both systems are published together (the sum of transactions in the Giro Clearing and SEPA IKP systems) for the period from March to July 2009. Data regarding payments in the SEPA IKP system are published from August 2009 on.

Note 3: Until 29th December 2006 payments data on domestic payments between Slovenian participants are published for domestic Slovenian RTGS system (values in billion Slovenian tolar). As of 1st January 2007 domestic payments of Slovenian TARGET participants represents payments sent from Slovenian credit institutions to another Slovenian payment institution, direct participated in the TARGET system.

As of 19th November 2007 payments in TARGET 2 system are considered.

Note 4: As of 1st January 2007 cross-border payments of Slovenian TARGET participants represents payments sent from Slovenian credit institutions to non-Slovenian credit institutions, direct participated in the TARGET system.

As of 19th November 2007 payments in TARGET 2 system are considered.

Note 5: Gross value is the total value of all payment orders executed in the payment system.

Note 6: Net value is the amount required for the settlement of the gross value of payments in a payment system that uses netting. It represents the sum of the net monetary liabilities of all participants of the payment system to other participants of the payment system, calculated as the positive difference between the payment orders sent to the system and the payment orders received from the system for each participants of the payment system in an individual settlement cycle.

Table 2.8 Payment Cards

Note 1: Credit card: A card indicating that the holder has been granted a line of credit. The credit granted may be settled in full by a specific date each month (delayed debit card, i.e. charge card), or may be settled in part, with the balance taken as extended credit (credit card).

Note 2: Debit card: A card which enables the holder to have purchases directly charged to funds on the cardholder's bank account.

Note 3: Cards issued abroad: Payment cards issued abroad and used for payments in Slovenia, mostly by non-residents.

Note 4: Volume and value of transactions abroad: Use of cards issued in Slovenia for payments abroad.

Number of payment cards in circulation: Number of valid payment cards held by residents and non-residents issued in Slovenia. Data refer to the end of each quarter/year.

Number and value of payments refer to the use of payment cards in each quarter/year.

Domestic card: Payment card issued by banks and enterprises resident in Slovenia without licence agreements with foreign issuers.

Licence card: Payment card issued by banks and enterprises resident in Slovenia under licence agreements with foreign issuers.

Bank card: Payment card issued by banks.

Retailer card: Payment card issued by non-banking institutions, mostly for use at specific retail outlets.

Personal card: Payment card issued to a natural person (family cards included).

Business card: Payment card issued to a legal entity.

Table 2.9 Other Payment Instruments and Innovative Payment Schemes

Note 1: Data refer to the end of each quarter.

Note 2: Prior to 2007 the data refer to payment transactions and money withdrawals at manual POS and EFT POS terminals in Slovenia. From 2007 on, the data on money withdrawals are not included.

Table 2.10 Electronic Banking

Note 1: Only debt transactions are included.

Table 2.11 Credit Transfers

A paper-based order is a payment instrument related to a credit or debit transfer, in which the payer submits an order on a paper-based form. In case of credit transfer it means any instruction by an account holder to his payment service provider requesting the transfer of funds from his account to another account (also between accounts of the same account holder). Includes submissions by telefax if they require manual intervention in order to be transformed into electronic payments.

Special payment order is a special form of paper-based payment order, which is issued by a payee (beneficiary) to be paid by the debtor. The special payment order is presented by the payer at the bank, which then debits his transaction account and transfers the amount to the account of the payee, potentially via several other credit institutions as intermediaries and/or one or more payment and settlement systems. A contemporary form can assure automated processing with ICR technology (Intelligent Character Recognition) or classic manual processing.

A non-paper-based credit transfer is any credit transfer which the payer submits without the use of paper forms i.e. electronically. Includes submissions by telefax or other means if they are transformed into electronic payments without manual intervention.

A standing order is a non-paper-based credit transfer and means an instruction from a payer to his bank to make a regular payment of a fixed amount to a named creditor. The payer authorises his bank (the bank at which he maintains a transaction account) to pay a specified amount regularly to another account. The payment must be repeated at least five times. The execution of payments occurs under exact conditions on a particular day of the month.

Direct credit is special form of payment instrument related to a credit transfer, initiated by the payer, which enables a cashless fund transfer from payer to payee. Direct credit is used for the execution of small value payments, e.g., salaries, pensions, dividends and similar payments, to a large number of creditors.

Table 2.12 Debit Transfers

Direct debit is an authorised debit on the payer's bank account initiated by the payee. It is a payment instrument consisting of automatic debiting of the debtor's account for goods and services delivered by the creditor. The debtor (payer) authorises his bank to transfer funds from his bank account to the creditor's account and the creditor to submit a payment order to the creditor's bank to be paid. A typical example is an electricity bill payment.

A special money order is a standardised paper-based debit instrument used to remit money to the named payee. A special money order is issued by a bank, allowing the individual named on the order form to receive a specified amount of cash on demand.

Table 2.13: Network of Commercial Banks

Note 1: Statistical regions, source: Statistical Office of the Republic of Slovenia, 31 March 2000.

Map of Slovenia by Geodetic Institute of Slovenia

Note 2: Data referring to the Post Bank of Slovenia do not include units of the Post of Slovenia that operate for the Post Bank of Slovenia on a contractual basis.

3. BALANCE OF PAYMENTS AND EXTERNAL POSITION**Balance of Payments****General notes**

In most respects the Slovenian Balance of Payments (BOP) conforms to the methodology of the IMF's Balance of Payments Manual, fifth edition (1993).

Characteristics of the Data

Minus sign (-) indicates imports or surplus of imports over exports in the current account, increase in assets or decrease in liabilities in the capital and financial accounts, and growth of reserve assets.

Data on transactions are converted from the original currencies to EUR using the daily Bank of Slovenia or ECB's exchange rates, or average exchange rates for the period if the exact date of transaction is not known.

Revision policy

Revision of balance of payments, the international investment position and gross external debt data occur as follows:

Revisions in **monthly data** are published with the release of:

- the following month's data;
- the corresponding quarterly data;
- the corresponding revised quarterly data;
- the international investment position and external debt data for the corresponding year; and
- the revised international investment position and external debt data for the corresponding year.

Revisions in **quarterly data** are published with the release of:

- the following month's data;
- the data on the following quarter;
- the international investment position and external debt data for the corresponding year; and
- the revised international investment position and external debt data for the corresponding year.

Revisions for the **annual** balance of payments, international investment position and external debt data are published with the release of the data for the following years.

Annual data are revised for the year t-1 and t-2. In the case of major methodological changes or discrepancies among the data sources, data for the year t-3 will be revised as well.

Data sources

- **The external trade statistics (Statistical Office of the Republic of Slovenia)** is the main source of data on trade in goods. Since 1 May 2004, the source of data on trade in goods among Slovenia and EU Member States is the Intrastat reporting. The source of data on trade in goods with other countries is the single administrative document (Extrastat reporting).
- **Reports on account balances and transactions between residents and non-residents (C, PPT, PPV):**
 - report on account balances at domestic banks – PPV (until 31 December 2004),
 - report on account balances abroad – C (until 31 December 2006),
 - report on transactions through accounts at domestic banks – PPT (until 31 December 2008),
 - report on transactions through accounts abroad – C (until 31 December 2008).

All banks which conducted international payment transactions and all residents with open accounts abroad were obliged to report. The resident issuer/beneficiary of the payment was obliged to forward data on the type of transaction. Since 2009 only banks which conduct international payment transactions report transactions with nonresidents that exceed threshold EUR 50.000. Data are used for quality control purposes only.

- **Reports on trade in services, part of trade in goods and on current/capital transfers with nonresidents (BST)** are the sources of data on services (excl. travel), data on coverage adjustments of goods item and data on current and capital transfers (excl. transfers with EU budget) from 2008 onwards.
- **Reports on transactions with securities (VRP) and data from the Securities Clearing Corporation (KDD)** are the sources of portfolio investments (debt and equity securities) and financial derivatives since 2004.
- **Reports on purchased/sold foreign debt securities without domestic brokers (DVP)** are the sources of portfolio investments in foreign debt securities, carried out without domestic brokers, from 2007 onwards.
- **Data regarding drawn/un-drawn credit transactions from foreign credit registration forms (KR)** are the source of data on loans of all sectors until 2004; in 2005 and 2006 they are only the source for the non-banking sector. A registration was obligatory for all financial credits and long-term commercial credits; since 1997 from the same source are also obtained the data on the purpose of direct payments of foreign lenders, used to settle the obligations of domestic borrowers to other non-residents.
- **Reports on monetary financial institutions (PORFI)** are the source for data on loans, cash and deposits of the banking sector since 2005.
- **Reports on credits received and granted and deposits with non-residents (KRD)** are the source for data regarding loans and deposit of all sectors, except banks, since 2007.
- **Reports on short-term receivables and liabilities from operations with non-residents (SKV)** are the source for short-term trade credits and advances since 2002.
- **Reports on investments (SN)** are until 2007 the source for reinvested earnings of direct investments. From 2008 onwards these reports are source also for all other direct investment transactions in equity and related income as well as for portfolio equity transactions without involvement of domestic dealers.
- **Accounting data of the Bank of Slovenia**
- **Accounting data of banks (KNB)**
- **Budget data on the transactions of government sector between the Republic of Slovenia and EU** (from 2004 onwards)

Quarterly data on financial account's statistics are source for financial derivatives for all sectors except the central bank (since 2007).

- **Estimates and other sources**
 - estimate of purchases of foreign currency and cheques from foreigners in exchange offices (part of the travel category) - until 2004,
 - estimate of expenditures on travel abroad including purchases of goods abroad - until 2004
 - estimate of Italian pensions (UMAR) until the end of 1998,
 - estimate of transactions with foreign currencies and the deposits of Slovene households (until 2006),
 - estimate of labour income (SURS),
 - data on pensions paid to non-residents (ZPIZ),
 - survey on the write-downs of debt from trade in goods and services abroad,
 - estimates for exports and imports of travel - from 2005 onwards (detailed explanation under item Travel),
 - estimate of cash transactions on tourism and labour income (from 2007 onwards),
 - quarterly data on consumption of foreign embassies in Slovenia (SURS, from 2008 onwards),
 - migrants' transfers - outflows (bilateral data between countries, from 2008 onwards),
 - households' transfers (SURS, from 2008 onwards),
 - assets acquired directly by tenders and programmes of EU (SURS, from 2008 onwards),
 - data on nonresidents' investments in real-estate in Slovenia (GURS, from 2008 onwards).

Current account

Goods

Data regarding general goods can be obtained from the Statistical Office of the Republic of Slovenia. Prior to Slovenia's accession to the EU data were available from standard customs documents. Since 1 May 2004, data are available from single administrative documents for trade in goods with non-EU countries and from Intrastat reports for trade with EU Member States.

Adjustments of CIF/FOB – data on import by CIF value were adjusted to FOB value with the help of a coefficient which is equal to the weighted average of coefficients between CIF and FOB values of the goods imported (in an available sample), separated with regard to type of goods, type of transport and partner's country. For 2004, a new CIF/FOB coefficient was calculated (1.0306); prior to that the coefficient was 1.0393. Since 2004 on, the coefficient is calculated every year based on a five year average.

Coverage adjustments - made for goods exported and imported without customs declarations (the ITRS source until 2007, the reports of duty free shops and consignment warehouses until 2005, BST reports as source from 2008 onwards). Since 1 May 2004, coverage adjustments also include estimated data on imports of motor vehicles from EU by natural

persons not covered by Intrastat System.

Services

Transport

Transportation services are classified according to mode of transport and furthermore according to what is carried. The source of records on transportation services is the ITRS until 2007 and BST reports from 2008 onwards.

Travel - methodology until 2004

The ITRS sources used in the compilation of the "Incoming travel" category include: a.) health- and education-related services; b.) payments made by non-residents to Slovenian tourist agencies; c.) net withdrawals in tolar from non-resident accounts; d.) money spent in casinos by non-residents; e.) data on sales of goods to non-residents in duty-free shops and consignment warehouses; f.) payments with credit cards; and g.) sales of tolar to non-residents abroad.

The data on sales of tolar to non-residents in Slovenia are estimated based on the number of border crossings by foreign travellers and on the number of nights spent in the country by foreign tourists.

Data for the category "Expenditure on travel" come from the ITRS and estimations.

Travel - methodology since 2005 onwards

Main data sources to estimate the **export** of travel are the following surveys and researches conducted by Statistical Office of the Republic of Slovenia (SURS):

- Survey on foreign tourists in summer season is used to define the structure of foreign tourists according to their primary aim of travel (business travel, health care, education, other) and expenditures of each type of foreign tourists ; three-year's survey -last conducted in 2006)
- Survey on foreign travelers (to define the structure of travelers broken down by same-day travelers and transit travelers and their respective expenditures).
- Arrivals and over-night stays of foreign tourists broken down by countries of their residency (monthly survey).
- Number of border crossings (to define the population of foreigners entering Slovenia).

Based on data sources the following six categories of data are calculated and finally broken down by countries using data on mobile phone operators;

- Business travel,
- Health - related travel,
- Education,
- Other,
- Same- day travelers,
- Transit travelers.

Main data source to estimate the **import** of travel is SURS's survey TU_ČAP (Quarterly survey on travel of domestic citizens). The Survey provides the value of expenditures of domestic population traveling abroad (same - day trips and longer trips) and the amount spent for transportation to and from the foreign destination, which is then subtracted from total expenditures in order to avoid double counting (since it is already included in transport services).

Based on TU_ČAP data source the following five categories of data are calculated and finally broken down by countries using data on mobile phone operators;

- Business travel,
- Health - related travel,
- Education,
- Other,
- Same - day travelers.

Construction services

The source of data is the ITRS until 2007, all construction undertakings are recorded under construction services on net basis (the revenues earned on works performed abroad are recorded net of the corresponding expenditures). From 2008 onwards the sources of data on construction services are BST reports.

Insurance services

Premiums on life and non-life insurance are split into two components: (i) the service charge included in insurance services; and (ii) the premium in a narrow sense, recorded as a current transfer. The calculation of the service charge is based on a fixed percentage of premium payments. The source of data on insurance services is ITRS until 2007, this source was replaced by BST reports for 2008 data onwards. Insurance services include commissions of insurance companies and 45 % of premium payments. Insurance claims and other part of nonlife insurance premiums are included in current transfers, claims and part of life insurance premiums represent assets/liabilities of financial account.

Government services

All transactions settled through the accounts of Slovenian embassies abroad, as well as transactions coded as government services settled through the accounts of Slovenian banks with foreign correspondents, are included in this item until 2007 with the ITRS as the source of data. From 2008 onwards the source of data is BST report, government services include all services of slovenian representative bodies abroad. From the same year there are included data on consumption of foreign embassies in Slovenia. Data are provided by SURS (on the basis of taxation data).

Also for all other types of services the ITRS source has been discontinued as of 2008, when the new source (BST report) for data on trade in services (excl. travel) has been introduced.

Income

Labour income – receipts. Since 2002, data from the Labour Force Survey (SURS) and Eurostat data have replaced ITRS and estimates as sources of labour income for the work of Slovene residents abroad.

Labour income - expenditures. ITRS is the source for labour income - expenditures until 2004. Data relating to 2005 onwards are provided by SURS on the basis of Labour Office register for the number of nonresidents, who at the end of each quarter possess valid work permits and who actually worked in Slovenia less than one year and data by The Health Insurance Institute of Slovenia for nonresidents, who at the end of each quarter don't need valid work permits and who actually worked in Slovenia less than one year. Data on daily migrant workers from Austria, Italy, Hungary and Croatia are also included.

Since 2002, labour income (receipts and expenditures) is included according to the gross principle (including taxes and social contributions).

Capital income – Since 2004, VRP reports have replaced ITRS as a source for income from equity securities. Annual reports on capital investments are the source for data regarding reinvested earnings. Data on reinvested earnings in the current year are estimated - (a three year monthly average of actual data on total earnings, less extraordinary incomes [the source being annual reports on investments], is decreased by dividends and other incomes, paid in the current month (the source being monthly reports on investments from 1.1.2008 onwards, previously the source was ITRS). The estimate is replaced by actual data only when these data are available. Data on disproportionately large exceptional payments of profits relative to the recent level of dividends and earnings (superdividends) are excluded from income and included in direct investment as withdrawals of equity (from 2008 onwards). Until 2003, the source of income from debt securities was ITRS; since 2004 the sources are reports on securities transactions (VRP reports) and KDD data. Until 2004, the source on income from other investments was ITRS for the banking sector; the source was later changed to reports on monetary financial institutions (PORFI). Until 2006, the source on income from other investments for the non-banking sector was ITRS; since 2007, the source is KDD reports. Income from loans (including long-term commercial credits) and cash reserves have been managed according to the accrual principle since 2002; since 2007, total income from other investments is managed according to the same principle. Since 2004, the accrual principle is used for income from bonds and notes.

Current transfers

Current transfers of other sectors are subdivided into workers' remittances, insurance and other transfers. Current transfers of the government sector and other transfers of other sectors are from 2002 onwards subdivided into taxes, subsidies, social contributions, social benefits and other transfers. The main data sources are the ITRS and estimates until 2007, from 2008 onwards the sources are BST reports and from 2004 onwards, data on EU transfers of the government sector are obtained directly from the Ministry of Finance (budget data). Migrants' transfers - outflows (data provided by foreign central banks) and transfers of households (SURS survey) are included from 2008 onwards.

Capital and financial account

Capital account

Capital transfers

The ITRS is the source of data until 2007. Migrants' transfers cover not only payments recorded by domestic banks, but also the changes in residency of accounts held with these banks. From 2008 onwards data are obtained from BST reports, but data on capital transfers between the Republic of Slovenia and the EU are from 2004 onwards obtained directly from the Ministry of Finance (budget data). Since 2002, the Bank of Slovenia also estimates the value of write-downs of debt from trade in goods and services abroad. From 2008 onwards, there are also included data on assets acquired directly by tenders and programmes of EU (SURS, Annual survey on investment in tangible assets).

Financial account

Direct investment

Direct investment is until 2007 recorded on the basis of reported payments through domestic banks and data from customs declarations, from 2008 the source is direct monthly report SN. Data on reinvested earnings are based on yearly surveys on balance and transactions with affiliated enterprises (SN) and are included monthly as one-twelfth of the yearly figure. Data regarding reinvested earnings for the current year are estimated. Until 1997, the purchase and sale of all shares and equity were included in this item. Data on disproportionately large exceptional payments of profits relative to the recent level of dividends and earnings (superdividends) are included in direct investment as withdrawals of equity (from 2008 onwards).

From the beginning of 1997, purchase and sale of shares that assure more than 50 percent of a company's equity (a controlling interest of shares) and shares issued by domestic companies on the primary markets with the purpose of increasing the nominal capital of the company are included in this item, due to capital control measures. With the new Foreign Exchange Act in 1999, the 10% rule is applied to direct investment. Data of Surveying and Mapping Authority of the Republic of Slovenia on nonresidents' investments in real-estate in Slovenia are included from 2008 onwards.

Since 2001, there is a break in the data series in the category "Direct Investments - Other Capital". Since that time, loans

and long-term commercial credits between affiliated companies (10% or more of capital share) are included in this category. Until 2000, these types of transactions were included in the category "Other Investments". Since 2002, the category "Direct Investments - Other Capital" also includes short-term commercial credits between affiliated companies. Since 2005 other capital claims / liabilities does not include banking sector's claims/liabilities with direct investment relationship (these data are included in item other investment/loans).

Portfolio investment

Transactions are divided into assets and liabilities, with further breakdown into equity and debt portfolio investment. Until 1997 only data on sales and purchases of debt securities through banks were included in this item. Since February 1997 the equity securities with the exception of direct investment are included in this item too. With the new Foreign Exchange Act in 1999, portfolio investment transactions include all transactions below the 10% rule. Equity portfolio investment to individual sectors is subdivided into mutual funds and other investment. VRP and KDD data are the main sources from 2004 onwards. Since 2007 on this item includes also assets of debt portfolio instruments held by Bank of Slovenia, which are no longer considered as international reserves, but as claims to EMU member states and claims in EUR currency to all other nonresidents. From 2007 onwards data on transactions in assets of foreign debt instruments that occur without involvement of domestic dealers are collected on a report DVP, and from 2008 onwards assets and liabilities in portfolio equity investments deriving from transactions without involvement of domestic dealers are collected on report SN.

Financial derivatives

From 2004 until 2006 these types of transactions are included in VRP and KDD sources. Since 2007 quarterly data on financial account's statistics are source for financial derivatives for all sectors except the central bank. From 2009 onwards financial derivatives of Bank of Slovenia are included in other investment/financial derivatives item or international monetary reserves item (depending on the residency of the counterpart).

Other investments

Short-term trade credits

Until 2002, short-term trade credits were estimated based on the following calculation:

- {[export of goods FOB + coverage adjustments - (export payments + free export of goods + direct investments in goods + drawings of granted long-term trade credits)]}
- {[import of goods FOB + coverage adjustments - (import payments + free import of goods + direct investments in goods + drawings of received long-term trade credits)]}

Since 2002, short-term commercial credits and advances are included based on SKV reports. Short-term trade credits between affiliated companies are included in direct investments.

Loans and long-term trade credits

From 2001 onwards, inter-company debt transactions between affiliated enterprises (10% or more capital share) are not recorded as loans, but are recorded as direct investment - other capital transactions. Loans (including long-term trade credits) and related income have been calculated according to the accrual principle from 2002 onwards, and according to the cash principle prior to 2002. From 2005 onwards claims/liabilities of banking sector regardless of capital affiliation to nonresidents are included in this item (the direct investment relationships are not distinguished in the data source).

Currency and deposits

Until the adoption of Euro currency (1.1.2007) the foreign currency of residents is estimated based on the following formula: deposited currency and cheques on foreign currency accounts of individuals - withdrawals of cash and cheques from foreign currency accounts of individuals + the estimated net purchase of foreign currency by residents + estimated expenditures for tourist travel abroad + estimated expenditures of tourist travel to the former Yugoslavia + the estimated purchase of goods abroad - estimated labour expenditures abroad - estimated Italian pensions (until the end of 1998) + net withdrawals from non-resident accounts in local currency + the change of deposit balances of residents on accounts at BIS Member State banks (before 2002).

From the adoption of Euro currency (1.1.2007) onwards item foreign currency of households is estimated by using data on net inflows of foreign currency from tourism, data on net income on compensation of employees (decreased by consumption abroad/in the economy) and BIS (Bank for International Settlements) data on deposits held by residents with the banks abroad.

Since 2002, the category "Accounts Abroad of Other Sectors" also includes BIS data regarding deposits of residents on accounts at BIS Member State banks.

With adoption of EUR in 2007 as a national currency Slovenia became a member of EMU which affects the following changes in currency and deposits item;

- the item currency and deposits/ claims includes also estimated counterpart of the transactions in cash in current account of the balance of payments (tourism and labour income),
- claims of the Bank of Slovenia to EMU member states and all claims in EUR currency to all other states are included in the item currency and deposits/ claims.
- net position of the Bank of Slovenia to the Eurosystem (net result of incoming and outgoing payments conducted in EUR currency through TARGET and STEP2 system) is included in the item currency and deposits/ other liabilities.

International monetary reserves

Reserve assets and related income have been calculated according to the accrual principle from 2002 onwards, and according to the cash principle prior to 2002.

Following Slovenia's entry to the EMU in 2007, claims to other residents of the euro area (denominated in euros and in other currencies) and claims in euros to EMU non-residents are not included in reserve holdings. From 2007 onwards, these transactions are shown in the appropriate categories of the capital and financial account sector of the Bank of Slovenia

(investments in securities and other investments).
International monetary reserves item includes also financial derivatives (from 2009 onwards).

Table 3.1: Balance of Payments 1988–1993

The balance of payments is based on the methodology of the International Monetary Fund (Balance of Payments Manual, IMF, 1993). The balance of payments for the period 1998 - 1991 does not include transactions with republics of the former Yugoslavia. The import and export of goods is shown without processing transactions, processing is included in services.

Note 1: For 1988 and 1989, official sector data is included in "Other sectors".

Note 2: For 1988 through 1990, "Statistical errors" include sales of claims from bilateral agreements to the former National Bank of Yugoslavia and its purchases of foreign currency through Slovenian foreign currency exchange offices.

Note 3: Reserve assets of the Bank of Slovenia.

Table 3.2: Balance of Payments

The data for the current year are revised monthly. Data become final according to the revision practice (see revision practice).

In June 2001, Slovenia acquired a 16.39% share in the holdings of the former Yugoslavia with the Bank for International Settlements (BIS), consisting of gold SIT 16.9 mio (EUR 77.8 million), foreign currencies SIT 1.1 mio SIT (EUR 5.3 million) and shares SIT 3.0 mio (EUR 13.8 million). This transaction is not considered to be a flow of the balance of payments, but rather a part of the "Other changes" category, which reconciles the international investment position in consecutive periods.

* Years 1994 in 1995: Data for balance of payments in ECU for years 1994 and 1995 are not obtained in the same manner as data for other years. The data for merchandise trade are converted from US dollar to ECU using average monthly exchange rates. The data for merchandise trade in Euros or ECU since 1996 are computed from values in original currencies using daily exchange rates for Euro or ECU.

Note 1: Exports and imports of goods - f.o.b. parity

Note 2: June 1996: Includes the issue of government bonds in exchange for a part of allocated foreign debt in the amount of SIT 63.7 mio (EUR 374.9 million). Banks' liabilities under foreign loans are decreased for the same amount and transferred to "Liabilities to government".

Note 3: Issues of eurobonds:

- August 1996 (EUR 253.7 million)
- June 1997 (EUR 205.1 million)
- May 1998 (EUR 500.0 million)
- March 1999 (EUR 400.0 million)
- March 2000 (EUR 400.0 million)
- February 2001 (EUR 100.0 million)
- April 2001 (EUR 450.0 million)

Issues of government bonds since 2007:

- March 2007, SLOVEN4 (EUR 1000.0 million)
- February 2008, RS63 (EUR 1000.0 million)
- February 2009, RS64 (EUR 1000.0 million)
- March 2009, RS65 (EUR 1500.0 million)
- September 2009, RS66 (EUR 1500.0 million)
- January 2010, RS67 (EUR 1500.0 million)
- March 2010, RS68 (EUR 1000.0 million)

Note 4: For 1993–2001, short-term claims include net changes in commercial credits (received and granted). From 2002 onwards, short-term commercial credits are included on the basis of SKV reports on the assets and liabilities side of the balance of payments. Short-term commercial credits between affiliated enterprises are included under the heading "Direct investments", while other commercial credits are included in "Other investments/trade credits".

Note 5: Includes mostly Bank of Slovenia fiduciary accounts. In June 1996 the amount of 21.2 mio SIT (EUR 124.9 million) was transferred to regular Bank of Slovenia reserve accounts.

Note 6: Use of IMF credit (assumed upon membership in January 1993).

Note 7: Reserve assets of the Bank of Slovenia. Following Slovenia's entry to the EMU in 2007, claims to other residents of the euro area (denominated in euros and other currencies) and claims in euros to EMU non-residents are not included in reserve holdings. From 2007 onwards, these transactions are shown in the appropriate categories of the capital and financial account sector of the Bank of Slovenia (investments in securities and other investments). More explanation is available in: "The statistical treatment of the international monetary reserves at the entry of Slovenia to the euro area" (slovenian), in the chapter Methodological information on the internet page: <http://www.bsi.si/en/financial-data.asp?Mapald=64> .

Note 8: The data on reinvested earnings for 2010 are not yet available. Therefore, the balance of payments includes an estimate (from the three year monthly average for the period 2007 to 2009 of actual data on total earnings less extraordinary incomes [the source being annual reports on investments], less dividends and other incomes paid in the current month). In 2011, the estimate will be replaced with actual data on reinvestment of earnings; the estimate for 2011 shall take into consideration the new three year average (2008 to 2010).

Note 9: From 2001 onwards, there is a time series break in the categories "Direct investment" and "Loans". From 2001, inter-company debt transactions between affiliated enterprises (10% or more capital share) are included in the "Direct investment" category; before that they were included under the heading "Loans". Since 2002, the category "Direct investments" also includes short-term trade credits between affiliated enterprises.

Note 10: Transfers from the EU budget since 2004 have been recorded as either current or capital transfers, according to the nature of their use. Data are provided by the Ministry of Finance.

Note 11: In the balance of payment of Slovenia to the EMU the presentation of the category net of errors and omissions does not make sense.

Tables 3.3 and 3.4: Current account and capital and financial account by countries

The tables show the main categories of current and capital and financial account of the balance of payments, by countries, for the last available year. The most important countries and/or groups of countries are shown.

Table 3.5.: Trade in goods by countries

The data source is the Statistical Office of the Republic of Slovenia (external trade statistics). Import is valued at FOB parity; export is valued at CIF parity.

International Investment Position of Slovenia

General notes

The international investment position is the balance sheet of the stock of external financial assets and liabilities. The financial items that constitute the position consist of claims on non-residents, liabilities to non-residents, monetary gold and SDRs.

The methodology of the international investment position (IIP) of Slovenia is based on the fifth edition of the Balance of Payments Manual, IMF, 1993. The manual distinguishes four sectors – monetary authorities, general government, banks and other sectors.

The structure of the statement is similar to the balance of payments (financial account): here as well are holdings and liabilities, first classified by instruments, followed by sectors and finally by maturity. The change to the balance of holdings and liabilities in a specific period is the result of transactions or flows shown in the balance of payments and also exchange rate changes, price changes and other changes.

Revision policy

See note "Revision policy" in the section "Balance of Payments".

Data sources

Data sources for the international investment position of Slovenia are mainly the same as those for the financial account of the balance of payments.

Direct investment

Data on direct investment are collected from:

- concessional surveys on equity investment (SN),
- reports on loans granted to or received from non-residents (KR) - until 2006,
- reports on accounts abroad (C) - until 2006,
- short-term commercial credits with non-residents (SKV), and
- assets and liabilities in loans and deposits to nonresidents (KRD) for non-bank sectors since 2007.

In accordance with the recommendations of the IMF, this item comprises investment where the direct investor owns 10% or more of ordinary shares or voting power. Equity shares are until 2006 valued at book value according to accounting standards. From 2007 the equity of listed companies is recorded according to market value and equity of unlisted companies is recorded according to book value in line with accounting standards. Reinvested earnings are included. Data of Surveying and Mapping Authority of the Republic of Slovenia on nonresidents' investments in real-estate in Slovenia are included from 2008 onwards.

Claims on and liabilities to affiliated enterprises are included in the category "Direct investment-other capital". Intercompany claims or liabilities between affiliated banks and affiliated financial intermediaries recorded under direct investment capital are limited to those associated with permanent debt (loan capital representing a permanent interest). Until 2000, all long-term intercompany claims were considered liabilities between affiliated banks, and affiliated financial intermediaries were included in this item as well as permanent debt. From 2005 onwards other capital item of direct investment does not include claims/liabilities of banking sector to affiliated enterprises (those data are included in item other investment/ loans).

Data on claims and liabilities of Slovene enterprises in indirectly-affiliated enterprises from 1996 onwards are included in the category "Direct investment abroad" (in cases where an enterprise abroad having Slovene direct investment holds 10% or more equity in another foreign enterprise). In the category "Direct investment in Slovenia", data on the investment of foreign enterprises in indirectly-affiliated enterprises in Slovenia are included (in the case that a Slovene enterprise with foreign direct investment holds 10% or more equity in another Slovene enterprise). From 2007 all claims and liabilities to foreign direct investors/ direct investment enterprise and fellow companies that belong to the same foreign direct investor / direct investment enterprise are included.

Portfolio investment

Until 2002, data on equity securities and other equity shares were available from enterprises' surveys (form SN), but only data from surveys where the direct investor owns less than 10% of ordinary shares or voting power are included. (In the balance of payments, transactions with equity securities and other shares are collected from the ITRS [see note to tables 3.1–3.4] /Capital and financial account/Portofolio investment.) From 2007 data on equity shares below 10% that are traded without involvement of domestic dealers are collected (report SN).

From 2003 onwards, data from the reports VRP (operations in securities reported by brokerage houses, banks and investment companies) and KDD (Central Securities Clearing Corporation) are included. Also data on investments in mutual funds and investments of households in other equity securities are available since 2003. From 2007 data on assets of foreign debt securities that are traded without involvement of domestic dealers are collected (report DVP).

Data on residents' holdings of debt securities are available from VRP direct reports.

Liabilities of debt securities of the government, banking and other sectors are available from credit registration and Central Securities Clearing Corporation data (KDD). For domestic securities issued abroad, the source is VRP reports.

Financial derivatives

From 2004 until 2006 these data are included in VRP and KDD sources. Since 2007 quarterly data on financial account's statistics are source for financial derivatives for all sectors except the central bank. From 2009 onwards financial derivatives of Bank of Slovenia are included in other investment/financial derivatives item or international monetary reserves item (depending on the residency of the counterpart).

Trade credits and loans

The source for short-term trade credits is a report of enterprises on the stock of external assets and liabilities (form SKV).

Until 2006 sources for long-term trade credits and loans are credit registration forms (forms KR) and from 2007 onwards statistical reports on assets and liabilities in loans and deposits to nonresidents for non-bank sectors (forms KRD) and are the same for the international investment position and the balance of payments. Until 2000, the balance of payments did not distinguish loans between affiliated companies from loans between unaffiliated companies and included all loans in other investment items.

From 2005 onwards monetary statistics (PORFI) is the source for banking sector data (claims and liabilities are included regardless of direct investment affiliation).

Currency and deposits, other assets, other liabilities and reserve assets

For these categories, the sources largely coincide with the sources for the balance of payments:

- the accounting data of commercial banks (KNB) - until 2004,
- the account balances of banks in original currencies (PPV) - until 2004,
- the account balances abroad of companies (C) - until 2006,
- assets and liabilities in loans and deposits to nonresidents (KRD) for non-bank sectors since 2007
- the source for banking sector data (PORFI) - since 2005,
- the accounts of the Bank of Slovenia.

In the International Investment Position, mature, unpaid loans and long-term commercial credits are included in other holdings and liabilities as short-term items. These transactions are not included in the balance of payments.

Until 2002, there is a difference between the International Investment Position and the balance of payments for other liabilities and holdings of other sectors, where contractual joint ventures are shown in the investment position. The source for this item is a JV report.

The International Investment Position includes data of the Bank for International Settlements (BIS) on deposits of local residents at BIS Member State banks. Since 2001, an estimate of the balance of foreign currency held by households is also included. However, any further investments of foreign currencies (primarily investments in real estate abroad and foreign securities, without domestic brokers) are not excluded from this estimate, since data of this type are not available.

Net position of the Bank of Slovenia to the Eurosystem (net result of incoming and outgoing payments conducted in EUR currency through TARGET and STEP2 system) is also included in the item liabilities/currency and deposits.

Table 3.6: International Investment Position of Slovenia

IIP data do not include:

- data on real estate owned by Slovenian households abroad (mainly real estate in Croatia); from 2001 onwards, these data are partially included under the heading "Assets/other investment/currency and deposits/households"; and
- claims on other countries in the territory of the former Socialist Federal Republic of Yugoslavia, subject to negotiations on succession (except the part reported by the Fund of the Republic of Slovenia for Succession from 2001 onwards),

expropriated assets in these territories and other assets transferred to the Slovenian government during the process of privatization. In December 2006 claims subject to succession to former Yugoslavia were revalued and 'Sklad RS za sukcesijo' was transformed into 'Javna Agencija Republike Slovenije za nasledstvo'.

Additional data on direct investment are available in a special publication of the Bank of Slovenia: "Neposredne naložbe – Direct Investment", and on the Bank of Slovenia Web site: http://www.bsi.si/iskalniki/ecb_en.asp?Mapald=714.

Table 3.7: International Investment Position by countries

The table includes data for the last available year by countries in which Slovenes invest (in holdings) and includes data from which countries foreigners invest in Slovenia (in liabilities). The most important countries and/or groups of countries are shown.

Gross External Debt

General notes

The methodology is based on External Debt Statistics: Guide for Compilers and Users, IMF, 2003. The guide is available at the following Web address: <http://www.imf.org/external/pubs/ft/eds/Eng/Guide/index.htm>.

Revision policy

See note "Revision policy" in the section "Balance of Payments".

Data sources

In order to maintain consistency, the data sources are the same as those for the International Investment Position. The sources for equities and financial derivatives are not used because these types of instruments are not included in the balance of external debt according to the IMF definition.

Tables 3.8 and 3.9: Net External Debt

The tables present gross external debt, gross external assets in debt instruments, and net debt position. The data are the same as presented in the international investment position (IIP). In the table "Net External Debt", data are sorted by sectors, maturities and instruments; in the table "International Investment Position", data are sorted by instrument, sectors and maturities.

Tables 3.10 and 3.11: Gross External Debt

Gross external debt, at any given date, is the outstanding amount of those current, and not contingent, liabilities that require payment(s) of principal and/or interest by the debtor at some point(s) in the future and are owed to non-residents by residents of an economy. The types of financial instruments included in the presentation of the gross external debt position are as follows: debt securities (money market instruments, bonds and notes), trade credits (short- and long-term), loans (short- and long-term), cash, deposits and other debt liabilities. Maturity of debt liabilities is based on the formal criterion of original maturity. Long-term debt is defined as debt with an original maturity of more than one year or with no maturity stated. Short-term debt, which includes cash, is debt repayable at notice or with an original maturity of one year or less.

International reserves

Table 3.12.: International reserves

Until December 2006, the Bank of Slovenia's foreign exchange reserves included convertible foreign currencies, deposits abroad and first-class securities of foreign issuers.

From 1 January 2007, the Bank of Slovenia's foreign exchange reserves include convertible foreign currencies, deposits in foreign currencies outside the euro area and first-class securities in foreign currencies of issuers outside the euro area. The decline of value presented in the data is due to Slovenia's inclusion in the EMU.

Since 2009 foreign exchange reserves of the Bank of Slovenia include also positions on financial derivatives based on daily pricing of these instruments. The value of financial derivatives may also be negative.

4. PUBLIC FINANCE

General

Data prior to 2007 are published in tolar; from 2007, data are published in euros. Quarterly and yearly data on Gross domestic product are not yet reconciled.

General - methodology ESA 95

Non-financial and financial data are prepared in compliance with the European System of Accounts from the year 1995 (ESA 95). This methodology was adopted by Council Regulation (EC) No. 2223/96 of 25 June on the European System of Accounts in the Community.

ESA 95 methodology is the central economic methodology of each EU member state and therefore ensures comparability of data.

Data on non-financial accounts of general government are prepared by the Statistical Office of the Republic of Slovenia. In accordance with a memorandum of understanding between the Ministry of Finance, the Bank of Slovenia and the Statistical Office of the Republic of Slovenia, the data on financial accounts are compiled by the Bank of Slovenia.

The data on financial accounts are consolidated.

Table 4.1: Non-financial and Financial Accounts (ESA 95) of the General Government sector

EDP debt is gross debt as defined in the Maastricht treaty. It comprises general government liabilities in the form of currency (coins), deposits, debt securities (securities other than shares and other equity) and loans only.

Tables 4.2 and 4.3: Non-financial Account of the General Government sector

Fiscal burden is a sum of the direct taxes, indirect taxes, social contributions and capital taxes.

Intermediate consumption consists of the value of the goods and services consumed as inputs by a process of production. The goods and services may be either transformed or used up by the production process.

Tables 4.4 and 4.5: Financial Account of the General Government sector

Change in EDP debt is a difference between the current and preceding EDP debt figure.

Deficit-debt adjustment (DDA) is a sum of the deficit/surplus of non-financial account and change in EDP debt. DDA can be also calculated as a sum of the difference between financial assets and liabilities (which are not included in EDP debt) and other flows.

Other liabilities consist of data, which are not included in the EDP debt: financial derivatives, shares and other equity, insurance technical reserves and other liabilities.

Other flows are sum of the statistical discrepancy (difference between deficit/surplus of non-financial and financial account) and changes of the debt which are not transactions (foreign exchange holding gains and losses, other valuation effects, other changes in volume of debt).

Borrowing requirement consists of a negative deficit/surplus of financial account plus financial assets minus financial liabilities.

Table 4.6: Revenues and Expenditures of the General Government

Note 1: The data of the current and previous year are revised monthly until the data on the previous year become final.

Note 2: Total revenue excludes receipts from the EU, and likewise, total expenditure excludes payments to the EU budget.

Note 3: Current expenditure also includes social security contributions (besides of the expenditures on goods and services, interest payments, current reserves and current transfers).

Tables 4.7: Lending, Repayments and Financing of the General Government

General government operations (consolidated state budget, local governments, pension fund and health insurance fund).

Note 1: The data of the current and previous year are revised monthly until the data on the previous year become final.

Table 4.8: Central budget debt

The Republic of Slovenia is defined as a legal person. The data from tables 4.6., 4.7. and 4.8. originate in the Bulletin of Government Finance published by the Ministry of Finance.

The obligation of the Central budget of Republic of Slovenia to Bank of Slovenia is due to settlement of the Special drawing rights of the International monetary fund by Bank of Slovenia as a fiscal agent, in line with the agreement between the Ministry of finance of Republic of Slovenia and Bank of Slovenia.

5. FINANCIAL ACCOUNTS

Financial accounts (Tables 5.1 to 5.6)

Tables 5.1, 5.2, 5.4 and 5.5 show stocks and transactions in financial assets and liabilities held by individual institutional sectors, by individual financial instruments. The basis for the financial accounts methodology is ESA95.

Tables 5.3 and 5.6 present net items by individual sectors.

Net financial assets present difference between financial assets and liabilities (stocks).

Net financial transactions present difference between transactions in financial assets and transactions in liabilities.

The general principle for stocks and transactions is valuation at the current market price. As a rule accrued interest is included in the instrument to which it relates (deposits, loans, securities).

The transactions represent the difference between increases (acquisitions) and decreases (disposals) or the net turnover in an individual financial instrument. Changes in market prices and exchange rates, and other changes (reallocations of financial instruments/sectors, changes in methodology, write-downs of claims/debts, etc.) are excluded from the transactions.

Sectors, according to SKIS, are used.

Financial instruments in financial accounts

Individual financial instruments are the same among assets and liabilities, except Monetary gold and SDRs which only appear in financial asset tables.

Monetary gold and SDRs represent financial assets of the central bank. No other institutional unit or sector shall show a liability from the above mentioned instruments.

Currency and deposits consists of three sub-categories of financial instruments:

- currency represents bank notes and coins normally used for payments and includes bank notes and coins in circulation and represents the liability of the unit which issued them (as a rule, the central bank). The category "Household Currency and NIPSH (non-profit institutions serving households)" includes the foreign currency of residents which is estimated based on net purchases.
- transferable deposits consist of sight deposits in domestic or foreign currency. Transferable deposits can be converted into currency or transferred by cheque, payment order, debit entry or the like, without significant restrictions or additional costs.
- other deposits consist of deposits that cannot be used to make payments at any time and are not convertible into currency or transferable deposits without significant restrictions or additional costs.

Securities, excluding shares, are comprised of the following:

- short-term debt securities (with an original maturity of up to one year bills and other short-term debt securities);
- long-term debt securities (with an original maturity of more than one year: bonds);
- financial derivatives (options, swaps, standardised futures, interest rate futures and warrants).

Loans consist of all types of loans created when creditors lend funds to debtors, either directly or through brokers, that are either evidenced by non-negotiable documents or not evidenced by documents. The initiative concerning a loan normally lies with the borrower. Loans also include loans for financing trade credits, financial leasing, repurchase agreements, and repayable margin payments related to financial instruments when these agreements and payments are liabilities of corporations that are not monetary financial institutions. Loans do not include trade credits or advances.

Loans are broken down into short-term loans (with an original maturity of up to one year) and long-term loans (with an original maturity of more than one year).

Shares and other equities represent:

- Shares which are quoted (on a domestic or foreign market);
- Unquoted shares;
- Other equities;
- Shares/units of investment funds.

Shares/units of investment funds include shares of investment companies, investment coupons (referring to one or more units of mutual funds) and units of pension funds.

Insurance technical reserves comprise the insurance technical reserves of insurance corporations and pension funds against policyholders and beneficiaries, and are divided into three sub-categories of financial instruments.

Net equity of households in life insurance reserves including:

- net life insurance provisions;
- net provisions for life insurance policies where the investment risk is borne by the policyholders;
- net health insurance provisions.

Net equity of households in pension fund reserves consists of provisions deriving from pensions.

Prepayments of insurance premiums and reserves for outstanding claims represent net prepayments of insurance policies, net reserves for outstanding claims and other net insurance technical reserves.

Other assets and liabilities are broken down as follows:

- Commercial credits and advances;
- Other (other assets and liabilities, excluding commercial credits and advances).

Commercial credits and advances consist of financial claims or liabilities arising from the direct extension of credit by suppliers or buyers for goods and services transactions, and advance payments for work that is in progress or to be undertaken and associated with such transactions.

Other (other assets and liabilities excluding commercial credits and advances) consists of all other claims and liabilities arising from timing differences between transactions and payments made in respect of taxes, social contributions, wages, rents, dividends, interest and transactions in financial assets on the secondary market. As a rule, accrued interest is included in the instrument to which it relates. However, should it be impossible to include the interest in the relevant instrument, it is disclosed in the category "Other".

Financial accounts data may differ from other statistical data because of:

- valuation method (current market value),
- data sources,
- time of data recording,
- time of data revision,
- methodological differences in financial instrument classification and
- other methodological differences.

Data for the period before the 1st of January 2007 are converted into EUR based on exchange rate 1 EUR = 239,64 SIT.

6. NON-FINANCIAL ACCOUNTS AND GENERAL ECONOMIC STATISTICS

General notes

The Standard Classification of Activities is defined by the Decree on the Introduction and Use of the Standard Classification of Activities (Official Gazette of the Republic of Slovenia, No. 69/2007, 17/2008) and is in line with the classification of activities NACE Rev.2 (Nomenclature statistique des activités économiques dans la Communauté européenne) as a compulsory statistical standard of the European Union, which is directly connected to the international classification of the activities of United Nations ISIC Rev. 4 (International Standard Industrial Classification).

The basic activities of an economy are:

- A Agriculture, forestry and fishing
- B Mining and quarrying
- C Manufacturing
- D Electricity, gas steam and air conditioning supply
- E Water supply, sewerage, waste management and remediation activities
- F Construction
- G Wholesale and retail trade; repair of motor vehicles and motorcycles
- H Transportation and storage
- I Accommodation and food service
- J Information and communication
- K Financial and insurance activities
- L Real estate activities
- M Professional, scientific and technical activities
- N Administrative and support service activities
- O Public administration and defence, compulsory social security
- P Education
- Q Human health and social work activities
- R Arts, entertainment and recreation
- S Other service activities
- T Activities of private households as employers, undifferentiated goods- and services- production activities of households for own use
- U Activities of extraterritorial organizations and bodies

Methodological notes and a detailed classification for the real sector are published on the Statistical Office's Web site:

http://www.stat.si/skd_nace_2008.asp (in Slovene).

General

Data prior to 2007 are published in tolar; from 2007, data are published in euros.

Non-financial accounts and general economic statistics

Tables 6.1 and 6.2: Expenditure of Gross Domestic Product

Real yearly growth rates are calculated from the GDP data in constant prices, reference year 2005.

Tables 6.3 and 6.4: Gross Domestic Product by Activity

Real yearly growth rates are calculated from the GDP data in constant prices, reference year 2005.

Tables 6.5 and 6.6: Industrial Production Index

For the period from January 1992 to January 2004, industrial production indices are calculated from quantitative data on the production of industrial products.

From February 2004 onwards, the basis for calculating the production indices are data on the value of production.

Tables 6.7 and 6.8: Turnover and New Orders in Industry

Data for the year 2010 are provisional.

For the period from January 1998 to January 2003, indices on turnover are estimated on the basis of the monthly data on the quantity of sold industrial products and the average annual prices of industrial products. Data from February 2003 onwards are gathered with the regular monthly survey on turnover, new orders and value of stocks in industry.

Real yearly growth rates are calculated from the real index on turnover and new orders in industry. The deflator is the industrial producer prices index.

Tables 6.9 and 6.10: Business Tendency and Consumer Surveys

The sentiment indicator is the weighted average of the confidence indicator in manufacturing and retail trade, plus the consumer confidence indicator. Sentiment indicators of certain activities or consumers are calculated from answers shown in the table.

The results are shown as a balance by individual questions. The balance is the difference between positive and negative answers, expressed as percentages. The balance shows the movement of the observed economic indicator (present situation or future expectations), and not the real size of economic indicators.

Table 6.11: Employment by Labour Force Survey (ILO)

The Slovene Labour Force Survey was carried out in compliance with International Labour Organisation (ILO) guidelines for labour force statistics and with Eurostat requirements. This enables the comparability of our data to the data of other countries.

Data in column 5 – self-employed persons include family-member assistants as well.

Note 1: From 2008 onwards the revised classification of activities SKD 2008 is used, which is internationally comparable with the NACE Rev. 2 classification of activities.

Table 6.12: Unemployment by Labour Force Survey (ILO)

The Slovene Labour Force Survey was carried out in compliance with International Labour Organisation (ILO) guidelines for labour force statistics and with Eurostat requirements. This enables the comparability of our data to the data of other countries.

Table 6.13: Average Wages and Salaries

Real wages and salaries are deflated by the consumer price index (CPI).

From January 2005 onwards a new methodology for the calculations of average monthly wages and salaries has been used. The statistical survey also includes legal entities with one or two persons in paid employment in the private sector. Individual private entrepreneurs and persons employed by them, own account workers and farmers are not covered.

Published data are the results of new research: the Monthly Report on Earnings at Legal Entities. Data are collected by the Agency of the Republic of Slovenia for Public Legal Records and Related Services (with the common questionnaire (Form 1-ZAP/M)). Statistical work was done by SORS. SORS also calculated the average monthly wages and salaries data for 2004 according to the new methodology.

Table 6.14 Nominal effective exchange rate and Real harmonised competitiveness indicators

Nominal effective exchange rate, Euro area-17 countries vis-a-vis the EER-40 group of trading partners (AU, CA, DK, HK, JP, NO, SG, KR, SE, CH, GB, US, BG, CZ, LV, LT, HU, PL, RO, CN, DZ, AR, BR, CL, HR, IS, IN, ID, IL, MY, MX, MA, NZ, PH, RU, ZA, TW, TH, TR, VE); Currency denominator: Euro.

Real harmonised competitiveness indicators consumer prices, industrial producer prices and unit labour costs in total economy deflated; ECB EER-20 group of currencies and Euro area 17 country currencies (FR, BE, LU, NL, DE, IT, IE, PT, ES, FI, AT, GR, SI, AU, CA, CN, DK, HK, JP, NO, SG, KR, SE, CH, GB, US, CY, CZ, EE, HU, LV, LT, MT, PL, SK, BG, RO); Currency denominator: until 31.12.2006 Slovenian tolar, from 01.01.2007 Euro.

The growth of the index value represents decrease of competitiveness.

Note 1: Data for harmonised competitiveness indicators unit labour costs in total economy deflated are quarterly.

Explanations to harmonised competitiveness indicators calculations are available in special methodological paper "Calculations of harmonised competitiveness indicators", on the Web site of Bank of Slovenia:
<http://www.bsi.si/publikacije-in-raziskave.asp?MapaId=1039>.

Tables 6.15 and 6.16: Consumer Price Index

The Harmonized Index of Consumer Prices (HICP) is a comparable index of consumer prices produced by each Member State and used for international comparison of consumer price inflation. In Slovenia it is available from the year 2001 onwards.

Tables 6.17 and 6.18: Industrial Producer Price Index

The index of industrial producer prices measures changes in the level of producer prices of industrial products that are sold by producers on the Slovenian market. The tables show the price indices and growth rates by end-use of products, as well as by main divisions of activities, v2 (2008).

Review of the links between the data on Slovenia in the Bulletin of the Bank of Slovenia and the Euro area data in the ECB's Bulletin

The table below shows the correspondence between the statistical tables on Slovenia in the Bulletin of the Bank of Slovenia and on the Euro area in the ECB's Bulletin, i.e. where are the data on Slovenia included into the Euro area aggregates. The ECB's Bulletin is available on the internet address: <http://www.ecb.int/pub/mb/html/index.en.html>.

Tables in Monthly Bulletin of the Bank of Slovenia	Tables in Monthly Bulletin of the ECB
1.1. Monetary aggregates	2.3 Monetary statistics (Monetary aggregates and counterparts)
1.2. Consolidated Balance Sheet of Monetary Financial Institutions	2.2 Consolidated balance sheet of euro area MFI s
