Important information

Monthly Bulletin of Bank of Slovenia has been, from the number 2-3 for February-March 2007, volume 16, partly changed in its content and form.

The preannouncement of the change has been published on the web page of the Bank of Slovenia in January 2007.

The main changes are as follows:

- The beginning of publishing the statistical data of value, which refer to the period after the entry to the euro area, in the official domestic currency - euro. The data of value for the previous period will continue to be published in tolar, as the official Slovenian currency in that period. The data in euros are in the tables separated from the data in tolar by line.
- The change in the concept of the international monetary reserves because of the entry to the Economic and monetary union. Among the Slovenian international monetary reserves after the entry to the euro area, compared to the period before, there are no longer assets in euro as well as the claims on the euro area residents. More explanation is available in: "The statistical treatment of the international monetary reserves at the entry of Slovenia to the euro area" (slovenian), in the chapter Methodological information on the internet page: <http://www.bsi.si/en/financial-data.asp?Mapald=64>.
- The change in the presentation of the currency in the circulation to the standards of the euro area.
- The accommodation of the balance sheet of Bank of Slovenia to its activities in the framework of the Eurosystem.
- The beginning of the publishing of the interest rates of the euro area money market as well as the publishing of the whole set of the interest rates of the Monetary financial institutions according to the ECB's methodology.
- The beginning of the publishing of the financial accounts statistics in the new chapter.
- Colour separation of the individual statistical chapters, to alleviate search and because of the link of the chapters to the specialised publications.

More information can be found in Methodological Notes in the Bank of Slovenia monthly Bulletin.

The entry to the euro area (on 1.1.2007) caused a break in the time series of the statistical tables in the Monthly bulletin in cases where the "currency" is an attribute. An expected reclassification takes place, for example of the stock of outstanding loans in euros from the time series of "foreign currency" before the introduction to the time series of "domestic currency" after the introduction of euro. To enable easier reconstruction of this change, the shares of the Euro amounts in stocks of the foreign currency in the tables 1.3, 1.4, 1.5 and 1.6 on 31.12.2004, 31.12.2005 and 31.12.2006 are published in the chapter Methodological notes.

Economic growth slowed in the euro area in the second quarter, and remained low in the US. Quarterly economic growth in the euro area slowed from 0.8% to 0.2%, primarily as a result of lower economic growth in Germany and France. Consensus lowered its economic growth forecast for the euro area for this year and next year to below 2%, and there is a great likelihood of further downward revisions. Economic growth in the US remained low in the second quarter at 0.2%, primarily as a result of weak final household consumption. In light of this Consensus revised its economic growth forecast for the US sharply downwards, to 1.8%. In addition to the uncertainty surrounding future economic growth, doubts around the sustainability and feasibility of fiscal consolidation in the euro area and the US remain. Interest rates on government bonds in certain euro area countries have risen in recent months.

As the crisis in domestic demand deepened and growth in foreign orders slowed, economic activity continued to stagnate in Slovenia in the second quarter. Quarterly growth in GDP stood at 0.1% for the second consecutive quarter, while in the first half of the year it was 0.8 percentage points below that of the euro area average. In the breakdown of domestic demand there was again a sharp year-on-year contraction in gross fixed capital formation, while household consumption stagnated as purchasing power declined. Final government consumption also remained unchanged. The breakdown of growth in value-added in the second quarter reveals increased dependence on foreign demand. The largest contribution to growth came from manufacturing industry, where year-on-year growth is slowing. At the same time the crisis in the construction sector is deepening further, and remains the main drag on economic growth. Growth in foreign trade slowed, and the decline was greater on the import side than on the export side as a result of the contraction in domestic demand.

The number of registered unemployed fell in July, in line with the usual seasonal trend, but the seasonally adjusted surveyed unemployment rate is nevertheless still rising, reaching 8.4% in June. Year-on-year growth in the number of registered unemployed remains elevated, albeit stable. In the private sector, the year-on-year decline in the workforce in employment stood at 1.7% in June, slightly less than in the early part of the year. The workforce in employment in the public sector is continuing to record moderate growth as a result of employment in health and education. The average gross wage in June was up 2% in year-on-year terms, although the growth rate is slowing. In June, the nominal wage bill remained unchanged in year-on-year terms.

Year-on-year inflation as measured by the HICP was up 0.1 percentage points in August at 1.2%, primarily as a result of a rise in energy prices. Core inflation fell, as the low level of final household consumption continued to curb a rise in prices. There was again a sharp decline in year-on-year growth in prices of non-energy industrial goods, to which prices of clothing and footwear made the largest contribution.

The current account deficit in the 12 months to June amounted to EUR 107 million or 0.3% of GDP, compared with 1.1% of GDP a year earlier. Foreign trade slowed in the second quarter, more on the import side than on the export side, and the decline in the current account deficit accelerated. In June, this year's current account position moved from deficit to surplus. Alongside the increase in the surplus of trade in services, the main factor in the cumulative surplus in the first six months of the year was net current transfers. By contrast, the deficit in capital income widened as a result of an increase in net interest payments to the rest of the world and net payments from investments in securities. The private sector's net financial outflows amounted to EUR 1.8 billion in the first six months of the year, up almost EUR 0.9 billion on the same period last year. The net external debt declined by EUR 157 million in the first half of the year, primarily as a result of an increase in residents' holdings of short-term deposits and currency in the rest of the world.

Growth in general government revenues during the first six months of the year was relatively favourable, and outpaced growth in general government expenditure. According to Ministry of Finance assessments, this year's state budget revenues are nevertheless expected to be lower than anticipated in the adopted budget, which has led to the drafting of a proposed revision to this year's state budget. This is also required by the reallocation of budget expenditure, particularly in the direction of an increase in social transfers because of a rise in the number of claimants. According to the revision, projected budget deficit remains unchanged at 4.6% of GDP, and parliament is expected to approve the revision in September. As the debt crisis in certain euro area countries worsened, the premiums on Slovenian government bonds also rose during the summer months.

After declining by EUR 183 million in June, the banking system's total assets increased by EUR 253 million in July. The main factors in June's decline were a decline in liabilities on the basis of issued debt securities and a decline in liabilities to foreign banks. July's increase in the banking system's total assets was the result of an increase in liabilities to foreign banks. On the investment side the stock of loans to non-banking sectors declined in June and July, primarily as a result of a decline in corporate loans, while lending to households continued to grow. The banking system generated a pre-tax profit of EUR 48 million during the first seven months of the year.

The market capitalisation of bonds on the Ljubljana Stock Exchange rose by 0.2% in June, but fell by 0.3% in July. The market capitalisation of shares on the Ljubljana Stock Exchange fell by 2.8% in June, and by 0.6% in July. The proportion of the market capitalisation of shares on the Ljubljana Stock Exchange accounted for by non-residents fluctuated around 12% in June and July. The SBI TOP stock market index has continued to fall. It fell by 3.9% in June, and by 2% in July, ending the month at 727. The domestic mutual funds' assets under management declined to EUR 1,982 million in July, as a result of net withdrawals totalling EUR 13.6 million in June and July, and falls in the average unit price of 2% in June and 1.3% in July.

1 | International Environment

Economic growth slowed in the euro area in the second quarter, and remained low in the US. The economic growth forecasts were also lowered. Quarterly economic growth in the euro area slowed from 0.8% to 0.2%, primarily as a result of lower economic growth in Germany and France, while growth in the US remained low at 0.2%, primarily as a result of weak final household consumption. Partly in response to the lower growth in the second quarter, in August Consensus lowered its economic growth forecasts for the euro area for 2011 and 2012. Economic growth is expected to stand at 1.9% this year and 1.5% in 2012, down 0.1 percentage points on the July forecasts. The economic growth forecasts for the US were additionally lowered because of a revision to the figures for past growth, and now stand at 1.8% for this year and 2.4% for next year, down 0.7 and 0.6 percentage points respectively on the July forecasts. Developing countries continue to account for the majority of global economic growth, and their outlook remained relatively good in the second quarter.

The situation in the retail and in the manufacturing sector in the euro area and the US do not indicate

any chance of faster growth in the third quarter, while unemployment is continuing to further restrict growth. Volume turnover in wholesale and retail trade in the euro area in the second quarter was down 0.3% on the previous quarter, and down 0.5% in year-on-year terms. At the same time the PMI for wholesale and retail trade was in the region indicating a contraction in activity for the fourth consecutive month in August. In the second quarter, volume turnover in the retail sector in the US was up 0.2% on the previous quarter, and up 4.3% in year-on-year terms. Industrial production in the euro area and the US was up 0.3% on the first quarter, and was up around 4% in year-on-year terms, although the trend rates of

growth have slowed in recent months. The unemployment rate in the euro area remained unchanged in August at 10.0%. After falling in July as a result of higher employment in the non-farm sector, the unemployment rate in the US remained unchanged in August at 9.1%.

The situation on the financial markets deteriorated in July and the first half of August, which was the largest factor in the decline in the PMI and the confidence indicators. The uncertainty on the financial markets increased again in the third quarter, and was reflected primarily in higher interest rates on Spanish and Italian government bonds, which reached record levels in July and August. The economic sentiment indicator in the euro area declined again in August for the sixth consecutive month, primarily as a result of a decline in retail and services confidence and a decline in consumer confidence. In August it fell below its long-term average. The main factor in August's sharp decline in consumer confidence in the US was weaker expectations. The global PMI continued to indicate an increase in economic activity in July and August, but at sharply reduced rates of growth. At the same time the PMI for the euro area and the US indicates a stagnation of economic growth in the third quarter.

Inflation stood at 2.5% in the euro area in August, and at 3.6% in the US in July. Year-on-year growth in the harmonised index of consumer prices in the euro area stood at 2.5% in July, energy prices recording year-on-year growth of 11.8%. In July, inflation as measured by

the consumer price index stood at 3.6% in the US. The largest year-on-year growth was recorded by energy prices, at 19.0%. Year-on-year core inflation as measured by the HICP excluding energy and unprocessed food stood at 1.5% in the euro area in July, while the CPI excluding energy and food in the US was up 1.8% in July.

Prices of oil and other commodities were down in monthly terms primarily as a result of the slowdown in the global economic activity, but prices of precious metals rose sharply. The price of Brent crude fell in August as a result of weaker economic figures in the euro area and the US. The price of a barrel averaged USD 110.1 during the month, down 5.5% on July. Other commodity prices also fell in monthly terms, although their year-on-year rate of growth was still in excess of 25%. Food prices continue to record the highest growth. Prices of precious metals rose in August, primarily as a result of the uncertainty surrounding the resolution of the fiscal problems in certain euro area countries and the slowdown in the global economic activity. Gold again reached record highs.

The euro appreciated against the US dollar in August. The euro's movement against the US dollar in August was primarily under the influence of the economic growth figures in the euro area and the US, which were slightly worse than expected. The euro rose 0.6% against the US dollar in August, to average USD 1.4343 during the

month. The ECB raised its key interest rate by 0.25 percentage points in July to 1.50%, and kept it at this level in August. The Federal Reserve indicated that it would not change its interest rate until the first half of 2013 at the earliest. As a result of high inflation, which reached 6.5% in July, the Chinese central bank raised its key interest rate by 0.25 percentage points. The Swiss and Japanese central banks intervened on the foreign exchange market in August because of a rise in their currencies.

2 | Economic Activity and Labour Market

Real sector

After the initial release of the national accounts for the second quarter, economic activity continued to stagnate in Slovenia. Quarterly growth in GDP stood at 0.1% for the second consecutive quarter, while economic

growth in the first half of the year was 0.8 percentage points less than the euro area average. Year-on-year growth in GDP was down just under 1 percentage point. With the new release of the national accounts economic growth in the first quarter was cut from 0.3% to 0.1%. In the revision of the national accounts for 2007 to 2010, the pass-through effect of significant changes for 2010 also resulted in year-on-year changes in the movement in domestic consumption and value-added in individual sectors. In the expenditure breakdown the main revisions were made primarily in a year-on-year decline in growth in final household consumption and an increase in the contribution to GDP growth made by net trade and inventories, while the new estimates in the output breakdown reveal a sharp year-on-year increase in value-added in financial and insurance activities and a decline in construction.

The crisis in domestic demand worsened notably in the second quarter, primarily as a result of a renewed pronounced decline in gross fixed capital formation. After recording low year-on-year growth in the first quarter, domestic consumption declined by 2.1% in the second quarter. The contraction in gross fixed capital formation was in excess of 16%, and was primarily a reflection of the deepening crisis in construction. Having been high in the first quarter, growth in investment in machinery and equipment also declined, in line with the slowdown in growth in foreign demand and thus industrial production. The adverse situation on the labour market and the resulting decline in purchasing power are continuing to curb household consumption, which after falling last year stagnated in year-on-year terms in the first half of this year. Government austerity measures meant that final government consumption also remained unchanged in the second quarter. Growth in foreign trade declined in the sec-

Source: SORS, constant prices.

ond quarter, more sharply on the import side as a result of the deepening crisis in domestic demand. Growth in merchandise exports remained above 8% despite a high basis, while growth in imports slowed to just under 4%. The trade surplus thus increased sharply. Its contribution to GDP growth, in conjunction with the continuing renewal of inventories, prevented a slide into recession in the first half of the year.

The movements in value-added deteriorated in all branches of the private sector in the second quarter, and the Slovenian economy's dependence on foreign demand increased further. As a result of a slowdown in growth in foreign orders and the effect of a high basis, year-on-year growth in value-added in manufacturing declined to 5.5%. At the same time the crisis in construction deepened: the decline in value-added reached 24% in the second quarter, which lowered year-on-year economic growth by approximately 1.2 percentage points. The current indicators also suggest that the situation in the sector will remain unfavourable. Despite the slowdown, growth in value-added in financial and insurance activities remained unexpectedly high, the year-on-year rate reaching just under 6% in the second quarter. The high growth of value-added in financial and insurance activities in the last year is in contrast to the banks' performance. Growth also slowed in wholesale and retail

trade, transportation and storage, and accommodation and food service activities. Based on the monthly turnover figures, there was a particular deterioration in the situation in wholesale and retail trade. In conditions where domestic consumption can no longer be encouraged by increasing government spending, and economic growth is extremely dependent on foreign demand, the importance of the cost competitiveness of the economy is increasing further.

After June's negative movements, quarterly growth in industrial production remained relatively low in the

* Volume of industrial production. ** Real value of construction put in place. *** Old methodology.

second quarter. After recording relatively high growth in May, industrial production in June was down 2.7% in monthly terms. In contrast to previous months of this year, a decline was recorded by all categories of products. The most notable decline in June was recorded by production of capital goods, at 6%. Quarterly growth in total production was up 0.3 percentage points on the previous month at 0.8%, but only because of high output in mining. Quarterly growth in activity in manufacturing, which is the sector most dependent on foreign markets, slowed again, to 0.6%. This coincided with a slowdown in growth in foreign trade, and a quarterly decline in imports in some of Slovenia's major trading partners. The disaster in Japan also had an impact at this time, particularly on

the car industry. Year-on-year growth in production is slowing, as a result of declining monthly growth rates and a base effect. Year-on-year growth stood at 4.7% in the second quarter, down 4.9 percentage points on the previous quarter.

Current demand indicators for the third quarter suggest a deteriorating situation in manufacturing industry. The survey indicators of export orders and total orders declined in August for the fourth consecutive month. The real value of new orders in industry was down in monthly terms in June for the second consecutive month. In the second quarter, it was down 1.9% on the previous quarter. In contrast to the previous months of this year, there was a decline in orders for all categories of goods in June. The decline in orders for capital goods was around 5% in June for the second consecutive month. Orders were also down in year-on-year terms for the first time since October 2009, by just over 4%. Considering foreign demand, the movement in the PMI for manufacturing in the euro area has also been unfavourable in recent months. In August it dipped below 50, which marks the border between growth and contraction. According to survey data, capacity utilisation has also declined slightly in the third quarter, in connection with the earlier intense investment in machinery and equipment, alongside the decline in demand.

The crisis in the construction sector deepened further in the second quarter. After declining significantly in May, the volume of construction put in place declined

even more sharply in June. The decline stood at 12% in monthly terms, the highest figure in the last two and a half years. A sharp contraction was recorded by all types of construction, ranging from 7% in civil engineering work to 34% in residential construction. Activity in the second quarter was down 19% on the first quarter, and was down 31% in year-on-year terms, the largest declines since the outbreak of the crisis in both cases. All types of construction recorded a sharp decline in quarterly terms. Here the most noteworthy change was in civil engineering work, where a 1% increase in activity in the first quarter was followed by a 16% contraction in the second quarter. The deepening negative developments in construction were

partly the result of a crisis at another two major construction companies, one of which went into bankruptcy in mid-June, and the other of which has liquidity problems. The failure of major construction companies is having an adverse impact on a larger number of subcontractors.

Judging by numerous indicators, construction activity has not yet reached its low. The number of corporates in the construction sector with unsettled past-due liabilities is still increasing.¹ In July the figure was up over a tenth on the beginning of the year, reaching 23% of the total number of corporates in the category. The proportion of total unsettled past-due liabilities accounted for by construction companies exceeded 34%. This is the highest figure among all sectors in both cases. The number of building permits in the second quarter was up slightly in year-on-year terms, but the corresponding area of the buildings was down 17%. The real value of inventories of construction contracts in the second quarter was down a tenth in year-on-year terms, and was down a quarter on the peak in the first quarter of 2008. The year-on-year contraction was largest in the construction of non-residential buildings, the rate reaching 26%. This could be related in part to the accelerated construction of a major sports and commercial complex in the first half of last year. The year-on-year contraction in residential construction stood at a tenth, while that in civil engineering work stood at 3%. According to SORS figures, prices of new residential properties have continued to move in contrast to construction activity and household purchasing power. In the second quarter they were up just under 3% on the first quarter, and by a tenth in year-on-year terms. At the same time, the number of transactions in new residential properties was down in current terms for the second consecutive quarter.

In the second quarter, volume turnover in the retail sector was down on the first quarter, while turnover in trade in motor vehicles increased. Both branches of trade recorded an increase in turnover in July. Volume turnover in the retail sector in the second quarter was down 1.6%, while the decline in volume turnover in retail other than motor fuels stood at 2.2%. Volume turnover in the retail sector was nevertheless up 0.3% in year

¹ Corporates with unsettled past-due liabilities from court enforcement orders and from tax debts of more than five days uninterrupted excluding other unsettled past-due liabilities from unpaid invoices between creditors and debtors. Source: AJPES.

-on-year terms, but only as a result of an increase in turnover in trade in motor fuels, turnover excluding motor fuels having declined by just over 2%. Volume turnover in the retail sector in July was up 1.7% on the previous month, again primarily as a result of an increase in turnover in trade in motor fuels. The year-on-year decline in turnover in retail other than motor fuels is in line with the decline in domestic consumption during this period, an indication of the decline in household purchasing power as a result of the adverse situation on the labour market. Despite the adverse economic situation, volume turnover in trade and repair of motor vehicles in the second quarter was up 0.2% on the first quarter, 2.7 percentage points less than the average increase in the last two years. The year-on-year rate of growth also remains high, at just under 10%, despite a slowdown. The aforementioned turnover was also up 0.3% on the previous month in July.

Confidence in the economy has continued to decline since May, and the manufacturing confidence indicator was negative in August for the first time since last December. The indicator of economic sentiment declined in August to reach its level from the beginning of the year. In the manufacturing sector there was a sharp decline in the indicators of current demand and output, while the indicators of demand and output expectations remained at high levels. Confidence in the retail sector declined in August for the second consecutive month. The indicator has fluctuated sharply this year, but its level in the last

two months has been considerably more in line with the movements in volume turnover in the retail sector and the decline in household purchasing power. Here the movements in various indicators in August reveal a general deterioration in the sector. In contrast to retail, confidence in other service sectors has remained relatively high. The indicators of current demand and demand expectations also remained high in August. In construction sector and among consumers, pessimism still prevails.

Labour market

The number of registered unemployed continued to fall in June, but rose slightly again in July in line with the seasonal trends. There were 107,562 registered unemployed in July, down 1,072 on May, but up 481 on

June. The fall in unemployment in the first half of the year was typical of previous years, other than 2009, which was affected most strongly by the economic crisis. Year-on-year growth in the number of registered unemployed declined to 9.3% in July. The registered unemployment rate has also continued to fall, reaching 11.4% in June. In July 6,890 people deregistered as unemployed, two-thirds of whom moved into employment, while 7,371 were newly registered as unemployed. A total of 15,549 vacancies were notified in July, the number having increased overall since the beginning of 2010.

The workforce in employment continued to increase in May and June. The workforce in employment has been increasing continually since the beginning of the year, although May's increase was more pronounced. In June, the workforce in employment in the private sector was up 1,900 on April. The year-on-year decline in the workforce in employment in the private sector slowed slightly in May and June compared with April to 1.7%. The main contributions to the increase in the workforce in

Total wage bill and average monthly gross wage per employee

*The wage bill is calculated as the product of the average gross wage for employees of legal persons who received pay and the total number of employees of legal persons.

employment came from the sectors of professional, scientific and technical activities (380), manufacturing (350), construction (320) and accommodation and food service activities (also 320). The workforce in employment in construction has been increasing since March, gradually slowing the year-on-year decline, although it remains the

largest among all the sectors of the economy, at 12.4%. The workforce in employment in the public sector has also increased in recent months, and in June it was up 430 on April. The largest increases in the workforce in employment during the first six months of the year were in the sectors of health (970) and education (340), where the year-on-year rate of growth was also positive, at 2.0% and 1.6% respectively in June. The workforce in employment in public administration was up 130, while the workforce in employment in arts, entertainment and recreation activities was down 150. In all these sectors the workforce in employment has been declining in year-on-year terms since the beginning of the year.

The average gross wage per employee in June was up 2.0% in year-on-year terms at EUR 1,521, but growth is gradually slowing. The average gross wage in the private sector in June was up 2.8% in year-on-year terms, 1 percentage point less than in the previous month, and around 2 percentage points less than in the early part of the year. The decline from the previous month was primarily related to the number of working days, while the slowdown relative to the beginning of the year was related to a base effect from March 2010, when the rise in the minimum wage increased the level of average gross wage by just over 1%. The largest overall year-on-year increases in private sector wages in May and June were recorded by agriculture (5.0%), manufacturing (4.5%) and electricity, gas, steam and air conditioning supply (7.0%). The average gross wage in the public sector remained almost unchanged in June, as a result of the ongoing wage freeze imposed by austerity measures. In June, the nominal wage bill, which covers all corporate employees, was unchanged in both the private and public sectors.

Selected competitiveness indicators

The harmonised index of the nominal effective exchange rate depreciated in monthly terms in July, the year-on-year appreciation thereby declining. The harmonised index of the nominal effective exchange rate in July was down around 0.2% on the previous month. The euro fell against all major currencies in July, most notably against the Swiss franc (2.7%) and the Japanese yen (2.2%). The euro also fell by 0.9% against the US dollar

and by 0.3% against the pound sterling. The main factors in the euro's fall against major currencies were the increasing uncertainty surrounding the debt crisis in certain euro area countries, and the effects of this crisis passing through to other individual euro area countries. As a result of a base effect, the year-on-year appreciation in the nominal effective exchange rate declined from 1.5% in June to 0.8% in July.

The harmonised index of the real effective exchange rate as measured by consumer prices declined in July in monthly terms, primarily as a result of the decline in the nominal effective exchange rate. The index of the real effective exchange rate in July was down 0.3% on June. The gap by which the monthly decline in

domestic prices outpaced the basket of foreign prices accounted for 0.1 percentage points of the depreciation. The year-on-year depreciation in the real effective exchange rate was significantly larger, having increased from 0.1% in June to 0.8% in July. The lower year-on-year growth in domestic prices than in the basket of foreign prices contributed 1.6 percentage points to the year-on-year depreciation in the index. The year-on-year appreciation in the nominal effective exchange rate reduced the depreciation by 0.8 percentage points.

The gap by which Slovenia's price competitiveness trails that of the main euro area trading partners narrowed somewhat during the first seven months of the year. The decline in Slovenia's harmonised index of price competitiveness in July compared with the previous month was approximately 0.2 percentage points less than the average change in the main euro area trading partners. The gap by which Slovenia's price competitiveness trails that of the main euro area trading partners nevertheless narrowed during the first seven months of the year. In Slovenia, price competitiveness improved by 0.8% in year-on-year terms in July, compared with an average deterioration of 0.9% in the main euro area trading partners. Germany has continued to best maintain its price competitiveness in the long term.

In the first quarter, the harmonised index of price competitiveness as measured by the GDP deflator, which reflects the general level of prices in the economy, depreciated in quarterly and year-on-year terms.² The indicator recorded a quarterly decline of 0.4% in the first quarter, approximately the same as the average decline in the main euro area trading partners. Slovenia's competitiveness indicator was down by 1.7% in year-on-year terms, compared with an average of 2.2% in the trading partners. The gap by which Slovenia's price competitiveness as measured by the GDP deflator trails the average of the main euro area trading partners narrowed. Having stood at 1 percentage point in the final quarter of 2010, it narrowed to 0.5 percentage points in the first quarter of this year.

The gap by which Slovenia's cost competitiveness trails the key euro area trading partners widened again in the first quarter.² The harmonised index of price competitiveness as measured by unit labour costs in the total economy recorded a quarterly depreciation of 0.3% and a year-on-year depreciation of 1.9% in the first quarter. This was less than in the final quarter of 2010, when the quarterly depreciation stood at 0.5% and the year-on-year depreciation at 2.4%. In light of the relatively high level of unit labour costs, cost adjustment to the lower level of activity is continuing, but remains

² The European Commission also publishes price and cost competitiveness indicators (http://ec.europa.eu/economy_finance/db_indicators/db_indicators8642_en.htm). These differ from those of the ECB because of methodological differences resulting from the countries covered, the different sources for the deflators and the data conversion methods.

Source: ECB.

slower than in the main euro area trading partners. The increase in Slovenia's cost competitiveness in the first quarter was 0.6 percentage points less in quarterly terms than the average increase in the trading partners, and 0.7 percentage points less in year-on-year terms.

3 | Price Developments

Year-on-year inflation as measured by the HICP was up 0.1 percentage points on the previous month in August at 1.2%, primarily as a result of movements in energy prices. Year-on-year growth in energy prices was up 1.9 percentage points on July at 7.5%, raising their contribution to inflation by 0.2 percentage points to 1.0 percentage points. The movement of oil prices on global markets was tracked by the government by means of adjustments in excise duties so that fuel prices in August were unchanged, and remained higher than the July average. Other energy prices were also higher in August than in July. Despite a renewed sharp fall in prices of vegetables, prices of unprocessed food were down less in monthly terms than in last August, which was a factor in their year-on-year growth, alongside a rise in prices of meat. However, year-on-year growth in other components declined. This was most evident in non-energy industrial

HICP growth rates

Source: SORS, Eurostat; Banka of Slovenia calculations.

goods, where the year-on-year fall in prices accelerated by 0.3 percentage points to 1.7%. This August's larger discounts than last August meant that prices of clothing and footwear fell again, as did prices of motorcycles and bicycles. Services prices also recorded larger year-on-year falls, primarily as a result of lower growth in prices of package holidays compared with last August. Year-on-year growth in prices of processed food declined slightly, primarily as a result of the last year's rise in excise duties on tobacco falling out of the calculation.

Core inflation fell in August, and has continued to reflect the relatively low level of final household consumption. Core inflation according to the HICP excluding energy, food, alcohol and tobacco was down 0.2 percent-

Individual price categories

Source: SORS, Bank of Slovenia calculations.

age points in year-on-year terms in August at -1.0%. Core inflation as measured by the HICP excluding energy and core inflation as measured by the HICP excluding energy and unprocessed food also fell, both to 0.1%. The persistent adverse situation on the labour market is reducing household purchasing power, as a result of which household consumption remains low. The resulting low level of turnover in the retail sector is continuing to curb the rise in prices by suppliers of goods and services.

After declining significantly in June, the monthly fall in prices in July was the largest since the data began being collated. Alongside the adverse macroeconomic situation and the movements in commodity prices, more pronounced seasonal movements and base effects were also factors in the decline in year-on-year price growth. Inflation as measured by the HICP in July was down 1.1 percentage points on June. According to the latest detailed figures, the largest contributions to July's fall in inflation of 0.6 percentage points to 1.1% came from prices of fruit and vegetables, motor fuels and footwear. After rising sharply in the first half of the year, prices of seasonal food fell significantly in June and July. Year-on-year growth prices of vegetables declined by 14.7 percentage points to -10.9%, while year-on-year growth of prices of fruit declined by 12.1 percentage points to 4.0%. Their fluctuation this year has been greater than in previous years. A pronounced seasonal dynamic was also reflected in prices of clothing and foot-

wear, which have displayed a falling trend since mid-2009. Year-on-year growth in July was down 0.6 percentage points at -4.1%. Despite rises in electricity and gas prices, the trend of declining year-on-year growth in energy prices continued. The rate in July was down 0.9 percentage points on June at 5.6%, primarily as a result of lower prices of fuels and lubricants and prices of heating oil as a result of the pass-through of June's fall in oil prices on global markets and base effects. At the same time year-on-year growth in prices of processed food increased by 0.4 percentage points to 5.2%, the highest rate since December 2008. This was a reflection of growth in prices of numerous products in the category, the largest increase in year-on-year price growth being recorded by milk, dairy products and eggs, which was up 2.4 percentage points at 5.3%. Oils and fats continued to record the highest growth in the category. The trend of a slowdown in the fall in prices of cars also continued.

Industrial producer prices on the domestic market in July were down slightly in monthly terms, but the year-on-year rate of growth remained unchanged. Year-on-year growth in industrial producer prices on the domestic market remained at 3.7%, having declined in the category of commodities and increased in the category of energy. Both categories were under the influence of price developments on the global market, which are rapidly reflected in industrial producer prices on the domestic market, as they enter in the early stages of the

Price Developments	Jul.11	Aug.11	Average of last 12 months	Aug.10	Aug.11

Note: Figures may not sum up to official figures due to rounding.

production chain. Year-on-year growth in prices of consumer goods on the domestic market declined in July, as a result of a decline in year-on-year growth in prices of non-durables, food products in particular. Year-on-year growth in prices in the manufacture of food products declined by 0.4 percentage points in July to 3.5%. The significant gap by which growth in prices in the manufacture of food products is outpaced by growth in food prices on global markets reveals the incomplete pass-through of price pressures in the production chain to consumers. The pass-through of growth in US dollar prices of manufactured goods was mitigated during this period by the appreciation of the euro. Year-on-year growth in prices in the manufacture of food products was considerably lower than the record levels in the second half of 2007 and the first half of 2008, although the level of the prices - in a situation of declining purchasing power - has already drawn level with that in 2008. The lowest year-on-year growth was recorded by prices in the manufacture of leather and related products and in the manufacture of computer, electronic and optical products. The manufacture of chemicals and chemical products recorded the highest year-on-year growth.

4 | Balance of Payments

Current account

Growth in merchandise imports in the second quarter slowed more than exports, and the improvement in the current account position picked up pace. The surplus reached EUR 128 million in June, moving the cumulative deficit over the first five months of the year to a cumulative surplus of EUR 68 million. Alongside trade in services, the main factors in June's current account surplus were a merchandise trade surplus and a net inflow in official transfers. Alongside the year-on-year increase in the surplus of trade in services, the main factor in the cumulative surplus in the first six months of the year was net current transfers, which were up EUR 183 million in year-on-year terms. With the improvement in results in the second quarter, the current account deficit over the last 12 months diminished sharply in year-on-year terms, to stand at EUR 107 million or 0.3% of GDP in June, compared with 1.1% of GDP a year earlier. The narrowing of the deficit is in part an indication of the low level of domestic demand during this period.

The slowdown in economic growth, particularly in Slovenia's most important EU trading partners, is being evidenced in the trend of declining growth in merchandise trade. After stalling briefly in April, the

slowdown in the trend monthly growth in merchandise trade continued in May and June, more notably on the import side than the export side. Annualised trend growth in merchandise exports declined from 11.0% in April to just over 7.0% in June. The decline on the import side was more pronounced, the rate slowing from 7.0% in April to -1.4% in June. The gap by which trend growth in merchandise exports outpaced import growth stood at 2 percentage points in the first quarter, but increased to 4.5 percentage points in the second quarter. This year's slowing trend in merchandise trade has been tracked by a decline in year-on-year growth. Merchandise imports were up 3.9% in year-on-year terms in June at EUR

1,754 million, while merchandise exports were up 8.2% at EUR 1,797 million. For the first time since June 2009, a merchandise trade surplus was recorded, in the amount of EUR 42 million.³ The cumulative merchandise trade deficit over the 12 months to March widened to reach EUR 1,317 million or 3.6% of GDP. Under the influence of movements in the second quarter, the cumulative merchandise trade deficit in the 12 months to June diminished to EUR 1,220 million or 3.4% of GDP, compared with 2.8% of GDP in the same month last year.

The largest year-on-year slowdown was in growth in exports of intermediate goods, which nevertheless remained highest among all categories of goods. Year-on-year growth in exports of intermediate goods was down 10 percentage points on the first quarter at 16.7%, while growth in exports of consumer goods was down 3.4 percentage points at 7.6%. By contrast, growth in exports of capital goods increased further, from 9.0% in the first quarter to 12.6% in the second quarter. There were at least two factors in the increase: the effect of a relatively low base, and the nature of the production process for capital goods, which is longer than for other goods.

Given the high import component in merchandise exports and the slowdown in growth in manufacturing output, growth in imports of intermediate goods also recorded the largest decline. Year-on-year growth

³ According to the SORS figures (fob for exports, cif for imports), and excluding any adjustments in coverage (explained in the Methodological Notes appendix to the bulletin), the merchandise trade surplus in June stood at EUR 2 million.

in the second quarter more than halved to stand at 11.7%. Imports of capital goods were down 4.2% in year-on-year terms. Despite the low level of domestic demand growth in imports of consumer goods increased from 6.8% in the first quarter to 11.4% in the second quarter.

In the second quarter, growth in trade in services slowed more notably on the import side than on the export side, which further increased the surplus of trade in services. Year-on-year growth in exports of services stood at 10.6% in the first quarter, before declining to 6.6%, while year-on-year growth in imports declined from 6.0% to 3.0%. Exports of services in the first six months of the year were up 8.5% in year-on-year terms at EUR 2.3 billion, while imports were up 4.4% at EUR 1.5 billion. The surplus of trade in services in the first half

of the year was up EUR 114 million in year-on-year terms at EUR 761 million, or 4.3% of GDP.

Growth in travel revenues was relatively high in the first half of the year, while travel expenses declined sharply. Travel revenues in the first half of the year were up 6.7% in year-on-year terms, which in light of the increase of 8.8% in the number of foreign visitors and the increase of 9.4% in the number of overnight stays could indicate a slightly lower average spend than in previous years. Given the adverse situation on the labour market, the year-on-year decline in expenditure by domestic households on travel deepened further in the second quarter to 18.7%. The result of these movements was a year-on-year increase of EUR 126 million in the surplus in trade in travel services to EUR 611 million.

Source: Bank of Slovenia.

This year's largest increase has been in trade in communications services. During the first six months of the year, above-average increases on the export side were recorded by revenues from communications services (31.7%) and revenues from insurance (15.4%), while the lowest increases were recorded by revenues from construction and assembly work in the rest of the world and revenues from intellectual property services. As a result of favourable growth in merchandise trade, particularly in the first quarter, there was also a significant increase in revenues from transportation services, of 14.9%. The largest increase on the expense side was also recorded by communications services, at 26.8%. Above-average year-on-year increases were also recorded by expenses for financial services and trade intermediation services, although the proportion of total services imports that they account for remains small. In line with the low investment activity in the construction sector, expenses for construction and assembly work performed in Slovenia have stagnated at a low level.

The deficit in factor income in the first half of this year widened by EUR 91 million in year-on-year terms to EUR 301 million. The cumulative deficit in factor income over the 12 months to June increased to EUR 598 million or 1.7% of GDP, compared with 1.6% of GDP a year earlier. The surplus in labour income increased by EUR 7 million in year-on-year terms to EUR 74 million, while the deficit in capital income increased by EUR 100 million to EUR 375 million. Net outflows of income

from FDI accounted for the majority or EUR 238 million of this deficit in capital income. Reinvested and undistributed earnings accounted for EUR 111 million of this. The year-on-year widening of the deficit in capital income was to a great extent the result of an increase in net interest payments to the rest of the world. These amounted to EUR 93 million during the first half of the year, up EUR 33 million in year-on-year terms. As a result of July's rise in the ECB's key interest rate, interest payments to the rest of the world will increase further in the coming months.

This year's largest year-on-year improvement was recorded by current transfers. Current transfers recorded a net inflow of EUR 86 million in the first half of the year, compared with a net outflow of EUR 97 million in the same period last year, a year-on-year improvement of EUR 183 million. The main factor in the surplus was a net inflow of EUR 106 million in official transfers. The majority of the net inflow in official transfers comprised funds from the EU budget for the implementation of the common agricultural and fisheries policy, and money from the structural funds and regional development funds, while money from the European Social Fund was also a factor.

Capital and financial account

The private sector's net financial outflows increased to EUR 1.8 billion in the first six months of the year, up just under EUR 0.9 billion on the same period last year. The increase in the net outflow was primarily

the result of an increase in residents' holdings of currency and deposits in the rest of the world. Claims increased by EUR 1.7 billion in the first half of this year, EUR 0.7 billion more than in the same period last year. The main factors in this year's increase in claims were an increase of EUR 778 million in residents' holdings of currency and deposits in the rest of the world, an increase of EUR 487 million in investments in securities, and an increase of EUR 411 million in trade credits. The household sector's outflows of currency and deposits to the rest of the world amounted to EUR 654 million in the first half of the year, up EUR 223 million on the same period last year, while the banks recorded an increase of EUR 193 million in their holdings of currency and deposits in the rest of the world, compared with a decline of EUR 302 million in the same period last year. The domestic banks continued to reduce their lending activity in the rest of the world in the first half of the year. They reduced loans to the rest of the world by EUR 43 million, less than the decline of EUR 162 million in the first half of last year. A lesser factor in the increase in the net financial outflow

was a decline in liabilities to the rest of the world.

After increasing by EUR 49 million in the first half of last year, the private sector's liabilities to the rest of the world declined by EUR 147 million in the first half of this year, primarily as a result of debt repayments by the domestic banks in the rest of the world. This year the banks reduced loans from the rest of the world by EUR 809 million, EUR 466 million more than in the first half of last year. Another factor in the decline in liabilities was a decline of EUR 282 million in non-residents' holdings of currency and deposits at domestic banks, while non-residents' inward FDI and portfolio investments increased by a total of EUR 584 million this year. Inflows from investments in bank bonds were up EUR 349 million on the same period last year. The major factors in this were the issue of SID banka bonds in the amount of EUR 350 million in March and a repo deal for NLB securities in the amount of EUR 211 million in June. After declining by EUR 66 million in the first half of last year, FDI increased by EUR 295 million this year.

Sions: inflows or increases in liabilities (+), outflows or increases in claims (-).

The net external debt declined by EUR 157 million in the first half of the year, primarily as a result of an increase in residents' holdings of short-term deposits and currency in the rest of the world. Gross claims from short-term deposits were up EUR 956 million on the end of last year, the majority of the increase being recorded in January. Gross claims at the end of June were up EUR 1.8 billion on the end of last year, primarily as a result of investments in money-market instruments in the amount of EUR 452 million and an increase of EUR 320 million in long-term loans to the rest of the world by domestic banks and the government sector. The gross external debt increased by EUR 1.7 billion in the first six months of the year, primarily as a result of government

borrowing in the amount of EUR 2.5 billion. The government sector's net external debt increased by EUR 2.2 billion this year. The banks reduced their net external debt by EUR 1.1 billion this year, primarily as a result of repayments of long-term loans from the rest of the world in the amount of EUR 800 million and a decline of EUR 523 million in non-residents' holdings of short-term deposits and currency at domestic banks.

5 | Public Finance

The consolidated general government deficit in the first half of the year narrowed in year-on-year terms as a result of an improvement in growth in revenues and restricted growth in expenditure. The consolidated general government deficit amounted to EUR 922 million, EUR 448 million less than in the same period last year. The primary deficit narrowed in year-on-year terms, as growth in primary revenues outpaced growth in primary expenditure by 7.8 percentage points. Primary revenues were nevertheless lower than anticipated. The restriction of growth in expenditure was primarily effected by the implementation of the emergency law from last autumn, which allows for this year's increase in wages and social transfers to be just a quarter of the customary legal limit, and by a contraction in investment, which has been underway since the end of last year. Net interest payments were higher as a result of the higher debt. The consolidated general government deficit in the 12 months to June stood at 4.0% of GDP.

The government is proposing a revision to this year's state budget, according to which the deficit will be 4.6% of GDP, as anticipated in the budget already approved. The revision is the consequence of the lower estimate for this year's state budget revenues as a result of a change in macroeconomic assumptions, lower revenue realisation than anticipated in 2010, and a lower estimate for funds received from the EU this year. In addition, the revision needs to reallocate budget expenditure, particularly on account of the situation on the labour market

being worse than expected when the budget was drafted. Under the proposed revision, revenues and expenditure are both cut by EUR 365 million, and the deficit is estimated to remain at EUR 1,688 million. The largest cuts in revenue are expected for funds received from the EU

(EUR 205 million) and excise duties (EUR 93 million). On the expenditure side the largest cut is in investment expenditure and transfers (almost EUR 390 million). Increases in expenditure are planned for transfers to the unemployed (EUR 100 million) and transfers to the social security funds, primarily the Pension and Disability Insurance Institute (EUR 120 million). The capital increase already carried out at NLB and the projected transfer to Slovenian Railways are not included in the aforementioned deficit, which relates to the primary balance of revenues and expenditure expressed by means of a cash flow methodology. The state budget deficit during the first seven months of the year stood at EUR 1,113 million, EUR 311 million less than in the same period last year.

The local government budget position was positive in the first half of the year, while the Health Insurance Institute has disclosed a relatively high deficit, which resulted in a revision to its financial plan. Local government recorded a budget surplus of almost EUR 20 million in the first half of the year, compared with a deficit

Note: * Consolidated central government budget, local government budgets and social security funds (pension and disability insurance fund and health insurance fund) in cash accounting principle.

of EUR 31 million in the same period last year. The improvement in the position was primarily the result of a contraction in investment expenditure. The HII's deficit in the first seven months of the year amounted to EUR 40 million, compared with EUR 22 million in the same period last year. The financial plan for this year anticipates a balanced budget. Given the size of the deficit, the changes in projections for this year's revenues and expenditure, and actual revenues and expenditure that differ from the estimations in 2010, the HII's assembly adopted a revision to the financial plan in August. The planned measures reduce expenditure by EUR 12 million, and the year-end deficit is planned at around EUR 19 million, which the HII will be able to finance without borrowing.

Consolidated general government revenues in the first half of the year were up 9.4% in year-on-year terms. Positive growth was recorded by all major categories of revenues, the largest contribution to growth in the first half of the year coming from corporate income tax revenues. Consolidated general government revenues in the first half of the year were up EUR 640 million in year-on-year terms. The main increase was in corporate income tax revenues (EUR 201 million), as corporates were required to make top-up payments in their settlements for 2010, having been refunded overpaid tax by the government last year. Other increases were recorded by VAT revenues (EUR 126

million) and funds received from the EU budget (EUR 160 million). Revenues from excise duties, personal income tax and social contributions were also higher in the first half of this year. The figures for inflows of taxes and contributions during the first seven months of the year show year-on-year growth of 5.1%, down slightly on the overall rate in the first half of the year. The main reasons for July's slowdown are a slight increase in this year's refunds of personal income tax for the previous year, a change of timing in the payment of excise duties, which will partly be made in August, the effect of a higher basis in the calculation of growth in corporate income tax, and low growth in VAT revenues. Despite the relatively favourable growth compared with last year, the Ministry of Finance's estimates indicate that this year's state budget revenues will be lower than anticipated in this year's budget, which was one of the reasons for the drafting of the revision.

Growth in general government expenditure during the first half of the year stood at 2.4%, and is gradually declining. The main increases were in expenditure on interest and social transfers, while investment expenditure is contracting. Consolidated general government expenditure in the first half of the year was up EUR 192 million in year-on-year terms, pension expenditure accounting for EUR 74 million of this. The final factor this year is an increase in the number of pensioners, as February's increase in pensions was a low 0.4%,

Note: *All bond issues disbursed on domestic market are counted under domestic borrowing, despite of the residency of buyers.

in line with the emergency law. The number of old-age pensioners during the first seven months of the year was up 4.9% in year-on-year terms, compared with an overall increase of 4.1% last year. Higher debt meant that interest payments in the first half of the year were up EUR 37 million, and there was an identical increase in transfers to the unemployed, a reflection of the adverse situation on the labour market. The largest declines were in investment expenditure and investment transfers, which in the first half of the year were down EUR 62 million in year-on-year terms.

The government borrowed slightly less than EUR 3.1 billion in the first half of the year. The government's total claims against the EFSF amounted to EUR 57 million at the end of June, in addition to which Slovenia had approved EUR 130 million of loans to Greece by the end of July. In addition to the issue of long-term bonds in the amount of EUR 3 billion, some of the borrowing was made by means of 3-month treasury bills and loans raised on the domestic market. The borrowing was used to finance EUR 922 million of consolidated general government deficit and to repay EUR 951 million of debt, while the government also increased its cash and deposits by EUR 830 billion. The deficit in the account of financial claims and investments was also financed in the amount of EUR 375 million, which includes the capital increase at NLB (EUR 243 million) and the loans to Greece (EUR 104 million). Slovenia made a loan of EUR

26 million to Greece in July as part of a new tranche. A second package of assistance for Greece was approved in July in the amount of EUR 109 billion (the first was EUR 110 billion). The assistance in the second package will be covered by the EFSF, with the IMF contributing part of the money. Slovenia will also participate in the second package, but like certain other countries requires collateral for its contribution. The stock of loans made by Slovenia to Portugal and Ireland under the EFSF stood at EUR 57 million at the end of June.

The premium on Slovenian 10-year government bonds over the German benchmark rose by around 100 basis points in the summer months, but fell again slightly in August. The premium over the German benchmark bond averaged 258 basis points in August, almost 100 basis points more than before the summer (the premium stood at 166 basis points in June), but fell in the second half of August to end the month settled at around 250 basis points. In light of the high sovereign debt of Italy and Spain, in July the financial markets increased the pressure on the government bonds of the two aforementioned countries, which raised their premiums over the German benchmark bonds. The premiums on certain other euro area government bonds also rose. The Eurosystem began intervening in the second half of August to purchase certain euro area government bonds. The premiums on Italian and Spanish government bonds fell again. The premiums on certain other euro area government bonds also fell, including those of Slovenia.

Sources: Bloomberg, Bank of Slovenia calculations.

Note: Spread is calculated as a difference between yield of 10-year government bond and the yield of reference German bond on a daily basis and is used as a measure of country's credit risk. * In the picture SLOREP 01/21 is used after 11. January 2011.

6 | Banking System*

After declining by EUR 183 million in June, the banking system's total assets increased by EUR 253 million in July. The main factors on the funding side in June's decline were a decline in liabilities on the basis of issued debt securities and a decline in liabilities to foreign banks. There was a decline in deposits at the central bank and investments in securities. July's increase in the

* The book figures for banks are used in this section, and differ in methodological terms from the published statistics.

banking system's total assets was the result of an increase in liabilities to foreign banks. Net lending to non-banking sectors declined in June and July, primarily as a result of a decline in loans to non-financial corporations, while lending to households continued to grow. The domestic banks saw an above-average decline in lending activity. The banks' current investments in the rest of the world increased in June, and particularly in July. The ongoing net repayment of the banking system's debt consequently slowed slightly in July.

Loans to non-banking sectors declined by EUR 44 million in June, and by double this in July. Year-on-year growth in loans to non-banking sectors stood at -0.9% in July. Alongside a decline in lending to non-financial corporations in June, another factor in the net decline in loans in the last two months was July's decline in loans to OFIs and non-residents. The proportion of loans to non-banking sectors accounted for by long-term loans is continuing to increase. The net stock of loans to non-financial corporations declined by EUR 26 million in June and EUR 134 million in July. The large domestic banks were the main factor in this.

Loans to households recorded an above-average increase in July. There was a net increase of EUR 37 million in loans to households in June, and an increase of EUR 77 million in July, significantly more than this year's monthly average, in which the banks under majority foreign ownership were the main factor. The rise in the

Swiss franc was also partly responsible for the increase. Year-on-year growth in loans to households is nevertheless gradually declining. In June and July it was lower than this year's average. In the maturity breakdown, the largest increase in loans to households in June and July was recorded by long-term loans.

On the funding side the banks slowed their trend of debt repayments to banks in the rest of the world in June and July. They reduced their net liabilities to banks in the rest of the world by a total of EUR 880 million during the first seven months of the year. There was no significant change in liabilities to the Eurosystem in June and July. They finished July down EUR 139 million on the end of last year.

Government deposits were the reason for June's increase and July's decline in deposits by non-banking sector. Household deposits increased slightly in the last two months, particularly at the banks under majority foreign ownership. June's modest increase in deposits by non-financial corporations was followed by a large increase in July. The increase in deposits by non-banking sector in June and July was more moderate than in the same months last year. There was a decline in short-term deposits in July as a result of a decline in government deposits, while there was an above-average increase in deposits of 1 to 2 years in June and July.

The banking system's gross income during the first seven months of the year was down 1.3% on the

same period last year, while pre-tax profit was down 44%. Net interest during the first seven months of the year was up 1% in year-on-year terms, while non-interest income was down 7%. Gross income during the first seven months of the year was consequently down in year-on-year terms. The banks continue to increase impairments and provisioning. Impairment and provisioning costs during the first seven months of the year totalled EUR 357 million, up 6.9% on the same period last year. The banking system generated a pre-tax profit of EUR 48 million during the first seven months of the year.

7 | Domestic Financial Markets

The market capitalisation of bonds on the Ljubljana Stock Exchange rose by 0.2% in June, but fell by 0.3% in July. Bonds issued by Banka Celje, KS Naložbe and Gorica-based Finančna delniška družba were all listed for trading on the regulated market at the Ljubljana Stock Exchange in June and July. Despite the three newly issued bonds, the volume of trading fell by 16.2% in June and 45.3% in July. Slovenska odškodninska družba 2nd-issue bonds accounted for almost half of the volume during the two months, and were the most liquid bonds in the first half of the year, accounting for 42% of the volume. The volume of trading in June's second most

liquid bond, the newly issued Banka Celje 15th-issue bonds, amounted to EUR 0.6 million. The second most-liquid bond in July was the 21st-issue government bonds, whose volume amounted to EUR 0.3 million. The proportion of total stock exchange volume accounted for by bonds fell to 8.7% in June and 7.3% in July.

The market capitalisation of shares on the Ljubljana Stock Exchange fell by 2.8% in June, and by 0.6% in July. The monthly volume of trading was up 11.7% in June, but fell by a third in July. It stood at EUR 36.9 million in June, or 88.2% of total stock exchange volume, and EUR 24.6 million in July, or 90.3% of total stock exchange volume. Krka shares recorded the largest volume in both months, at EUR 30.1 million in total. Krka shares accounted for 42% of the total volume of trading in shares in the first half of the year. Shares of the ALTA Group were listed for trading on the Ljubljana Stock Exchange in June, while shares of Košaki TMI were delisted after 12 months in July. The dividend yield in the prime market has gradually been rising since last October, and reached 2.76% at the end of July. The SBI TOP stock market index has continued to fall. It fell by 3.9% in June, taking the year-on-year change to -15.7%, and by 2% in July, taking the year-on-year change to -10.6%. The SBI TOP ended July at 727.

Most of major global indices and Balkan indices recorded negative changes in June and July, but all the indices recorded positive year-on-year changes for the third consecutive month. The year-on-year

changes were as follows in July: +0.4% for the DJ EuroStoxx, +17.3% for the S&P 500, +6.7% for the Hang Seng, +17.1% for the CROBEX, +12.9% for the BELEX 15 and +6.3% for the MBI-10.

The proportion of the market capitalisation of shares on the Ljubljana Stock Exchange accounted for by non-residents fluctuated around 12% in June and July. Net purchases of Slovenian shares by non-residents recorded their highest value of the year in June at EUR 72.8 million, but fell to EUR 14.2 million in July. As a result of the increase in the share capital of Unicredit Banka, the majority of trading in June and July (EUR 50 million) was made in ordinary BAS1R shares, which were primarily purchased by residents of Austria. Net sales of shares in June and July amounted to EUR 4.6 million, residents of Luxembourg recording the largest net sales. The largest net purchasers of shares were residents of Austria (EUR 46.2 million) in June, and residents of the US in July (EUR 6.6 million). Non-residents made net sales of EUR 4.6 million in bonds from Slovenian issuers in June, and net purchases of EUR 22.8 million in July. Residents of Austria were the largest net purchasers of bonds in June, while residents of the UK were the largest net purchasers in July. Residents of Luxembourg were the largest net sellers of bonds during both months.

Residents made net sales of EUR 60.5 million in bonds in June, and net sales of EUR 97.5 million in July. Residents made net purchases of EUR 29.8 mil-

lion in shares of foreign issuers in June, and net sales of EUR 21.8 million in July. The largest net sales of foreign shares were recorded by households in June, and by banks in July. Three-quarters of July's net sales (EUR 15 million) were made in shares in NLB West-East Banka from Sofia. The banking sector was prevalent in the net investments in foreign shares in June, making purchases of EUR 44.3 million, while the largest purchases in July were made by other financial intermediaries except insurance corporations and pension funds, at EUR 6.3 million. The main net seller of bonds was the banking sector, which in June and July made EUR 191.1 million of net sales in foreign debt securities, primarily bonds from euro area countries. Insurance corporations and pension funds were the prevailing net purchasers of foreign bonds in June, making purchases of EUR 49.8 million, while the largest net purchases in July were made by households, at EUR 1.3 million.

The domestic mutual funds' assets under management declined to EUR 1,982 million in July, as a result of net withdrawals totalling EUR 13.6 million in June and July, and falls in the average unit price of 2% in June and 1.3% in July. Investors made net withdrawals of EUR 3.9 million from mutual funds under majority bank ownership in July, these funds having recorded net withdrawals for the last nine months. Although the non-bank mutual funds have seen more net inflows, they recorded net withdrawals for the third consecutive month in July, of EUR 6.1 million. The largest net withdrawals in June and

July were recorded by balanced funds and equity funds, at totals of EUR 8.9 million and EUR 7 million respectively. The largest net inflows were recorded by money-market funds in June, at EUR 1.6 million, and by bond funds in July, at EUR 1.2 million. The household sector made net withdrawals of EUR 17.4 million in June and July, while insurance corporations and pension funds paid in net inflows of EUR 7.5 million. The proportion of the domestic mutual funds' assets accounted for by liquid assets⁴ declined to 8.8% at the end of July.

⁶ Liquid assets include cash, deposits, money-market instruments and government bonds.

IV. NOTES ON METHODOLOGY

General notes

Sectors

For data from 30 April 1999 onwards, a sectorization has been implemented according to the Regulation on Introduction and Implementation of Standard Classification of Institutional Sectors (hereinafter SKIS), published in the Official Gazette No. 56/98. SKIS, which implemented a national standard for economic sectorization, based on the European System of Accounts 95 and is in accordance with the System of National Accounts 93. According to SKIS, the economy is divided into the following sectors: non-financial corporations, financial corporations (central bank, commercial banks, and other financial institutions), general government, households, non-profit institutions serving households, and the external sector (non-residents).

The external sector comprises non-residents; the domestic sector, residents.

Residents of the Republic of Slovenia are defined as:

- companies and other legal entities with a registered office in the Republic of Slovenia, not including their branches abroad;
- branches of foreign companies entered in the Register of Companies of the Republic of Slovenia;
- sole proprietors or natural persons independently performing business activities as their primary occupation, with a registered office in the Republic of Slovenia or having permanent residence in the Republic of Slovenia;
- natural persons with permanent residence in the Republic of Slovenia;
- natural persons temporarily residing in the Republic of Slovenia, holding a residential or working visa valid for no less than six months; and
- diplomatic, consular and other representative offices of the Republic of Slovenia abroad which are financed from the Budget, as well as Slovene citizens employed at these representative offices and their family members.

All other persons and entities shall be deemed non-residents.

The domestic sector is broken down to the monetary sector and non-monetary sectors. The monetary sector consists of the Bank of Slovenia and other monetary financial institutions (banks, savings banks and money market funds). Domestic monetary financial institutions, owned by both residents and non-residents, are included.

Non-monetary sectors are: non-financial corporations, non-monetary financial institutions, general government, households, and non-profit institutions serving households. Non-financial corporations (enterprises) are legal persons – market producers of goods and non-financial services.

The non-monetary financial institutions sector comprises other financial institutions. Other financial institutions are: other financial intermediaries, except insurance corporations and pension funds (mutual funds, investment funds and financial leasing companies), financial auxiliaries (securities brokers/dealers, stock exchanges) and insurance corporations and pension funds.

The general government consists of the central government (administrative departments of state and central government agencies), local government (local administration, local agencies) and social security funds.

“Households” refers to resident individuals as consumers, resident individuals as sole proprietorships, and partnerships being market producers and having no independent legal status. The data of the latter, prior to 30 April 1999, were included in the enterprises sector.

Non-profit institutions serving households are clubs, political parties, trade unions, churches or religious societies, humanitarian and charity organizations, and professional societies.

Characteristics of the data

- The data present stocks of assets and liabilities at the end of the period.
- Data on stocks denominated in foreign currencies are converted into domestic currency using the official end-of-period middle exchange rate.
- Data in tables are not seasonally adjusted.

Table: Republic of Slovenia: General Information

The table shows basic general data on Slovenia and its economy. In the "Latest actual" column, the latest available data for the current year are published. Sources of the data are the Bank of Slovenia, the Ministry of Finance and the Statistical Office of the Republic of Slovenia.

1. MONEY AND MONETARY FINANCIAL INSTITUTIONS

Data in all tables present stocks items at the end of the period. Last published data are preliminary.

The change in the reporting could cause some inconsistencies in conceptual definitions of some items in the year 2005 data.

Until the end of December 2006 the data is published in the currency SIT, from 1 January 2007 the data is published in the currency EUR. The currency EUR in the data until the end of December 2006 is considered as foreign currency, from 1 January 2007 as domestic currency.

Change of Methodology

In May 2006 the tables of the Money and Monetary Financial Institutions chapter, have been changed. Structurally similar tables are based on the methodology of the European Central Bank (ECB) or of the euro area and no more on the methodology of the International Monetary Fund. The data source for the data of the MFI's in the changed tables is the report of the monetary financial institutions and not the bookkeeping report of the banks and savings banks. The main methodological changes are explained below.

The data from the new tables is available since December 2004, while the time series of the old tables up to March 2006 are still available on the Bank of Slovenia internet page (<http://www.bsi.si/en/>).

The main differences between the methodology of the ECB and the tables in the monthly bulletin up to April 2006 are as follows:

- The sector of the monetary financial institutions, MFI, contains banks, savings banks, savings and loans undertakings and money market funds, but it does not include old LB in KBM banks, while the banking sector without savings banks, savings and loans undertakings and money market funds but with the old LB and KBM is presented in the old bulletin tables.
- Balance sheet total according to the ECB's methodology differs from the balance sheet total according to the IMF's methodology mainly because of the different treatment of the loans. The loans are recorded on gross basis in the new tables and net of provisions in the old set. Consequently the stock of the loans is different.
- There is a difference among the stock of the items loans and deposits and debt securities – among the claims and liabilities, because of the inclusion of the negotiable/non-negotiable securities into the items loans/deposits and debt securities. According to the ECB's methodology, the non-negotiable debt securities are included into the loans/deposits and the negotiable debt securities into the debt securities.
- According to the ECB's methodology, the deals by procurement and internal affairs are included on a net basis, while before they were shown on a gross basis.
- There are differences in the composition of monetary aggregates according to national definition and harmonized monetary aggregates according to the ECB's definition that are described below.

Since April 2006 the data of the specific balance sheet items (loans, deposits, securities other than shares and issued debt securities) are in line with the ECB's request recorded according to their nominal values. The nominal value of a specific instrument is an amount of the principal, which is owed by the debtor to the creditor:

- loans: unpaid principal, not included the accrued interest, the commissions and other expenses,
- deposits: amount of the time deposits, the accrued interest not included,
- debt securities: nominal value.

Interest, which is subscribed to the principal and thus increases it, is the component of the nominal value.

Description of the balance sheet instruments

Below is a short description of the balance sheet aggregate items or instruments, as defined by the European Central bank:

Cash

Holdings of domestic and foreign banknotes and coins in circulation that are commonly used to make payments.

Loans

For the purposes of the statistical reporting scheme, this item consists of funds lent by reporting agents to borrowers, which are not evidenced by documents or are represented by a single document (even if it has become negotiable). It includes assets in the form of deposits, bad debt loans, in respect of which repayment is overdue or otherwise identified as being impaired, traded loans, subordinated debt in the form of deposits or loans and claims under reverse repos. The stock of loans is included into the item according to the "gross" principle.

Securities other than shares

Holdings of securities other than shares or other equity, which are negotiable and usually traded on secondary markets or can be offset on the market, and which do not grant the holder any ownership rights over the issuing institution. Besides negotiable debt securities this item includes: negotiable loans that have been restructured into a large number of identical documents and that can be traded on secondary markets and subordinated debt in the form of debt securities. The item does not include the accrued interest – which are classified into the item remaining assets, except when the separation is not possible (when the interest is the inseparable part of the market price).

Shares and other equity

Holdings of securities which represent property rights in corporations or quasi-corporations. These securities generally entitle the holders to a share in the profits of corporations or quasi-corporations and to a share in their own funds in the event of liquidation. Mutual fund shares and money market fund shares/units are included here.

Remaining assets

This item may also include: financial derivative positions with gross positive market values, non-financial assets (tangible or intangible), accrued interest receivable on loans and securities, the surplus from the deals by procuration, internal affairs.

Deposits

Amounts owed to creditors by reporting agents, other than those arising from the issue of negotiable debt securities. Deposits also cover loans as liabilities of MFIs, which represent amounts received by MFIs that are not structured in the form of deposits, non-negotiable debt securities issued, liabilities for the loans received and where they are not separately stated also deposits redeemable at notice, repos and traded loans.

Debt securities issued

Securities other than equity issued by reporting agents, which are negotiable and usually traded on secondary markets or which can be offset on the market, and which do not grant the holder any ownership rights over the issuing institution, and the subordinated debt issued by MFI's in the form of the debt securities. The accrued interest are not included in the stock data, but classified to the remaining liabilities. The amount of debt securities is shown net of own purchase.

Capital and reserves

This category comprises the amounts arising from the issue of equity capital, including also non-distributed benefits or funds, specific and general provisions against loans, securities and other types of assets. The item is adequately netted for the own shares owned. This item also includes the difference between the revenues and expenditures during the year and the money market fund shares/units issued.

Remaining liabilities

The remaining liabilities consist of accrued interest payable on deposits and debt securities, provisions representing the liabilities vis-à-vis third persons, gross amounts payable in respect of transit items, financial derivative positions. The surplus of the liabilities over claims from the deals by procuration, internal affairs is also included here.

Tables

In May 2006 the tables from 1.1. to 1.8 have been changed and substituted with the new ones, which enables partial continuity of the old time series.

The entry to the euro area (on 1.1.2007) caused a break in the time series of the statistical tables in the Monthly bulletin in cases where the "currency" is an attribute. An expected reclassification of the data between the individual columns in the tables, which keep the same name takes place, for example of the stock of outstanding loans in euros from the time series of "foreign currency" before the introduction to the time series of "domestic currency" after the introduction of euro. To enable easier reconstruction of this change, the shares of the Euro amounts in stocks of the foreign currency on 31.12.2004, 31.12.2005 and 31.12.2006 are published in the Methodological notes for the tables 1.3, 1.4, 1.5 in 1.6, where the reclassification occurred.

Note 1: With the publication of April 2011 data the corrected time series on Deposit with agreed maturity and Deposit redeemable at notice (Tables 1.2., 1.4., 1.6.) were published for the period January 2009 to May 2010 due to the change on the source of the data.

Table 1.1.: Monetary Aggregates

The table shows stock data at the end of month for monetary aggregates M1, M2 and M3, calculated according to the definition of the European Central Bank.

The main characteristics of monetary aggregates under the ECB's definition:

- Inclusion of liabilities of MFI sectors to EMU non-monetary sectors,
- Exclusion of the monetary neutral sector (the central government has the status of a monetary neutral sector),
- Limited maturity of items included (liabilities of up to 2 years and deposits redeemable at notice of up to 3 months only),
- Equal treatment of the liabilities in domestic and foreign currency,
- Inclusion of the money market fund shares/units into M3.

Composition of monetary aggregates, as defined by the ECB is:

- M1 contains currency in circulation and overnight deposits,
- M2 includes beside M1 also deposits with agreed maturity of up to 2 years and deposits redeemable at notice of up to 3 months,
- M3 includes M2, repurchase agreements and debt securities with the maturity of up to 2 years and money market fund shares/units.

The table is split into two parts: the first part (before the entry of Slovenia into EMU until the end of December 2006) presents Monetary aggregates of Slovenia and the second part (after the entry of Slovenia into EMU from 1 January 2007 onwards) presents the contribution of Slovenia to monetary aggregates of EMU.

The item 'Currency in circulation' is calculated on the basis of the Capital Share Mechanism (CSM) which foresees the split of the total amount of issued banknotes in the euro area between the different national central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins (which are in fact the liability of the central government) are added to the total amount of banknotes. The item 'Cash' held by the MFIs is deducted from the total amount of currency (banknotes and coins).

The contribution of the Slovenia to the euro area monetary aggregates does not represent monetary aggregates of Slovenia. The concept of residency is the one of the euro area. Due to the consolidation within the MFI sector on the level of euro area countries the aggregate M3 could become smaller than M2.

Table 1.2.: Consolidated Balance Sheet of the Monetary Financial Institutions

The table shows the end of the month consolidated balance sheet of Bank of Slovenia and other monetary financial institutions, presented in the tables 1.3. and 1.4. The bilateral claims and liabilities of the sectors S.122 and S.121 are netted out. On the liability side of the balance sheet the liabilities to the central government sector (S.1311) in certain items are excluded and are included in the remaining liabilities.

The item 'Banknotes and coins' is for series after 1 January 2007 calculated on the basis of the Capital Share Mechanism (CSM) which foresees to split of the total amount issued in the euro area between the different National central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins (which are in fact the liability of the central government) are added to the total amount of banknotes.

Table 1.3.: Balance Sheet of the Bank of Slovenia

The table shows the Bank of Slovenia's assets and liabilities at the end of month in line with the methodology of the ECB. According to the ECB's methodology the item 'Banknotes and coins' includes the data of coins in circulation (which are in fact the liability of the central government) and excludes the data of issued payment notes, which are included in the remaining assets.

The item 'Banknotes and coins' is for series after 1 January 2007 calculated on the basis of the Capital Share Mechanism (CSM) which foresees to split of the total amount issued in the euro area between the different National central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins are added to the total amount of banknotes.

no.	table	column	sector	title	share of euro		
					31.12.2004	31.12.2005	31.12.2006
1	1.3.	assets/ 3		Claims on foreign sectors (foreign assets)/ Foreign cash	58%	48%	54%
2	1.3.	liabilities/ 4		Liabilities/ Deposits/ Domestic sectors/ Other MFIs/ Foreign currency	100%	100%	-

Table 1.7.: Balance sheet of the Bank of Slovenia – by instruments

The table shows the data of the balance sheet of the Bank of Slovenia, split by instruments of the monetary policy. The table is composed according to accounting rules of the ECB and differs from the table 1.3. Balance Sheet of the Bank of Slovenia, which is composed according to the statistical methodology of the ECB.

Table 1.8.: Investment funds
General

Methodology of investment fund statistics in Slovenia is based on Regulation (EC) No 958/2007 of the ECB of 27 July 2007 concerning statistics on the assets and liabilities of investment funds and Guideline of the ECB of 1 August 2007 on monetary, financial institutions and markets statistics (recast). Time series in tables are available from December 2008 on, when the new reporting of investment funds was introduced. The data is revised when publishing data for the next period.

Note 1: Financial sectors comprise Bank of Slovenia, other monetary financial institutions (banks, saving banks and monetary funds) and other financial institutions (other financial intermediaries, except insurance corporation and pension funds, financial auxiliaries and insurance corporations and pension funds).

Note 2: Non-financial sectors are formed by non-financial corporations, general government, households and non-profit institutions serving households.

Note 3: Monetary funds are included in the sector of other monetary financial institutions and not in the other financial intermediaries, where investment funds are classified.

Deposit

This item consists of transferable deposits (sight deposits) and other deposits. Other deposits are deposits, which cannot be used for payments and cannot be exchanged for transferable deposits without significant constraints or extra costs. They comprise deposits with agreed maturity, certificates of deposits, which are non-tradable or whose tradability, although theoretically possible, is very limited and other non-transferable deposits.

Debt securities

Debt securities are short-term or long-term.

Short-term ones include all instruments of monetary market with original maturity of one year or less.

Long-term debt securities are securities with original maturity of more than one year and include bonds, instruments of monetary market with original maturity of more than one year and other debt securities.

Interest-bearing securities are shown including interests. In case interests cannot be included with debt securities, they are shown separately under the item other assets.

Shares and other equity

The item includes shares and units/shares of investment fund.

Shares are financial assets, which represent the right of ownership to the joint-stock companies. These financial assets usually give the owners the right to certain share in profit of the joint-stock companies and to certain share in their net assets when winding up.

Units/shares of investment fund include units or shares of open-end and closed-end investment funds.

Other assets

Under this item the claims on sold or mature investment, claims on Asset Management Company and trustee, interest and dividend claims, claims on securities' obligations, other corporate claims, accruals and prepaid expenditure are reported. Accruals and prepaid expenditure include deferred expenses or costs, short-term accrued revenues and also deferred interests.

Financial derivatives are either financial assets or financial liabilities; in balance sheet they are recorded as unnetted.

Loans

The item includes loans borrowed, covering loans, repurchase agreements and other forms of loan as techniques and tools for managing the investments of investment funds.

Investment fund shares/units

Investment fund shares/units represent total liability to shareholders or investors of investment fund.

Other liabilities

The item other liabilities include corporate liabilities of investment fund, namely liabilities from financial instruments' purchase, management liabilities, tax liabilities, liabilities of distribution of profits or other payments to holders of units or shareholders, other corporate liabilities, accruals and income collected in advance and financial derivatives.

Accruals and income collected in advance include accrued costs or accrued charges and prepaid income. Under this item deferred interests are also reported.

2. FINANCIAL MARKETS AND PAYMENT SYSTEMS

Interest rates (tables 2.1–2.4)

Table 2.1: Bank of Slovenia Interest Rates

Lombard loan: Within the framework of a standing Lombard facility, the Bank of Slovenia provides one-day Lombard loans to banks and savings banks with securities used as collateral. The pledged securities should amount to 110% of the amount of the Lombard loan.

The *repo interest rate* for the temporary purchase of treasury bills and tolar and foreign currency bills of the Bank of Slovenia with obligatory repurchase in seven days was the weighted arithmetic average of daily repo interest rates until March 2004 (effective interest rate). The new seven-day repo was introduced in March 2004; it is offered on a closed basis. The interest rate given is the latest valid interest rate.

Interest rate on banks' obligatory reserves: 1 percent per year since October 1991.

The overnight-deposit interest rate is an interest rate applying to deposits placed by banks and savings banks on an overnight term with the Bank of Slovenia.

Long-term deposit at the Bank of Slovenia was established in July 2004. The variable interest rate is defined once every two months for the next two-month period. It refers to the interest rate for 60-day tolar bills valid at the time of quotation, increased by 0.2 percentage points.

Tolar bills are registered securities subscribed by banks and savings banks with a maturity of 60 or 270 days. Sixty-day bills are offered on a permanent basis; 270-day bills were sold by auction until February 2004, and since then have been offered on a closed basis. Interest rates for tolar bills are given nominally; in the case of auctions they are effective rates. Offers of 270-tolar bills have been frozen since November 2004.

Foreign currency bills are transferable registered securities not issued in series. They are offered on a permanent basis and can be purchased by banks (or by other legal persons through banks until 3 May 2000). They are sold for euros (or German marks until February 1999, or U.S. dollars until June 2006) at a discount with maturities of two to four months.

A penalty rate is generally employed in cases of overdue payments. The penalty rate has been determined by the Law on the Legal Penalty Rate since 28 June 2003.

Interest rates for a certain type of instrument in the table are those last valid in a period (except in the case of effective interest rates). The annual averages of interest rates are computed as simple arithmetic averages of monthly data, if such data are available.

Table 2.2: Interbank Money Market Rates and Indexation Clause

Interbank market

SIONIA/SITIBOR

Until 31 December 2006, the figures are annual nominal interest rates for unsecured Slovenian tolar deposits on the Slovenian interbank market. The interest rate for overnight deposits (SIONIA) is the weighted average interest rate for overnight deposits.

SITIBOR is the rate at which Slovenian interbank term deposits are offered by one prime bank to another prime bank.

SIONIA and SITIBOR were valid from 14 July 2003 to 31 December 2006. Break of series in January 2007.

EONIA/EURIBOR

Eonia® (Euro OverNight Index Average) is the effective overnight reference rate for the euro. It is computed as a weighted average of all overnight unsecured lending transactions undertaken in the interbank market, initiated within the euro area by the contributing banks.

The Euro Interbank Offered Rate – “Euribor®” – is the money market reference rate for the euro. It is sponsored by the European Banking Federation, which represents the interests of 4,500 banks in 24 Member States of the European Union and Iceland, Norway and Switzerland, as well as the Financial Markets Association. Euribor® is the rate at which euro interbank term deposits are being offered within the EMU zone by one prime bank to another

Indexation clauses

TOM

The tolar indexation clause (TOM) is an annual interest rate calculated by the Statistical Office of the Republic of Slovenia and used for preserving the value of financial liabilities and assets in domestic currency.

TOM (monthly): since 5 August 1995, the average of the previous 3 months' inflation. (Until June 1995, indexation was based on the so-called R, which was equal to the previous month's inflation rate; from 1 June to 4 August 1995, indexation

was based on the average of the previous 3 months' inflation.) From February 1996, 4 months; from December 1996, 6 months; and from May 1997, 12 months. Financial liabilities and assets in domestic currency with maturity less than 1 year have not been revalued since July 2002.

Foreign exchange indexation clause USD and CHF

The monthly rate is the growth rate of the end-of-month exchange rate for USD and CHF.

The annual rate is computed from the monthly rate on the conform basis, taking into account the actual number of days in the month and the year.

Table 2.3: European Central Bank Interest Rates

Counterparties can use the **deposit facility** to make overnight deposits with the NCBs. The interest rate on the deposit facility normally provides a floor for the overnight market interest rate.

Main refinancing operations are regular liquidity-providing reverse transactions with a frequency and maturity of one week. They are executed by the NCBs on the basis of standard tenders and according to a pre-specified calendar. The main refinancing operations play a pivotal role in fulfilling the aims of the Eurosystem's open market operations and provide the bulk of refinancing to the financial sector.

Counterparties can use the **marginal lending facility** to obtain overnight liquidity from NCBs against eligible assets. The interest rate on the marginal lending facility normally provides a ceiling for the overnight market interest rate.

Table 2.3.1.: Harmonised long-term interest rates for convergence assessment purposes

The long-term interest rate statistics refer to the monthly average interest rates for long-term government bonds issued by the central government, quoted as percentages per annum.

The fourth Maastricht criterion is based on the level of long-term interest rates. Article 4 of the Protocol on the convergence criteria, as referred to in Article 121 of the Treaty, states that compliance with the fourth convergence criterion "shall mean that, observed over a period of one year before the examination, a Member State has had an average nominal long-term interest rate that does not exceed by more than 2 percentage points that of, at most, the three best performing Member States in terms of price stability. Interest rates shall be measured on the basis of long-term government bonds or comparable securities, taking into account differences in national definitions."

The European Central Bank and the European Commission have, together with the national central banks, identified the representative debt securities that can be used to measure long-term nominal interest rates and, if necessary, alternative long-term interest rate indicators where suitable government bonds are not available

Data until December 2006 refer to the yield to maturity on a reference long-term general government bond, issued in Slovenian tolar and with a nominal interest rate. Since 1.1.2007 the data show the yield to maturity on a basket of long-term general government bonds, issued in euro and with a nominal interest rate.

Until 2003 a yield to maturity on a primary market is presented, and afterwards a yield to maturity on a secondary market.

2.4: Monetary Financial Institutions Interest Rates

Data from January 2003–April 2005

Estimates on MIR statistics refer to interest rates on new business applied by the eight biggest resident banks (selected by balance-sheet-total criterion) to loans denominated in Slovenian tolar vis-à-vis domestic households and non-financial corporations.

Interest rates are calculated as a weighted average of all interest rates on new business in the instrument category.

Loans to non-financial corporations (breakdown by amount category): loans in SIT are converted into EUR by the monthly average exchange rate and then classified according to amount up to and including EUR 1 million, or over EUR 1 million.

"Loans to households for other purposes" include only loans to sole proprietors for current and capital assets.

Data on APRC in the period from January to August 2003 refer to six respondents, and from August 2003 to December 2003, to seven out of eight total respondents.

Data from May 2005–December 2006 covers business conducted in SIT by the total MFI population in Slovenia.

MFI interest rate statistics cover those interest rates that resident monetary financial institutions (MFIs, i.e. "credit institutions") apply to euro-denominated deposits and loans by households and non-financial corporations which are residents of the euro area.

The legal requirements for MFI interest rate statistics are laid down in Regulation ECB/2001/18, which defines the statistical standards according to which monetary financial institutions must report their interest rate statistics. This regulation is complemented by the Manual on MFI Interest Rate Statistics, which further clarifies and illustrates the statistical requirements. The MFI interest rate statistics refer to the interest rates individually agreed between a credit institution or other institution and its customer. They are converted to an annual basis, taking into account the frequency of interest payments, and are quoted in percentages per annum. At the euro area level 45 interest rate indicators with the corresponding volumes are collected, of which 31 refer to new business and 14 to outstanding amounts.

Outstanding amounts are defined as the stock of all deposits placed by customers, i.e. households and non-financial corporations, with credit institutions or other MFIs, and the stock of all loans granted by credit institutions to customers. An interest rate on outstanding amounts reflects the weighted average interest rate applied to the stock of deposits or loans in the relevant instrument category in the time reference period. Interest rates on outstanding deposits cover all deposits placed and not yet withdrawn by customers in all periods up to and including the reporting date. Interest rates on outstanding loans cover all loans used and not yet repaid by customers in all periods up to and including the reporting date, although excluding bad loans and loans for debt restructuring at rates below market conditions. MFI interest rates on outstanding amounts are hence statistics on the interest rates actually applied to all "open" deposits and loans.

New business is defined as any new agreement between the household or non-financial corporation and the credit or other institution. New agreements comprise all financial contracts, the terms and conditions of which specify for the first time the interest rate on the deposit or loan, and all new negotiations of existing deposits and loans. The prolongation of existing deposit and loan contracts which are carried out automatically, i.e. without any active involvement of the household or non-financial corporation, and which do not involve any renegotiating of the terms and conditions of the contracts, including the interest rate, are not considered new business.

The annual percentage rate of charge (APRC) is an effective lending rate that covers the total cost of credit to the consumer, i.e. the interest payments as well as all other related charges. It covers the total cost of credit to the consumer, as defined in Article 18(2) of the Consumer Credit Act. Charges defined in Article 18 of the Consumer Credit Act are excluded. APRC is compiled only for consumer credit and loans to households for house purchases (sole proprietors excluded).

Weighting method: The interest rates on new business are weighted by the size of the individual agreement.

The new interest rate statistics replace the average bank interest rates published by the Bank of Slovenia. The coverage and definition of the new statistics differ substantially from those previously published. Therefore, a direct comparison of the new and old rates is not possible.

* Households = sole proprietorships + individuals + non-profit institutions serving households

**APRC data includes households without sole proprietorships and without non-profit institutions serving households

Note 1: For this instrument category, new business and outstanding amounts coincide.

Note 2: For this instrument category, households and non-financial corporations are merged and shown under the household sector.

Exchange rates (Tables 2.6.1–2.6.2)

Table 2.6.1: Selected Bank of Slovenia Exchange Rates – Average Rates to 31.12.2006

These tables show the Bank of Slovenia middle rates until 31 December 2006. Annual rates are computed as arithmetical averages of monthly rates. Monthly averages are computed as arithmetical averages of daily rates (Sundays and holidays excluded).

A new currency, the Croatian kuna (= 1,000 former Croatian dinars) was introduced on 30 May 1994.

The Polish zloty was denominated on 1 January 1995 at the exchange rate of 1 new zloty for 10,000 old zlotys.

Table 2.6.2: European Central Bank exchange rates

Reference exchange rates of the European Central Bank are shown, representing middle exchange rates of the Bank of Slovenia. The average yearly and monthly exchange rates are calculated as the arithmetical average of daily exchange rates, excluding days on which the TARGET system was closed. This includes Saturdays, Sundays and the following holidays: New Year's Day (1 January), Good Friday, Easter Monday, Labour Day (1 May), Christmas (25 December) and 26 December.

Conversion rates between the euro and the currencies of EU Member States that have adopted the euro are irrevocably fixed and valid since 1 January 1999 (since 1 January 2001 for the Greek drachma).

The conversion rate for the Slovenian tolar is valid as of 1 January 2007, the conversion rate for the Cyprus pound and Maltese lira as of 1 January 2008 and the conversion rate for the Slovak koruna as of 1 January 2009.

1 EUR =	40.339900	BEF

Payment systems (Tables 2.7 to 2.13)

General

Data prior to 2007 are published in tolar; from 2007, data are published in euros.

Due to rounding in Tables 2.11 to 2.15, sums of quarterly data do not always totally comply with relevant yearly data.

Table 2.7: TARGET2 and SEPA internal credit transfer (SEPA IKP) transactions

Note 1: On 1st January 2007 the transaction limit for payments submitted to the Giro Clearing system (multilateral net system for small value payments), raised from EUR 8.354,21 to EUR 50.000.

Note 2: SEPA internal credit transfer system (the SEPA IKP) is operated by the clearing company Bankart d.o.o. SEPA IKP system was established on 4 March 2009. Before SEPA IKP establishment the same transactions were processed in Giro Clearing payment system, operated by Banka Slovenije. Giro Clearing payment system was closed down on 1 August 2009. Data regarding transactions in the Giro Clearing payment system are published until March 2009. Data regarding transactions in both systems are published together (the sum of transactions in the Giro Clearing and SEPA IKP systems) for the period from March to July 2009. Data regarding payments in the SEPA IKP system are published from August 2009 on.

Note 3: Until 29th December 2006 payments data on domestic payments between Slovenian participants are published for domestic Slovenian RTGS system (values in billion Slovenian tolar). As of 1st January 2007 domestic payments of Slovenian TARGET participants represents payments sent from Slovenian credit institutions to another Slovenian payment institution, direct participated in the TARGET system.

As of 19th November 2007 payments in TARGET 2 system are considered.

Note 4: As of 1st January 2007 cross-border payments of Slovenian TARGET participants represents payments sent from Slovenian credit institutions to non-Slovenian credit institutions, direct participated in the TARGET system.

As of 19th November 2007 payments in TARGET 2 system are considered.

Note 5: Gross value is the total value of all payment orders executed in the payment system.

Note 6: Net value is the amount required for the settlement of the gross value of payments in a payment system that uses netting. It represents the sum of the net monetary liabilities of all participants of the payment system to other participants of the payment system, calculated as the positive difference between the payment orders sent to the system and the payment orders received from the system for each participants of the payment system in an individual settlement cycle.

Table 2.8 Payment Cards

Note 1: Credit card: A card indicating that the holder has been granted a line of credit. The credit granted may be settled in full by a specific date each month (delayed debit card, i.e. charge card), or may be settled in part, with the balance taken as extended credit (credit card).

Note 2: Debit card: A card which enables the holder to have purchases directly charged to funds on the cardholder's bank account.

Note 3: Cards issued abroad: Payment cards issued abroad and used for payments in Slovenia, mostly by non-residents.

Note 4: Volume and value of transactions abroad: Use of cards issued in Slovenia for payments abroad.

Number of payment cards in circulation: Number of valid payment cards held by residents and non-residents issued in Slovenia. Data refer to the end of each quarter/year.

Number and value of payments refer to the use of payment cards in each quarter/year.

Domestic card: Payment card issued by banks and enterprises resident in Slovenia without licence agreements with foreign issuers.

Licence card: Payment card issued by banks and enterprises resident in Slovenia under licence agreements with foreign issuers.

Bank card: Payment card issued by banks.

Retailer card: Payment card issued by non-banking institutions, mostly for use at specific retail outlets.

Personal card: Payment card issued to a natural person (family cards included).

Business card: Payment card issued to a legal entity.

Table 2.9 Other Payment Instruments and Innovative Payment Schemes

Note 1: Data refer to the end of each quarter.

Note 2: Prior to 2007 the data refer to payment transactions and money withdrawals at manual POS and EFT POS terminals in Slovenia. From 2007 on, the data on money withdrawals are not included.

Table 2.10 Electronic Banking

Note 1: Only debt transactions are included.

Table 2.11 Credit Transfers

A paper-based order is a payment instrument related to a credit or debit transfer, in which the payer submits an order on a paper-based form. In case of credit transfer it means any instruction by an account holder to his payment service provider requesting the transfer of funds from his account to another account (also between accounts of the same account holder). Includes submissions by telefax if they require manual intervention in order to be transformed into electronic payments.

Special payment order is a special form of paper-based payment order, which is issued by a payee (beneficiary) to be paid by the debtor. The special payment order is presented by the payer at the bank, which then debits his transaction account and transfers the amount to the account of the payee, potentially via several other credit institutions as intermediaries and/or one or more payment and settlement systems. A contemporary form can assure automated processing with ICR technology (Intelligent Character Recognition) or classic manual processing.

A non-paper-based credit transfer is any credit transfer which the payer submits without the use of paper forms i.e. electronically. Includes submissions by telefax or other means if they are transformed into electronic payments without manual intervention.

A standing order is a non-paper-based credit transfer and means an instruction from a payer to his bank to make a regular payment of a fixed amount to a named creditor. The payer authorises his bank (the bank at which he maintains a transaction account) to pay a specified amount regularly to another account. The payment must be repeated at least five times. The execution of payments occurs under exact conditions on a particular day of the month.

Direct credit is special form of payment instrument related to a credit transfer, initiated by the payer, which enables a cashless fund transfer from payer to payee. Direct credit is used for the execution of small value payments, e.g., salaries, pensions, dividends and similar payments, to a large number of creditors.

Table 2.12 Debit Transfers

Direct debit is an authorised debit on the payer's bank account initiated by the payee. It is a payment instrument consisting of automatic debiting of the debtor's account for goods and services delivered by the creditor. The debtor (payer) authorises his bank to transfer funds from his bank account to the creditor's account and the creditor to submit a payment order to the creditor's bank to be paid. A typical example is an electricity bill payment.

A special money order is a standardised paper-based debit instrument used to remit money to the named payee. A special money order is issued by a bank, allowing the individual named on the order form to receive a specified amount of cash on demand.

Table 2.13: Network of Commercial Banks

Note 1: Statistical regions, source: Statistical Office of the Republic of Slovenia, 31 March 2000.

Map of Slovenia by Geodetic Institute of Slovenia

Note 2: Data referring to the Post Bank of Slovenia do not include units of the Post of Slovenia that operate for the Post Bank of Slovenia on a contractual basis.

3. BALANCE OF PAYMENTS AND EXTERNAL POSITION**Balance of Payments****General notes**

In most respects the Slovenian Balance of Payments (BOP) conforms to the methodology of the IMF's Balance of Payments Manual, fifth edition (1993).

Characteristics of the Data

Minus sign (-) indicates imports or surplus of imports over exports in the current account, increase in assets or decrease in liabilities in the capital and financial accounts, and growth of reserve assets.

Data on transactions are converted from the original currencies to EUR using the daily Bank of Slovenia or ECB's exchange rates, or average exchange rates for the period if the exact date of transaction is not known.

Revision policy

Revision of balance of payments, the international investment position and gross external debt data occur as follows:

Revisions in **monthly data** are published with the release of:

- the following month's data;
- the corresponding quarterly data;
- the corresponding revised quarterly data;
- the international investment position and external debt data for the corresponding year; and
- the revised international investment position and external debt data for the corresponding year.

Revisions in **quarterly data** are published with the release of:

- the following month's data;
- the data on the following quarter;
- the international investment position and external debt data for the corresponding year; and
- the revised international investment position and external debt data for the corresponding year.

Revisions for the **annual** balance of payments, international investment position and external debt data are published with the release of the data for the following years.

Annual data are revised for the year t-1 and t-2. In the case of major methodological changes or discrepancies among the data sources, data for the year t-3 will be revised as well.

Data sources

- **The external trade statistics (Statistical Office of the Republic of Slovenia)** is the main source of data on trade in goods. Since 1 May 2004, the source of data on trade in goods among Slovenia and EU Member States is the Intrastat reporting. The source of data on trade in goods with other countries is the single administrative document (Extrastat reporting).
- **Reports on account balances and transactions between residents and non-residents (C, PPT, PPV):**
 - report on account balances at domestic banks – PPV (until 31 December 2004),
 - report on account balances abroad – C (until 31 December 2006),
 - report on transactions through accounts at domestic banks – PPT (until 31 December 2008),
 - report on transactions through accounts abroad – C (until 31 December 2008).

All banks which conducted international payment transactions and all residents with open accounts abroad were obliged to report. The resident issuer/beneficiary of the payment was obliged to forward data on the type of transaction. Since 2009 only banks which conduct international payment transactions report transactions with nonresidents that exceed threshold EUR 50.000. Data are used for quality control purposes only.

- **Reports on trade in services, part of trade in goods and on current/capital transfers with nonresidents (BST)** are the sources of data on services (excl. travel), data on coverage adjustments of goods item and data on current and capital transfers (excl. transfers with EU budget) from 2008 onwards.
- **Reports on transactions with securities (VRP) and data from the Securities Clearing Corporation (KDD)** are the sources of portfolio investments (debt and equity securities) and financial derivatives since 2004.
- **Reports on purchased/sold foreign debt securities without domestic brokers (DVP)** are the sources of portfolio investments in foreign debt securities, carried out without domestic brokers, from 2007 onwards.
- **Data regarding drawn/un-drawn credit transactions from foreign credit registration forms (KR)** are the source of data on loans of all sectors until 2004; in 2005 and 2006 they are only the source for the non-banking sector. A registration was obligatory for all financial credits and long-term commercial credits; since 1997 from the same source are also obtained the data on the purpose of direct payments of foreign lenders, used to settle the obligations of domestic borrowers to other non-residents.
- **Reports on monetary financial institutions (PORFI)** are the source for data on loans, cash and deposits of the banking sector since 2005.
- **Reports on credits received and granted and deposits with non-residents (KRD)** are the source for data regarding loans and deposit of all sectors, except banks, since 2007.
- **Reports on short-term receivables and liabilities from operations with non-residents (SKV)** are the source for short-term trade credits and advances since 2002.
- **Reports on investments (SN)** are until 2007 the source for reinvested earnings of direct investments. From 2008 onwards these reports are source also for all other direct investment transactions in equity and related income as well as for portfolio equity transactions without involvement of domestic dealers.
- **Accounting data of the Bank of Slovenia**
- **Accounting data of banks (KNB)**
- **Budget data on the transactions of government sector between the Republic of Slovenia and EU** (from 2004 onwards)

Quarterly data on financial account's statistics are source for financial derivatives for all sectors except the central bank (since 2007).

- **Estimates and other sources**
 - estimate of purchases of foreign currency and cheques from foreigners in exchange offices (part of the travel category) - until 2004,
 - estimate of expenditures on travel abroad including purchases of goods abroad - until 2004
 - estimate of Italian pensions (UMAR) until the end of 1998,
 - estimate of transactions with foreign currencies and the deposits of Slovene households (until 2006),
 - estimate of labour income (SURS),
 - data on pensions paid to non-residents (ZPIZ),
 - survey on the write-downs of debt from trade in goods and services abroad,
 - estimates for exports and imports of travel - from 2005 onwards (detailed explanation under item Travel),
 - estimate of cash transactions on tourism and labour income (from 2007 onwards),
 - quarterly data on consumption of foreign embassies in Slovenia (SURS, from 2008 onwards),
 - migrants' transfers - outflows (bilateral data between countries, from 2008 onwards),
 - households' transfers (SURS, from 2008 onwards),
 - assets acquired directly by tenders and programmes of EU (SURS, from 2008 onwards),
 - data on nonresidents' investments in real-estate in Slovenia (GURS, from 2008 onwards),
 - data on purchases/sales of real-estate in Croatia (Croatian National Bank, from 2008 onwards),
 - data on purchases/sales of emission allowances between residents and nonresidents (Slovenian Environment Agency, from 2008 onwards).

Current account

Goods

Data regarding general goods can be obtained from the Statistical Office of the Republic of Slovenia. Prior to Slovenia's accession to the EU data were available from standard customs documents. Since 1 May 2004, data are available from single administrative documents for trade in goods with non-EU countries and from Intrastat reports for trade with EU Member States.

Adjustments of CIF/FOB – data on import by CIF value were adjusted to FOB value with the help of a coefficient which is equal to the weighted average of coefficients between CIF and FOB values of the goods imported (in an available sample), separated with regard to type of goods, type of transport and partner's country. For 2004, a new CIF/FOB coefficient was calculated (1.0306); prior to that the coefficient was 1.0393. Since 2004 on, the coefficient is calculated every year based on a five year average.

Coverage adjustments - made for goods exported and imported without customs declarations (the ITRS source until 2007, the reports of duty free shops and consignment warehouses until 2005, BST reports as source from 2008 onwards). Since 1 May 2004, coverage adjustments also include estimated data on imports of motor vehicles from EU by natural persons not covered by Intrastat System.

Services

Transport

Transportation services are classified according to mode of transport and furthermore according to what is carried. The source of records on transportation services is the ITRS until 2007 and BST reports from 2008 onwards.

Travel - methodology until 2004

The ITRS sources used in the compilation of the "Incoming travel" category include: a.) health- and education-related services; b.) payments made by non-residents to Slovenian tourist agencies; c.) net withdrawals in tolar from non-resident accounts; d.) money spent in casinos by non-residents; e.) data on sales of goods to non-residents in duty-free shops and consignment warehouses; f.) payments with credit cards; and g.) sales of tolar to non-residents abroad.

The data on sales of tolar to non-residents in Slovenia are estimated based on the number of border crossings by foreign travellers and on the number of nights spent in the country by foreign tourists.

Data for the category "Expenditure on travel" come from the ITRS and estimations.

Travel - methodology since 2005 onwards

Main data sources to estimate the **export** of travel are the following surveys and researches conducted by Statistical Office of the Republic of Slovenia (SURS):

- Survey on foreign tourists in summer season is used to define the structure of foreign tourists according to their primary aim of travel (business travel, health care, education, other) and expenditures of each type of foreign tourists ; three-year's survey -last conducted in 2009)
- Survey on foreign travelers (to define the structure of travelers broken down by same-day travelers and transit travelers and their respective expenditures).
- Arrivals and over-night stays of foreign tourists broken down by countries of their residency (monthly survey).
- Number of border crossings (to define the population of foreigners entering Slovenia).

Based on data sources the following six categories of data are calculated and finally broken down by countries using data on mobile phone operators;

- Business travel,
- Health - related travel,
- Education,
- Other,
- Same- day travelers,
- Transit travelers.

Main data source to estimate the **import** of travel is SURS's survey TU_ČAP (Quarterly survey on travel of domestic citizens). The Survey provides the value of expenditures of domestic population traveling abroad (same - day trips and longer trips) and the amount spent for transportation to and from the foreign destination, which is then subtracted from total expenditures in order to avoid double counting (since it is already included in transport services).

Based on TU_ČAP data source the following five categories of data are calculated and finally broken down by countries using data on mobile phone operators;

- Business travel,
- Health - related travel,
- Education,
- Other,
- Same - day travelers.

Construction services

The source of data is the ITRS until 2007, all construction undertakings are recorded under construction services on net basis (the revenues earned on works performed abroad are recorded net of the corresponding expenditures). From 2008 onwards the sources of data on construction services are BST reports.

Insurance services

Premiums on life and non-life insurance are split into two components: (i) the service charge included in insurance services; and (ii) the premium in a narrow sense, recorded as a current transfer. The calculation of the service charge is based on a fixed percentage of premium payments. The source of data on insurance services is ITRS until 2007, this source was replaced by BST reports for 2008 data onwards. Insurance services include commissions of insurance companies and 45 % of premium payments. Insurance claims and other part of nonlife insurance premiums are included in current transfers, claims and part of life insurance premiums represent assets/liabilities of financial account.

Government services

All transactions settled through the accounts of Slovenian embassies abroad, as well as transactions coded as government services settled through the accounts of Slovenian banks with foreign correspondents, are included in this item until 2007 with the ITRS as the source of data. From 2008 onwards the source of data is BST report, government services include all services of slovenian representative bodies abroad. From the same year there are included data on consumption of foreign embassies in Slovenia. Data are provided by SURS (on the basis of taxation data).

Also for all other types of services the ITRS source has been discontinued as of 2008, when the new source (BST report) for data on trade in services (excl. travel) has been introduced.

Income

Labour income – receipts. Since 2002, data from the Labour Force Survey (SURS) and Eurostat data have replaced ITRS and estimates as sources of labour income for the work of Slovene residents abroad.

Labour income - expenditures. ITRS is the source for labour income - expenditures until 2004. Data relating to 2005 onwards are provided by SURS on the basis of Labour Office register for the number of nonresidents, who at the end of each quarter possess valid work permits and who actually worked in Slovenia less than one year and data by The Health Insurance Institute of Slovenia for nonresidents, who at the end of each quarter don't need valid work permits and who actually worked in Slovenia less than one year. Data on daily migrant workers from Austria, Italy, Hungary and Croatia are also included.

Since 2002, labour income (receipts and expenditures) is included according to the gross principle (including taxes and social contributions).

Capital income – Since 2004, VRP reports have replaced ITRS as a source for income from equity securities. Annual reports on capital investments are the source for data regarding reinvested earnings. Data on reinvested earnings in the current year are estimated - (a three year monthly average of actual data on total earnings, less extraordinary incomes [the source being annual reports on investments], is decreased by dividends and other incomes, paid in the current month (the source being monthly reports on investments from 1.1.2008 onwards, previously the source was ITRS). The estimate is replaced by actual data only when these data are available. Data on disproportionately large exceptional payments of profits relative to the recent level of dividends and earnings (superdividends) are excluded from income and included in direct investment as withdrawals of equity (from 2008 onwards). Until 2003, the source of income from debt securities was ITRS; since 2004 the sources are reports on securities transactions (VRP reports) and KDD data. Until 2004, the source on income from other investments was ITRS for the banking sector; the source was later changed to reports on monetary financial institutions (PORFI). Until 2006, the source on income from other investments for the non-banking sector was ITRS; since 2007, the source is KDD reports. Income from loans (including long-term commercial credits) and cash reserves have been managed according to the accrual principle since 2002; since 2007, total income from other investments is managed according to the same principle. Since 2004, the accrual principle is used for income from bonds and notes.

Current transfers

Current transfers of other sectors are subdivided into workers' remittances, insurance and other transfers. Current transfers of the government sector and other transfers of other sectors are from 2002 onwards subdivided into taxes, subsidies, social contributions, social benefits and other transfers. The main data sources are the ITRS and estimates until 2007, from 2008 onwards the sources are BST reports and from 2004 onwards, data on EU transfers of the government sector are obtained directly from the Ministry of Finance (budget data). Migrants' transfers - outflows (data provided by foreign central banks) and transfers of households (SURS survey) are included from 2008 onwards.

Capital and financial account

Capital account

Capital transfers

The ITRS is the source of data until 2007. Migrants' transfers cover not only payments recorded by domestic banks, but also the changes in residency of accounts held with these banks. From 2008 onwards data are obtained from BST reports, but data on capital transfers between the Republic of Slovenia and the EU are from 2004 onwards obtained directly from the Ministry of Finance (budget data). Since 2002, the Bank of Slovenia also estimates the value of write-downs of debt from trade in goods and services abroad. From 2008 onwards, there are also included data on assets acquired directly by tenders and programmes of EU (SURS, Annual survey on investment in tangible assets).

Financial account

Direct investment

Direct investment is until 2007 recorded on the basis of reported payments through domestic banks and data from customs declarations, from 2008 the source is direct monthly report SN. Data on reinvested earnings are based on yearly surveys on balance and transactions with affiliated enterprises (SN) and are included monthly as one-twelfth of the yearly figure. Data regarding reinvested earnings for the current year are estimated. Until 1997, the purchase and sale of all shares and equity were included in this item. Data on disproportionately large exceptional payments of profits relative to the recent level of dividends and earnings (superdividends) are included in direct investment as withdrawals of equity (from 2008 onwards).

From the beginning of 1997, purchase and sale of shares that assure more than 50 percent of a company's equity (a controlling interest of shares) and shares issued by domestic companies on the primary markets with the purpose of increasing the nominal capital of the company are included in this item, due to capital control measures. With the new Foreign Exchange Act in 1999, the 10% rule is applied to direct investment. Data of Surveying and Mapping Authority of the Repub-

lic of Slovenia on nonresidents' investments in real-estate in Slovenia are included from 2008 onwards. From the same year data on Slovenian residents' purchases/sales of real-estate in Croatia are included (data source is Croatian National Bank).

Since 2001, there is a break in the data series in the category "Direct Investments - Other Capital". Since that time, loans and long-term commercial credits between affiliated companies (10% or more of capital share) are included in this category. Until 2000, these types of transactions were included in the category "Other Investments". Since 2002, the category "Direct Investments - Other Capital" also includes short-term commercial credits between affiliated companies.

Since 2005 other capital claims / liabilities does not include banking sector's claims/liabilities with direct investment relationship (these data are included in item other investment/loans).

Portfolio investment

Transactions are divided into assets and liabilities, with further breakdown into equity and debt portfolio investment. Until 1997 only data on sales and purchases of debt securities through banks were included in this item. Since February 1997 the equity securities with the exception of direct investment are included in this item too. With the new Foreign Exchange Act in 1999, portfolio investment transactions include all transactions below the 10% rule. Equity portfolio investment to individual sectors is subdivided into mutual funds and other investment. VRP and KDD data are the main sources from 2004 onwards. Since 2007 on this item includes also assets of debt portfolio instruments held by Bank of Slovenia, which are no longer considered as international reserves, but as claims to EMU member states and claims in EUR currency to all other nonresidents. From 2007 onwards data on transactions in assets of foreign debt instruments that occur without involvement of domestic dealers are collected on a report DVP, and from 2008 onwards assets and liabilities in portfolio equity investments deriving from transactions without involvement of domestic dealers are collected on report SN.

Financial derivatives

From 2004 until 2006 these types of transactions are included in VRP and KDD sources. Since 2007 quarterly data on financial account's statistics are source for financial derivatives for all sectors except the central bank. From 2009 onwards financial derivatives of Bank of Slovenia are included in other investment/financial derivatives item or international monetary reserves item (depending on the residency of the counterpart).

Other investments

Short-term trade credits

Until 2002, short-term trade credits were estimated based on the following calculation:

- [(export of goods FOB + coverage adjustments - (export payments + free export of goods + direct investments in goods + drawings of granted long-term trade credits))]
- [(import of goods FOB + coverage adjustments - (import payments + free import of goods + direct investments in goods + drawings of received long-term trade credits))]

Since 2002, short-term commercial credits and advances are included based on SKV reports. Short-term trade credits between affiliated companies are included in direct investments.

Loans and long-term trade credits

From 2001 onwards, inter-company debt transactions between affiliated enterprises (10% or more capital share) are not recorded as loans, but are recorded as direct investment – other capital transactions. Loans (including long-term trade credits) and related income have been calculated according to the accrual principle from 2002 onwards, and according to the cash principle prior to 2002. From 2005 onwards claims/liabilities of banking sector regardless of capital affiliation to nonresidents are included in this item (the direct investment relationships are not distinguished in the data source).

Currency and deposits

Until the adoption of Euro currency (1.1.2007) the foreign currency of residents is estimated based on the following formula: deposited currency and cheques on foreign currency accounts of individuals - withdrawals of cash and cheques from foreign currency accounts of individuals + the estimated net purchase of foreign currency by residents + estimated expenditures for tourist travel abroad + estimated expenditures of tourist travel to the former Yugoslavia + the estimated purchase of goods abroad - estimated labour expenditures abroad - estimated Italian pensions (until the end of 1998) + net withdrawals from non-resident accounts in local currency + the change of deposit balances of residents on accounts at BIS Member State banks (before 2002).

From the adoption of Euro currency (1.1.2007) onwards item foreign currency of households is estimated by using data on net inflows of foreign currency from tourism, data on net income on compensation of employees (decreased by consumption abroad/in the economy) and BIS (Bank for International Settlements) data on deposits held by residents with the banks abroad.

Since 2002, the category "Accounts Abroad of Other Sectors" also includes BIS data regarding deposits of residents on accounts at BIS Member State banks.

With adoption of EUR in 2007 as a national currency Slovenia became a member of EMU which affects the following changes in currency and deposits item;

- the item currency and deposits/ claims includes also estimated counterpart of the transactions in cash in current account of the balance of payments (tourism and labour income),
- claims of the Bank of Slovenia to EMU member states and all claims in EUR currency to all other states are included in the item currency and deposits/ claims.
- net position of the Bank of Slovenia to the Eurosystem (net result of incoming and outgoing payments conducted in EUR currency through TARGET and STEP2 system) is included in the item currency and deposits/ other liabilities.

International monetary reserves

Reserve assets and related income have been calculated according to the accrual principle from 2002 onwards, and according to the cash principle prior to 2002.

Following Slovenia's entry to the EMU in 2007, claims to other residents of the euro area (denominated in euros and in other currencies) and claims in euros to EMU non-residents are not included in reserve holdings. From 2007 onwards, these transactions are shown in the appropriate categories of the capital and financial account sector of the Bank of Slovenia (investments in securities and other investments).

International monetary reserves item includes also financial derivatives (from 2009 onwards).

Table 3.1: Balance of Payments 1988–1993

The balance of payments is based on the methodology of the International Monetary Fund (Balance of Payments Manual, IMF, 1993). The balance of payments for the period 1998 - 1991 does not include transactions with republics of the former Yugoslavia. The import and export of goods is shown without processing transactions, processing is included in services.

Note 1: For 1988 and 1989, official sector data is included in "Other sectors".

Note 2: For 1988 through 1990, "Statistical errors" include sales of claims from bilateral agreements to the former National Bank of Yugoslavia and its purchases of foreign currency through Slovenian foreign currency exchange offices.

Note 3: Reserve assets of the Bank of Slovenia.

Table 3.2: Balance of Payments

The data for the current year are revised monthly. Data become final according to the revision practice (see revision practice).

In June 2001, Slovenia acquired a 16.39% share in the holdings of the former Yugoslavia with the Bank for International Settlements (BIS), consisting of gold SIT 16.9 mio (EUR 77.8 million), foreign currencies SIT 1.1 mio SIT (EUR 5.3 million) and shares SIT 3.0 mio (EUR 13.8 million). This transaction is not considered to be a flow of the balance of payments, but rather a part of the "Other changes" category, which reconciles the international investment position in consecutive periods.

* Years 1994 in 1995: Data for balance of payments in ECU for years 1994 and 1995 are not obtained in the same manner as data for other years. The data for merchandise trade are converted from US dollar to ECU using average monthly exchange rates. The data for merchandise trade in Euros or ECU since 1996 are computed from values in original currencies using daily exchange rates for Euro or ECU.

Note 1: Exports and imports of goods - f.o.b. parity

Note 2: June 1996: Includes the issue of government bonds in exchange for a part of allocated foreign debt in the amount of SIT 63.7 mio (EUR 374.9 million). Banks' liabilities under foreign loans are decreased for the same amount and transferred to "Liabilities to government".

Note 3: Issues of eurobonds:

- August 1996 (EUR 253.7 million)
- June 1997 (EUR 205.1 million)
- May 1998 (EUR 500.0 million)
- March 1999 (EUR 400.0 million)
- March 2000 (EUR 400.0 million)
- February 2001 (EUR 100.0 million)
- April 2001 (EUR 450.0 million)

Issues of government bonds since 2007:

- March 2007, SLOVEN4 (EUR 1000.0 million)
- February 2008, RS63 (EUR 1000.0 million)
- February 2009, RS64 (EUR 1000.0 million)
- March 2009, RS65 (EUR 1500.0 million)
- September 2009, RS66 (EUR 1500.0 million)
- January 2010, RS67 (EUR 1500.0 million)
- March 2010, RS68 (EUR 1000.0 million)
- January 2011, RS69 (EUR 1000.0 million)
- March 2011, RS70 (EUR 1000.0 million)

Note 4: For 1993–2001, short-term claims include net changes in commercial credits (received and granted). From 2002 onwards, short-term commercial credits are included on the basis of SKV reports on the assets and liabilities side of the balance of payments. Short-term commercial credits between affiliated enterprises are included under the heading "Direct investments", while other commercial credits are included in "Other investments/trade credits".

Note 5: Includes mostly Bank of Slovenia fiduciary accounts. In June 1996 the amount of 21.2 mio SIT (EUR 124.9 million) was transferred to regular Bank of Slovenia reserve accounts.

Note 6: Use of IMF credit (assumed upon membership in January 1993).

Note 7: Reserve assets of the Bank of Slovenia. Following Slovenia's entry to the EMU in 2007, claims to other residents of the euro area (denominated in euros and other currencies) and claims in euros to EMU non-residents are not included in reserve holdings. From 2007 onwards, these transactions are shown in the appropriate categories of the capital and financial account sector of the Bank of Slovenia (investments in securities and other investments). More explanation is available in: "The statistical treatment of the international monetary reserves at the entry of Slovenia to the euro area" (slovenian), in the chapter Methodological information on the internet page: <http://www.bsi.si/en/financial-data.asp?Mapald=64>.

Note 8: The data on reinvested earnings for 2011 are not yet available. Therefore, the balance of payments includes an estimate (from the three year monthly average for the period 2008 to 2010 of actual data on total earnings less extraordinary incomes [the source being annual reports on investments], less dividends and other incomes paid in the current month). In 2012, the estimate will be replaced with actual data on reinvestment of earnings; the estimate for 2012 shall take into consideration the new three year average (2009 to 2011).

Note 9: From 2001 onwards, there is a time series break in the categories "Direct investment" and "Loans". From 2001, inter-company debt transactions between affiliated enterprises (10% or more capital share) are included in the "Direct investment" category; before that they were included under the heading "Loans". Since 2002, the category "Direct investments" also includes short-term trade credits between affiliated enterprises.

Note 10: Transfers from the EU budget since 2004 have been recorded as either current or capital transfers, according to the nature of their use. Data are provided by the Ministry of Finance.

Note 11: In the balance of payment of Slovenia to the EMU the presentation of the category net of errors and omissions does not make sense.

Tables 3.3 and 3.4: Current account and capital and financial account by countries

The tables show the main categories of current and capital and financial account of the balance of payments, by countries, for the last available year. The most important countries and/or groups of countries are shown.

Table 3.5.: Trade in goods by countries

The data source is the Statistical Office of the Republic of Slovenia (external trade statistics). Import is valued at FOB parity; export is valued at CIF parity.

International Investment Position of Slovenia

General notes

The international investment position is the balance sheet of the stock of external financial assets and liabilities. The financial items that constitute the position consist of claims on non-residents, liabilities to non-residents, monetary gold and SDRs.

The methodology of the international investment position (IIP) of Slovenia is based on the fifth edition of the Balance of Payments Manual, IMF, 1993. The manual distinguishes four sectors – monetary authorities, general government, banks and other sectors.

The structure of the statement is similar to the balance of payments (financial account): here as well are holdings and liabilities, first classified by instruments, followed by sectors and finally by maturity. The change to the balance of holdings and liabilities in a specific period is the result of transactions or flows shown in the balance of payments and also exchange rate changes, price changes and other changes.

Revision policy

See note "Revision policy" in the section "Balance of Payments".

Data sources

Data sources for the international investment position of Slovenia are mainly the same as those for the financial account of the balance of payments.

Direct investment

Data on direct investment are collected from:

- concessional surveys on equity investment (SN),
- reports on loans granted to or received from non-residents (KR) - until 2006,
- reports on accounts abroad (C) - until 2006,
- short-term commercial credits with non-residents (SKV), and
- assets and liabilities in loans and deposits to nonresidents (KRD) for non-bank sectors since 2007.

In accordance with the recommendations of the IMF, this item comprises investment where the direct investor owns 10% or more of ordinary shares or voting power. Equity shares are until 2006 valued at book value according to accounting standards. From 2007 the equity of listed companies is recorded according to market value and equity of unlisted companies is recorded according to book value in line with accounting standards. Reinvested earnings are included. Data of Surveying and Mapping Authority of the Republic of Slovenia on nonresidents' investments in real-estate in Slovenia are included from 2008 onwards.

Claims on and liabilities to affiliated enterprises are included in the category "Direct investment–other capital". Intercompany claims or liabilities between affiliated banks and affiliated financial intermediaries recorded under direct investment capital are limited to those associated with permanent debt (loan capital representing a permanent interest). Until 2000, all long-term intercompany claims were considered liabilities between affiliated banks, and affiliated financial intermediaries were included in this item as well as permanent debt. From 2005 onwards other capital item of direct investment does not include claims/liabilities of banking sector to affiliated enterprises (those data are included in item other investment/ loans).

Data on claims and liabilities of Slovene enterprises in indirectly-affiliated enterprises from 1996 onwards are included in the category "Direct investment abroad" (in cases where an enterprise abroad having Slovene direct investment holds 10% or more equity in another foreign enterprise). In the category "Direct investment in Slovenia", data on the investment of foreign enterprises in indirectly-affiliated enterprises in Slovenia are included (in the case that a Slovene enterprise with foreign direct investment holds 10% or more equity in another Slovene enterprise). From 2007 all claims and liabilities to foreign direct investors/ direct investment enterprise and fellow companies that belong to the same foreign direct investor / direct investment enterprise are included.

Portfolio investment

Until 2002, data on equity securities and other equity shares were available from enterprises' surveys (form SN), but only data from surveys where the direct investor owns less than 10% of ordinary shares or voting power are included. (In the balance of payments, transactions with equity securities and other shares are collected from the ITRS [see note to tables 3.1–3.4] /Capital and financial account/Portfolio investment.) From 2007 data on equity shares below 10% that are traded without involvement of domestic dealers are collected (report SN).

From 2003 onwards, data from the reports VRP (operations in securities reported by brokerage houses, banks and investment companies) and KDD (Central Securities Clearing Corporation) are included. Also data on investments in mutual funds and investments of households in other equity securities are available since 2003. From 2007 data on assets of foreign debt securities that are traded without involvement of domestic dealers are collected (report DVP).

Data on residents' holdings of debt securities are available from VRP direct reports.

Liabilities of debt securities of the government, banking and other sectors are available from credit registration and Central Securities Clearing Corporation data (KDD). For domestic securities issued abroad, the source is VRP reports.

Financial derivatives

From 2004 until 2006 these data are included in VRP and KDD sources. Since 2007 quarterly data on financial account's statistics are source for financial derivatives for all sectors except the central bank. From 2009 onwards financial derivatives of Bank of Slovenia are included in other investment/financial derivatives item or international monetary reserves item (depending on the residency of the counterpart).

Trade credits and loans

The source for short-term trade credits is a report of enterprises on the stock of external assets and liabilities (form SKV).

Until 2006 sources for long-term trade credits and loans are credit registration forms (forms KR) and from 2007 onwards statistical reports on assets and liabilities in loans and deposits to nonresidents for non-bank sectors (forms KRD) and are the same for the international investment position and the balance of payments. Until 2000, the balance of payments did not distinguish loans between affiliated companies from loans between unaffiliated companies and included all loans in other investment items.

From 2005 onwards monetary statistics (PORFI) is the source for banking sector data (claims and liabilities are included regardless of direct investment affiliation).

Currency and deposits, other assets, other liabilities and reserve assets

For these categories, the sources largely coincide with the sources for the balance of payments:

- the accounting data of commercial banks (KNB) - until 2004,
- the account balances of banks in original currencies (PPV) - until 2004,
- the account balances abroad of companies (C) - until 2006,
- assets and liabilities in loans and deposits to nonresidents (KRD) for non-bank sectors since 2007
- the source for banking sector data (PORFI) - since 2005,
- the accounts of the Bank of Slovenia.

In the International Investment Position, mature, unpaid loans and long-term commercial credits are included in other holdings and liabilities as short-term items. These transactions are not included in the balance of payments.

Until 2002, there is a difference between the International Investment Position and the balance of payments for other liabilities and holdings of other sectors, where contractual joint ventures are shown in the investment position. The source for this item is a JV report.

The International Investment Position includes data of the Bank for International Settlements (BIS) on deposits of local residents at BIS Member State banks. Since 2001, an estimate of the balance of foreign currency held by households is also included. However, any further investments of foreign currencies (primarily investments in real estate abroad and foreign securities, without domestic brokers) are not excluded from this estimate, since data of this type are not available.

Net position of the Bank of Slovenia to the Eurosystem (net result of incoming and outgoing payments conducted in EUR currency through TARGET and STEP2 system) is also included in the item liabilities/currency and deposits.

Table 3.6: International Investment Position of Slovenia

IIP data do not include:

- data on real estate owned by Slovenian households abroad (mainly real estate in Croatia); from 2001 onwards, these data are partially included under the heading "Assets/other investment/currency and deposits/households"; and
- claims on other countries in the territory of the former Socialist Federal Republic of Yugoslavia, subject to negotiations on succession (except the part reported by the Fund of the Republic of Slovenia for Succession from 2001 onwards), expropriated assets in these territories and other assets transferred to the Slovenian government during the process of privatization. In December 2006 claims subject to succession to former Yugoslavia were revalued and 'Skld RS za sukcesijo' was transformed into 'Javna Agencija Republike Slovenije za nasledstvo'.

Additional data on direct investment are available in a special publication of the Bank of Slovenia: "Neposredne naložbe – Direct Investment", and on the Bank of Slovenia Web site: http://www.bsi.si/iskalniki/ecb_en.asp?Mapald=714.

Table 3.7: International Investment Position by countries

The table includes data for the last available year by countries in which Slovenes invest (in holdings) and includes data from which countries foreigners invest in Slovenia (in liabilities). The most important countries and/or groups of countries are shown.

Gross External Debt

General notes

The methodology is based on External Debt Statistics: Guide for Compilers and Users, IMF, 2003. The guide is available at the following Web address: <http://www.imf.org/external/pubs/ft/eds/Eng/Guide/index.htm>.

Revision policy

See note "Revision policy" in the section "Balance of Payments".

Data sources

In order to maintain consistency, the data sources are the same as those for the International Investment Position. The sources for equities and financial derivatives are not used because these types of instruments are not included in the balance of external debt according to the IMF definition.

Tables 3.8 and 3.9: Net External Debt

The tables present gross external debt, gross external assets in debt instruments, and net debt position. The data are the same as presented in the international investment position (IIP). In the table "Net External Debt", data are sorted by sectors, maturities and instruments; in the table "International Investment Position", data are sorted by instrument, sectors and maturities.

Tables 3.10 and 3.11: Gross External Debt

Gross external debt, at any given data, is the outstanding amount of those current, and not contingent, liabilities that require payment(s) of principal and/or interest by the debtor at some point(s) in the future and are owed to non-residents by residents of an economy. The types of financial instruments included in the presentation of the gross external debt position are as follows: debt securities (money market instruments, bonds and notes), trade credits (short- and long-term), loans (short- and long-term), cash, deposits and other debt liabilities. Maturity of debt liabilities is based on the formal criterion of original maturity. Long-term debt is defined as debt with an original maturity of more than one year or with no maturity stated. Short-term debt, which includes cash, is debt repayable at notice or with an original maturity of one year or less.

International reserves

Table 3.12.: International reserves

Until December 2006, the Bank of Slovenia's foreign exchange reserves included convertible foreign currencies, deposits abroad and first-class securities of foreign issuers.

From 1 January 2007, the Bank of Slovenia's foreign exchange reserves include convertible foreign currencies, deposits in foreign currencies outside the euro area and first-class securities in foreign currencies of issuers outside the euro area. The decline of value presented in the data is due to Slovenia's inclusion in the EMU.

Since 2009 foreign exchange reserves of the Bank of Slovenia include also positions on financial derivatives based on daily pricing of these instruments. The value of financial derivatives may also be negative.

4. PUBLIC FINANCE

General

Data prior to 2007 are published in tolar; from 2007, data are published in euros. Quarterly and yearly data on Gross domestic product are not yet reconciled.

General - methodology ESA 95

Non-financial and financial data are prepared in compliance with the European System of Accounts from the year 1995 (ESA 95). This methodology was adopted by Council Regulation (EC) No. 2223/96 of 25 June on the European System of Accounts in the Community.

ESA 95 methodology is the central economic methodology of each EU member state and therefore ensures comparability of data.

Data on non-financial accounts of general government are prepared by the Statistical Office of the Republic of Slovenia. In accordance with a memorandum of understanding between the Ministry of Finance, the Bank of Slovenia and the Statistical Office of the Republic of Slovenia, the data on financial accounts are compiled by the Bank of Slovenia.

The data on financial accounts are consolidated.

Table 4.1: Non-financial and Financial Accounts (ESA 95) of the General Government sector

EDP debt is gross debt as defined in the Maastricht treaty. It comprises general government liabilities in the form of currency (coins), deposits, debt securities (securities other than shares and other equity) and loans only.

Tables 4.2 and 4.3: Non-financial Account of the General Government sector

Fiscal burden is a sum of the direct taxes, indirect taxes, social contributions and capital taxes.

Intermediate consumption consists of the value of the goods and services consumed as inputs by a process of production. The goods and services may be either transformed or used up by the production process.

Tables 4.4 and 4.5: Financial Account of the General Government sector

Change in EDP debt is a difference between the current and preceding EDP debt figure.

Deficit-debt adjustment (DDA) is a sum of the deficit/surplus of non-financial account and change in EDP debt. DDA can be also calculated as a sum of the difference between financial assets and liabilities (which are not included in EDP debt) and other flows.

Other liabilities consist of data, which are not included in the EDP debt: financial derivatives, shares and other equity, insurance technical reserves and other liabilities.

Other flows are sum of the statistical discrepancy (difference between deficit/surplus of non-financial and financial account) and changes of the debt which are not transactions (foreign exchange holding gains and losses, other valuation effects, other changes in volume of debt).

Borrowing requirement consists of a negative deficit/surplus of financial account plus financial assets minus financial liabilities.

Table 4.6: Revenues and Expenditures of the General Government

Note 1: The data of the current and previous year are revised monthly until the data on the previous year become final.

Note 2: Total revenue excludes receipts from the EU, and likewise, total expenditure excludes payments to the EU budget.

Note 3: Current expenditure also includes social security contributions (besides of the expenditures on goods and services, interest payments, current reserves and current transfers).

Tables 4.7: Lending, Repayments and Financing of the General Government

General government operations (consolidated state budget, local governments, pension fund and health insurance fund).

Note 1: The data of the current and previous year are revised monthly until the data on the previous year become final.

Table 4.8: Central budget debt

The Republic of Slovenia is defined as a legal person. The data from tables 4.6., 4.7. and 4.8. originate in the Bulletin of Government Finance published by the Ministry of Finance.

The obligation of the Central budget of Republic of Slovenia to Bank of Slovenia is due to settlement of the Special drawing rights of the International monetary fund by Bank of Slovenia as a fiscal agent, in line with the agreement between the Ministry of finance of Republic of Slovenia and Bank of Slovenia.

5. FINANCIAL ACCOUNTS

Financial accounts (Tables 5.1 to 5.6)

Tables 5.1, 5.2, 5.4 and 5.5 show stocks and transactions in financial assets and liabilities held by individual institutional sectors, by individual financial instruments. The basis for the financial accounts methodology is ESA95.

Tables 5.3 and 5.6 present net items by individual sectors.

Net financial assets present difference between financial assets and liabilities (stocks).

Net financial transactions present difference between transactions in financial assets and transactions in liabilities.

The general principle for stocks and transactions is valuation at the current market price. As a rule accrued interest is included in the instrument to which it relates (deposits, loans, securities).

The transactions represent the difference between increases (acquisitions) and decreases (disposals) or the net turnover in an individual financial instrument. Changes in market prices and exchange rates, and other changes (reallocations of financial instruments/sectors, changes in methodology, write-downs of claims/debts, etc.) are excluded from the transactions.

Sectors, according to SKIS, are used.

Financial instruments in financial accounts

Individual financial instruments are the same among assets and liabilities, except Monetary gold and SDRs which only appear in financial asset tables.

Monetary gold and SDRs represent financial assets of the central bank. No other institutional unit or sector shall show a liability from the above mentioned instruments.

Currency and deposits consists of three sub-categories of financial instruments:

- currency represents bank notes and coins normally used for payments and includes bank notes and coins in circulation and represents the liability of the unit which issued them (as a rule, the central bank). The category "Household Currency and NIPSH (non-profit institutions serving households)" includes the foreign currency of residents which is estimated based on net purchases.
- transferable deposits consist of sight deposits in domestic or foreign currency. Transferable deposits can be converted into currency or transferred by cheque, payment order, debit entry or the like, without significant restrictions or additional costs.
- other deposits consist of deposits that cannot be used to make payments at any time and are not convertible into currency or transferable deposits without significant restrictions or additional costs.

Securities, excluding shares, are comprised of the following:

- short-term debt securities (with an original maturity of up to one year bills and other short-term debt securities);
- long-term debt securities (with an original maturity of more than one year: bonds);
- financial derivatives (options, swaps, standardised futures, interest rate futures and warrants).

Loans consist of all types of loans created when creditors lend funds to debtors, either directly or through brokers, that are either evidenced by non-negotiable documents or not evidenced by documents. The initiative concerning a loan normally lies with the borrower. Loans also include loans for financing trade credits, financial leasing, repurchase agreements, and repayable margin payments related to financial instruments when these agreements and payments are liabilities of corporations that are not monetary financial institutions. Loans do not include trade credits or advances.

Loans are broken down into short-term loans (with an original maturity of up to one year) and long-term loans (with an original maturity of more than one year).

Shares and other equities represent:

- Shares which are quoted (on a domestic or foreign market);
- Unquoted shares;
- Other equities;
- Shares/units of investment funds.

Shares/units of investment funds include shares of investment companies, investment coupons (referring to one or more units of mutual funds) and units of pension funds.

Insurance technical reserves comprise the insurance technical reserves of insurance corporations and pension funds against policyholders and beneficiaries, and are divided into three sub-categories of financial instruments.

Net equity of households in life insurance reserves including:

- net life insurance provisions;
- net provisions for life insurance policies where the investment risk is borne by the policyholders;
- net health insurance provisions.

Net equity of households in pension fund reserves consists of provisions deriving from pensions.

Prepayments of insurance premiums and reserves for outstanding claims represent net prepayments of insurance policies, net reserves for outstanding claims and other net insurance technical reserves.

Other assets and liabilities are broken down as follows:

- Commercial credits and advances;
- Other (other assets and liabilities, excluding commercial credits and advances).

Commercial credits and advances consist of financial claims or liabilities arising from the direct extension of credit by suppliers or buyers for goods and services transactions, and advance payments for work that is in progress or to be undertaken and associated with such transactions.

Other (other assets and liabilities excluding commercial credits and advances) consists of all other claims and liabilities arising from timing differences between transactions and payments made in respect of taxes, social contributions, wages, rents, dividends, interest and transactions in financial assets on the secondary market. As a rule, accrued interest is included in the instrument to which it relates. However, should it be impossible to include the interest in the relevant instrument, it is disclosed in the category "Other".

Financial accounts data may differ from other statistical data because of:

- valuation method (current market value),
- data sources,
- time of data recording,
- time of data revision,
- methodological differences in financial instrument classification and
- other methodological differences.

Data for the period before the 1st of January 2007 are converted into EUR based on exchange rate 1 EUR = 239,64 SIT.

6. NON-FINANCIAL ACCOUNTS AND GENERAL ECONOMIC STATISTICS

General notes

The Standard Classification of Activities is defined by the Decree on the Introduction and Use of the Standard Classification of Activities (Official Gazette of the Republic of Slovenia, No. 69/2007, 17/2008) and is in line with the classification of activities NACE Rev.2 (Nomenclature statistique des activités économiques dans la Communauté européenne) as a compulsory statistical standard of the European Union, which is directly connected to the international classification of the activities of United Nations ISIC Rev. 4 (International Standard Industrial Classification).

The basic activities of an economy are:

- A Agriculture, forestry and fishing
- B Mining and quarrying
- C Manufacturing
- D Electricity, gas steam and air conditioning supply
- E Water supply, sewerage, waste management and remediation activities
- F Construction
- G Wholesale and retail trade; repair of motor vehicles and motorcycles
- H Transportation and storage
- I Accommodation and food service
- J Information and communication
- K Financial and insurance activities
- L Real estate activities
- M Professional, scientific and technical activities
- N Administrative and support service activities
- O Public administration and defence, compulsory social security
- P Education
- Q Human health and social work activities
- R Arts, entertainment and recreation
- S Other service activities
- T Activities of private households as employers, undifferentiated goods- and services- production activities of households for own use
- U Activities of extraterritorial organizations and bodies

Methodological notes and a detailed classification for the real sector are published on the Statistical Office's Web site:

http://www.stat.si/skd_nace_2008.asp (in Slovene).

General

Data prior to 2007 are published in tolar; from 2007, data are published in euros.

Non-financial accounts and general economic statistics

Tables 6.1 and 6.2: Expenditure of Gross Domestic Product

Real yearly growth rates are calculated from the GDP data in constant prices, reference year 2005.

Tables 6.3 and 6.4: Gross Domestic Product by Activity

Real yearly growth rates are calculated from the GDP data in constant prices, reference year 2005.

Tables 6.5 and 6.6: Industrial Production Index

For the period from January 1992 to January 2004, industrial production indices are calculated from quantitative data on the production of industrial products.

From February 2004 onwards, the basis for calculating the production indices are data on the value of production.

Tables 6.7 and 6.8: Turnover and New Orders in Industry

Data for the year 2010 are provisional.

For the period from January 1998 to January 2003, indices on turnover are estimated on the basis of the monthly data on the quantity of sold industrial products and the average annual prices of industrial products. Data from February 2003 onwards are gathered with the regular monthly survey on turnover, new orders and value of stocks in industry.

Real yearly growth rates are calculated from the real index on turnover and new orders in industry. The deflator is the industrial producer prices index.

Tables 6.9 and 6.10: Business Tendency and Consumer Surveys

The sentiment indicator is the weighted average of the confidence indicator in manufacturing and retail trade, plus the consumer confidence indicator. Sentiment indicators of certain activities or consumers are calculated from answers shown in the table.

The results are shown as a balance by individual questions. The balance is the difference between positive and negative answers, expressed as percentages. The balance shows the movement of the observed economic indicator (present situation or future expectations), and not the real size of economic indicators.

Table 6.11: Employment by Labour Force Survey (ILO)

The Slovene Labour Force Survey was carried out in compliance with International Labour Organisation (ILO) guidelines for labour force statistics and with Eurostat requirements. This enables the comparability of our data to the data of other countries.

Data in column 5 – self-employed persons include family-member assistants as well.

Note 1: From 2008 onwards the revised classification of activities SKD 2008 is used, which is internationally comparable with the NACE Rev. 2 classification of activities.

Table 6.12: Unemployment by Labour Force Survey (ILO)

The Slovene Labour Force Survey was carried out in compliance with International Labour Organisation (ILO) guidelines for labour force statistics and with Eurostat requirements. This enables the comparability of our data to the data of other countries.

Table 6.13: Average Wages and Salaries

Real wages and salaries are deflated by the consumer price index (CPI).

From January 2005 onwards a new methodology for the calculations of average monthly wages and salaries has been used. The statistical survey also includes legal entities with one or two persons in paid employment in the private sector. Individual private entrepreneurs and persons employed by them, own account workers and farmers are not covered.

Published data are the results of new research: the Monthly Report on Earnings at Legal Entities. Data are collected by the Agency of the Republic of Slovenia for Public Legal Records and Related Services (with the common questionnaire (Form 1-ZAP/M)). Statistical work was done by SORS. SORS also calculated the average monthly wages and salaries data for 2004 according to the new methodology.

Table 6.14 Nominal effective exchange rate and Real harmonised competitiveness indicators

Nominal effective exchange rate, Euro area-17 countries vis-a-vis the EER-40 group of trading partners (AU, CA, DK, HK, JP, NO, SG, KR, SE, CH, GB, US, BG, CZ, LV, LT, HU, PL, RO, CN, DZ, AR, BR, CL, HR, IS, IN, ID, IL, MY, MX, MA, NZ, PH, RU, ZA, TW, TH, TR, VE); Currency denominator: Euro.

Real harmonised competitiveness indicators consumer prices and unit labour costs in total economy deflated; ECB EER-20 group of currencies and Euro area 17 country currencies (FR, BE, LU, NL, DE, IT, IE, PT, ES, FI, AT, GR, SI, AU, CA, CN, DK, HK, JP, NO, SG, KR, SE, CH, GB, US, CY, CZ, EE, HU, LV, LT, MT, PL, SK, BG, RO); Currency denominator: until 31.12.2006 Slovenian tolar, from 01.01.2007 Euro.

The growth of the index value represents decrease of competitiveness.

Note 1: Data for harmonised competitiveness indicators unit labour costs in total economy deflated are quarterly.

Explanations to harmonised competitiveness indicators calculations are available in special methodological paper "Calculations of harmonised competitiveness indicators", on the Web site of Bank of Slovenia:
<http://www.bsi.si/publikacije-in-raziskave.asp?MapaId=1039>.

Tables 6.15 and 6.16: Consumer Price Index

The Harmonized Index of Consumer Prices (HICP) is a comparable index of consumer prices produced by each Member State and used for international comparison of consumer price inflation. In Slovenia it is available from the year 2001 onwards.

Tables 6.17 and 6.18: Industrial Producer Price Index

The index of industrial producer prices measures changes in the level of producer prices of industrial products that are sold by producers on the Slovenian market. The tables show the price indices and growth rates by end-use of products, as well as by main divisions of activities, v2 (2008).

Review of the links between the data on Slovenia in the Bulletin of the Bank of Slovenia and the Euro area data in the ECB's Bulletin

The table below shows the correspondence between the statistical tables on Slovenia in the Bulletin of the Bank of Slovenia and on the Euro area in the ECB's Bulletin, i.e. where are the data on Slovenia included into the Euro area aggregates. The ECB's Bulletin is available on the internet address: <http://www.ecb.int/pub/mb/html/index.en.html>.

Tables in Monthly Bulletin of the Bank of Slovenia	Tables in Monthly Bulletin of the ECB
1.1. Monetary aggregates	2.3 Monetary statistics (Monetary aggregates and counterparts)
