Important information

Monthly Bulletin of Bank of Slovenia has been, from the number 2-3 for February-March 2007, volume 16, partly changed in its content and form.

The preannouncement of the change has been published on the web page of the Bank of Slovenia in January 2007.

The main changes are as follows:

- The beginning of publishing the statistical data of value, which refer to the period after the entry to the euro area, in the official domestic currency - euro. The data of value for the previous period will continue to be published in tolars, as the official Slovenian currency in that period. The data in euros are in the tables separated from the data in tolars by line.
- The change in the concept of the international monetary reserves because of the entry to the Economic and monetary union. Among the Slovenian international monetary reserves after the entry to the euro area, compared to the period before, there are no longer assets in euro as well as the claims on the euro area residents. More explanation is available in: "The statistical treatment of the international monetary reserves at the entry of Slovenia to the euro area" (slovenian), in the chapter Methodological information on the internet page: <http://www.bsi.si/en/financial-data.asp?Mapald=64>.
- The change in the presentation of the currency in the circulation to the standards of the euro area.
- The accommodation of the balance sheet of Bank of Slovenia to its activities in the framework of the Eurosystem.
- The beginning of the publishing of the interest rates of the euro area money market as well as the publishing of the whole set of the interest rates of the Monetary financial institutions according to the ECB's methodology.
- The beginning of the publishing of the financial accounts statistics in the new chapter.
- Colour separation of the individual statistical chapters, to alleviate search and because of the link of the chapters to the specialised publications.

More information can be found in Methodological Notes in the Bank of Slovenia monthly Bulletin.

The entry to the euro area (on 1.1.2007) caused a break in the time series of the statistical tables in the Monthly bulletin in cases where the "currency" is an attribute. An expected reclassification takes place, for example of the stock of outstanding loans in euros from the time series of "foreign currency" before the introduction to the time series of "domestic currency" after the introduction of euro. To enable easier reconstruction of this change, the shares of the Euro amounts in stocks of the foreign currency in the tables 1.3, 1.4, 1.5 and 1.6 on 31.12.2004, 31.12.2005 and 31.12.2006 are published in the chapter Methodological notes.

- 5. Public Finance
- 6. Banking System
- 7. Financial Markets

In the beginning of the second quarter the situation in the euro area manufacturing, retail and construction sectors deteriorated, while confidence in the economy declined further in June. The situation on the labour market remains bad, and is being reflected in the high unemployment rate, which exceeded 11% in May. Inflation is gradually falling, as a result of weak domestic demand and a fall in prices of oil and other commodities. It stood at 2.4% in June, down 0.3 percentage points on the beginning of the year. The euro fell again against the US dollar in June, and there was no change in the key interest rates of the ECB and the Fed.

The monthly indicators of economic activity and confidence for the second quarter suggest the possibility of a deterioration in the economic situation in Slovenia. Compared with the situation in the international environment, growth in industrial production was relatively favourable during the first four months of the year, but the outlook has deteriorated as a result of a further decline of confidence in EU markets. Indicators of domestic demand remain low. Activity in the construction sector in April declined in current terms. The gradual decline in volume turnover in most segments of the wholesale and retail trade sector and other categories of services continued. Economic sentiment deteriorated again in June. In the private sector confidence declined in services and manufacturing, where demand indicators fell. In the second quarter the consumer confidence indicator approached the low recorded in 2009.

There was no deterioration of labour market trends during the first five months of the year. The number of registered unemployed is gradually falling, as is the registered unemployment rate, partly for administrative reasons. The figures for surveyed unemployment also remained relatively favourable in the first quarter. The workforce in employment is still falling in year-on-year terms, but almost solely due to further lay-offs in construction. Employment in the manufacturing sector remained at last year's level. However, May's stalling in the number of new hires and the number of vacancies, which dropped to the levels seen in 2009 and 2010, is an indication of a risk of a deterioration in the situation on the labour market in the second half of the year. Labour costs as measured by the real wage bill are continuing to fall.

Year-on-year inflation as measured by the HICP stood at 2.4% in June, the same as the euro area average. Year-on-year growth in energy prices and prices of unprocessed food increased, while growth in prices of non-energy industrial goods declined. In contrast to last year, the contribution made to inflation by excise duties has been positive recently. The core inflation indicators remain low, an indication of the continuing cost adjustment of the economy and weak domestic consumption.

According to the revised figures, the current account recorded a balanced position during the first four months of the year. The main factors were favourable growth in exports of travel services and an increase in the surplus of trade in transport services. The deficit in merchandise trade is also diminishing as a result of weak imports. The developments in factor income are unfavourable, as net interest payments and the deficit in income from FDI are increasing. Disbursements of European funds have also declined this year. The cumulative current account deficit in the 12 months to April stood at 0.3% of GDP, unchanged from the same month last year.

The general government deficit in the first quarter of this year fell significantly, primarily as a result of the absence of the one-off developments that required budget expenditure last year. General government expenditure was also down irrespective of this effect. Growth in general government revenues was low, in keeping with the economic situation. An even larger contraction in expenditure can be expected in the second half of this year, as a result of measures set out in the Public Finance Balance Act. Government borrowing has primarily been short-term this year, and based on treasury bills. The required yield on treasury bills was up slightly on March, while the required yields on longer-term forms of borrowing are also rising.

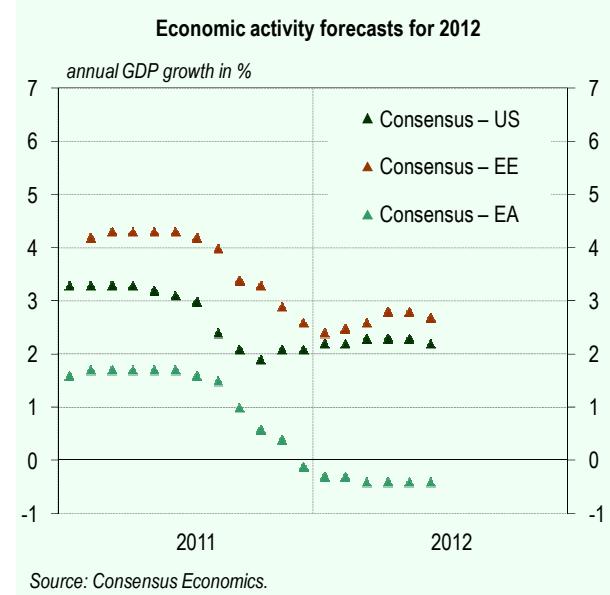

The banking system's total assets declined by EUR 200 million in April to EUR 49.4 billion. The main factors in the decline in total assets were a decline in government deposits and continuing debt repayments to the rest of the world on the funding side, and a contraction in lending activity and a decline in investments in securities on the investment side. April's standstill in lending to the non-banking sector was reflected in a decline in year-on-year growth in loans to the non-banking sector to -4.4%. Year-on-year growth in net loans to non-financial corporations declined to -7.5%, while growth in loans to households declined to 0.7%. The banking system recorded a pre-tax loss of EUR 34 million during the first four months of the year. Alongside the decline in the banking system's gross income, the main factor in the loss was high impairment and provisioning costs, which were up more than a third on the same period last year.

The market capitalisation of shares on the Ljubljana Stock Exchange fell by 9.6% in May to EUR 4,347 million, while the market capitalisation of bonds fell by 0.3% to EUR 13,400 million. The SBI TOP fell by 10.2% in May to 534, taking the year-on-year change to -30.8%. The proportion of the market capitalisation of shares on the Ljubljana Stock Exchange accounted for by non-residents was down 0.6 percentage points in May at 12.3%. As a result of global risk aversion and the migration of funds to safer investments, the domestic mutual funds' assets under management declined by 4.5% in May to EUR 1,804 million. The average unit price fell by 3.9% during the month, taking the year-on-year change to -9.9%.

1

International Environment

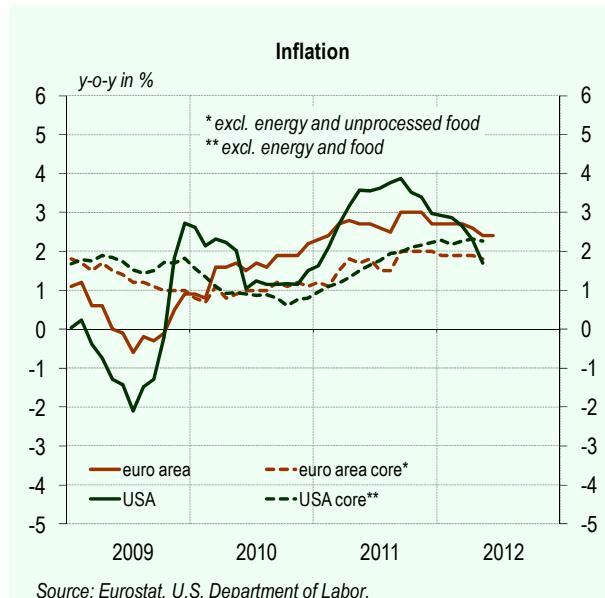

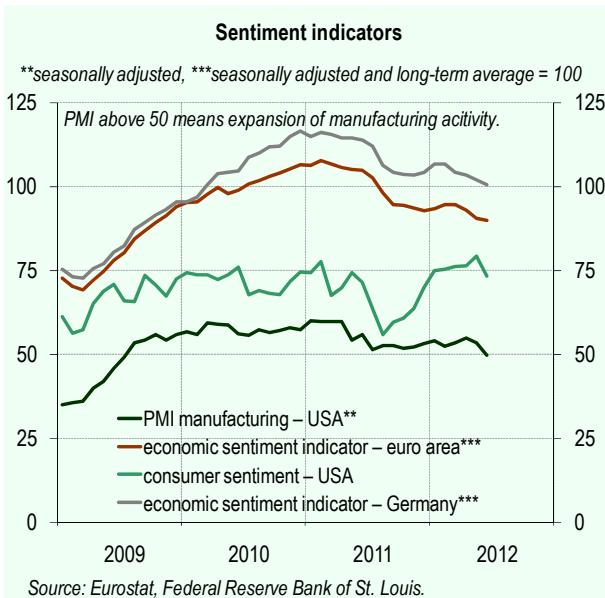

As the debt crisis mounted and the indicators of economic activity weakened in the euro area, the forecasts for this year's growth in certain economies were revised slightly downwards in June. Alongside the slowdown in growth in international trade, the main factors in the downward revisions were the uncertainties in connection with the Greek elections, the size of the bailout for the Spanish banking system and the sustainability of public debt in Italy. In June Consensus cut its economic growth forecast for the euro area for next year, but left its forecast for this year unchanged. Compared with its May forecasts, in June Consensus cut its economic growth forecasts for this year for certain major economies, most notably those for the Netherlands and Italy to -0.9% and -1.8% respectively. It also cut its forecasts for GDP growth in the US for this year and next year by 0.1 percentage points, to –still relatively high – 2.2% and 2.4% respectively. In addition to the developed countries, India, China, Brazil, South Africa and certain countries of south-eastern Europe also had their economic growth forecasts cut.

At the beginning of the second quarter the situation in the manufacturing, retail and construction sectors deteriorated in the euro area. The indicators for manufacturing and trade remain more favourable in the US. Industrial production in the euro area was down in year-on-year terms in April for the fifth consecutive month, the rate of decline reaching 2.4%. The situation in the construction sector and the retail sector also deteriorated compared with March. The amount of construction put in place in the euro area in April was down 4.5% in year-on-year terms, the periphery countries recording the largest contractions of more than 14.0%. The year-on-

Notes: *Seasonally adjusted data – Eurostat for the euro area and BEA for the US, ** European Commission, June 2012.

year decline in real volume turnover in wholesale and retail trade in April was 1.3 percentage points larger than in the first quarter and reached 2.5%. The economic situation is also deteriorating in certain EU Member States outside the euro area. The situation remains more favourable in the US, despite weak monthly developments in May. Year-on-year growth in volume turnover in the retail sector stood at 3.5%, while growth in industrial production stood at 4.7%.

Given the decline in the confidence indicators, the economic outlook for the euro area is deteriorating. The confidence indicators remain more favourable in the US. The economic sentiment indicator for the euro area calculated by the European Commission declined in June for the third consecutive month, reaching its lowest level since October 2009. June also saw a decline in consumer confidence, which has remained below its long-term average since the second half of 2011. Adverse expectations are also worsening in Germany, where the ZEW index fell to its lowest level of the last decade in June. Alongside the uncertainty surrounding the debt crisis, high unemployment is another factor in the decline in confidence. The harmonised unemployment rate in the euro area stood at 11.1% in May. The unemployment rate in the US rose by 0.1 percentage points in May to 8.2%. Consumer confidence increased, but the PMI for the manufacturing sector declined, although it remained in the zone indicating an increase in activity.

Prices of oil and other commodities fell again in June. A barrel of Brent crude averaged USD 95.60 in June, down 13.5% on May. The main factors in the fall were the increasing uncertainty surrounding the debt crisis in the euro area and concerns over global economic growth. Another factor in the fall in oil prices was the increase in stocks of crude in the US, which this year have reached their highest levels of the last decade. Other commodity prices also fell, by an average of 4.2%.

Year-on-year inflation stood at 2.4% in the euro area in June, but fell to 1.7% in the US in May. Inflation in the euro area as measured by the HICP also stood at 2.4% in May, having fallen for three consecutive months. Year-on-year growth in energy prices is gradually declining from its previous high levels. It stood at 7.3% in May, down 1.9 percentage points on the beginning of the year. Year-on-year growth in the consumer price index in the US stood at 1.7% in May, down 0.6 percentage points on April. The main factor in the fall in year-on-year inflation in the US was a fall of 3.9% in energy prices. Core inflation in the euro area as measured by the HICP excluding energy and unprocessed food has been gradually falling since the beginning of this year, reaching 1.8% in May. Year-on-year core inflation in the US as measured by the CPI excluding energy and food stood at 2.3% in May.

The euro fell against the US dollar in June, while the key interest rates at the ECB and the Fed remained unchanged. The euro averaged USD 1.25 in June, down

2.1% on May. A major factor in the euro / US dollar exchange rate was the renewed increase in uncertainty on the financial markets in connection with the debt crisis in certain euro area countries. The ECB left its key interest rate at 1.00%, while the Fed left its rate at the interval between zero and 0.25%.

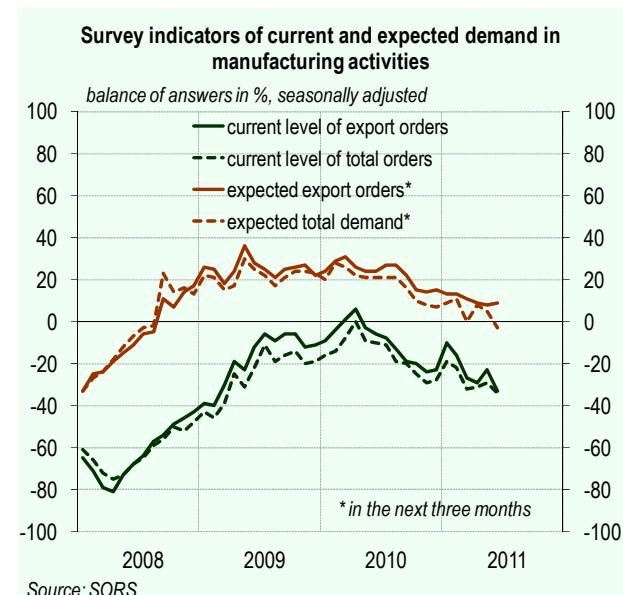

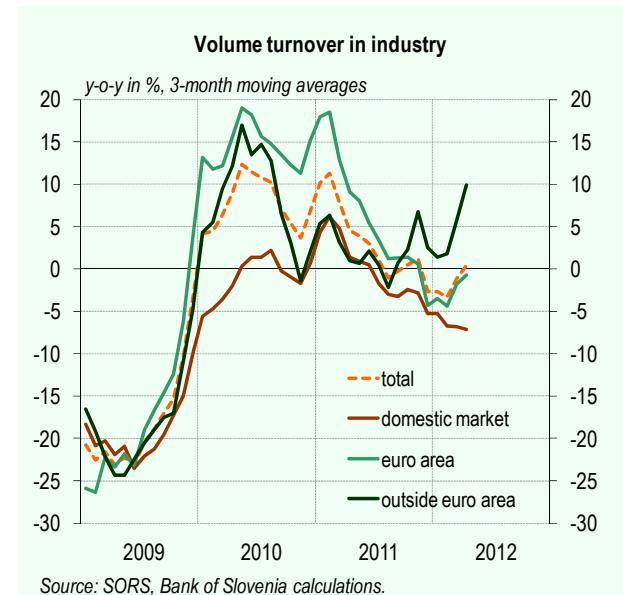

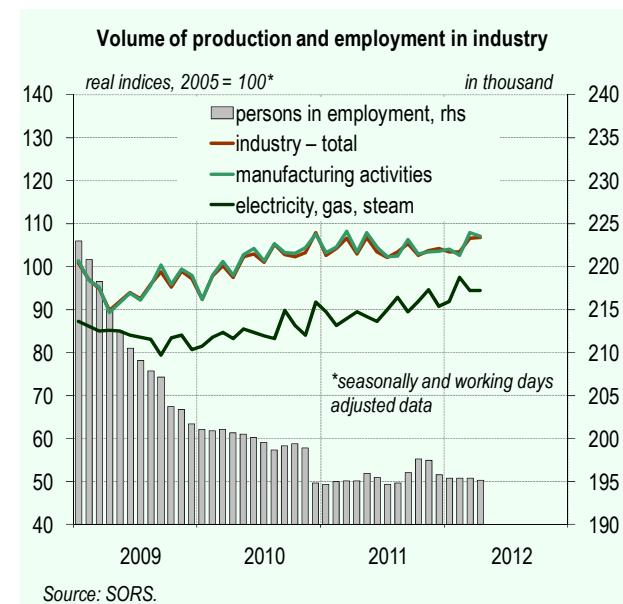

2 Economic Activity, Labour Market and Competitiveness

Economic Activity

After recording relatively high growth in March, industrial production stagnated in monthly terms in April. High growth of more than 20% in the mining sector prevented an overall decline in industrial production. Output in the manufacturing sector nevertheless declined by 0.6%. According to figures adjusted for the number of working days, year-on-year growth in overall industrial production reached 3.7% in April, but the figure for the first four months of the year was up by just 1%.

In terms of volume turnover, this year's growth in industrial production has primarily been the result of higher demand on markets outside the euro area. Demand from these markets during the first four months of the year was up 7.6% in year-on-year terms. Given the stagnating economy, rising unemployment and the fiscal crisis, demand from euro area markets is weak. In April it was up more than 5% in year-on-year terms, but was down 0.2% overall during the first four months of the year. The decline in demand on the domestic market, where manufacturing firms generate around 35% of volume turnover, has continued: it was down 6.8% in April.

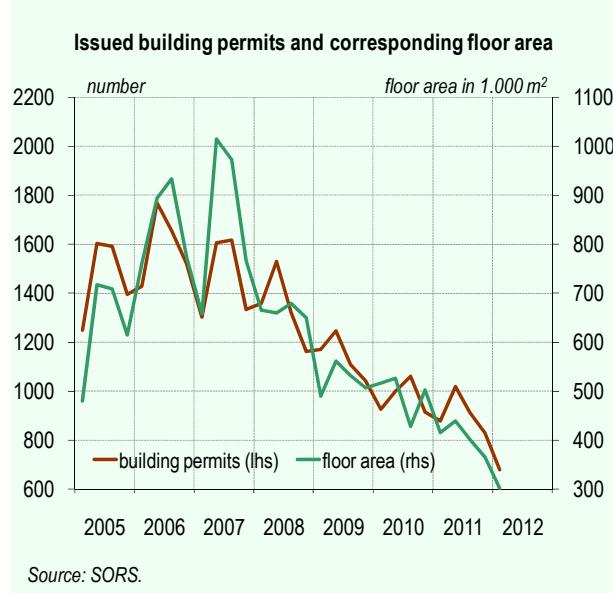

The outlook for growth in foreign demand deteriorated in the second quarter. In the EU, which accounts for over 70% of Slovenia's total merchandise exports, the economic confidence indicators declined in the majority of sectors. The manufacturing confidence indicator as measured by the European Commission in the second quarter was down 3.8 percentage points on the previous quarter. Industrial production in the EU was down in year-on-year terms in April for the fifth consecutive month,

while imports stagnated in March and April. The deterioration in the situation in the international environment is also being reflected in a decline in the indicators of current and expected foreign demand.

Activity in the construction sector in April was down sharply in monthly terms, most notably in residential construction, although the trend rate has been weakly positive since last July. The real value of construction put in place in April was down more than 9% on March, while the decline in residential construction was more than 40%. Activity in the other types of construction

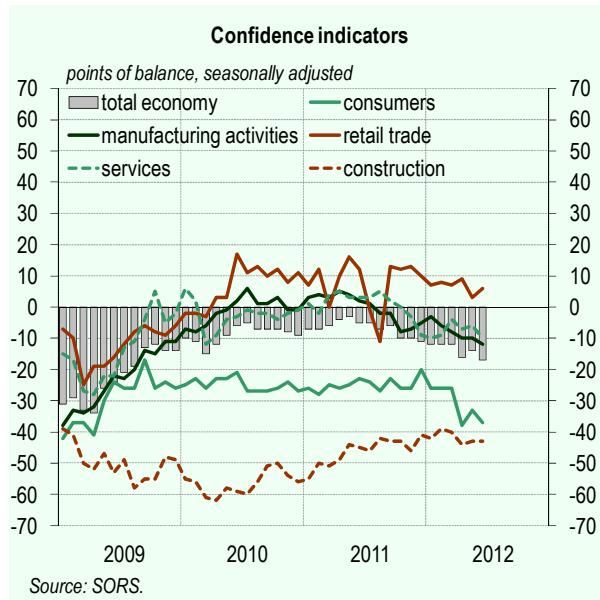

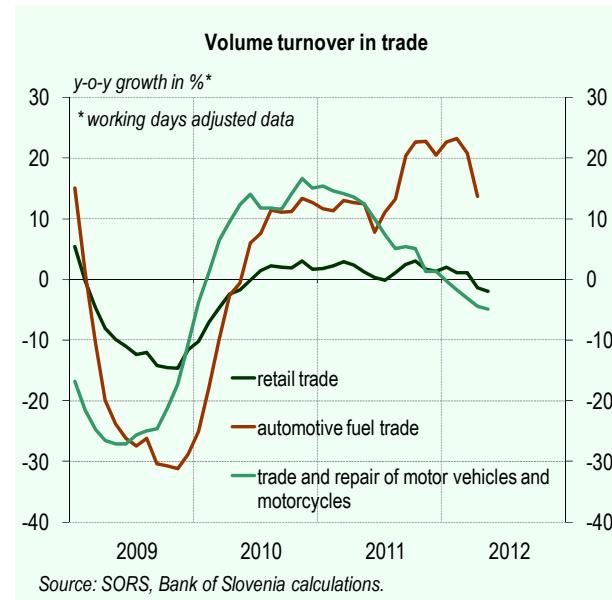

also declined. The year-on-year decline in the amount of construction put in place was 9 percentage points larger than in March at 14%. The largest decline was in residential construction, which remains very volatile. After slowing in the final months of last year, civil engineering activity is again declining in year-on-year terms at rates in excess of 20%. According to the trend SORS figures, the amount of construction put in place reached a low last July, and increased by around 4% during the first four months of this year.

Notes: Differences from official numbers are due to rounding. Data are unadjusted for seasonal and working days effects.

* Volume of industrial production. ** Real value of construction put in place. *** Old methodology.

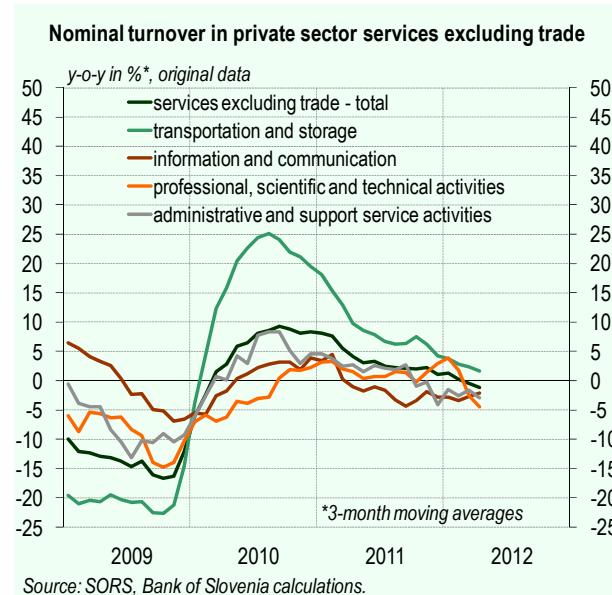

The demand indicators also suggest that the situation in the sector will remain bad. The value of new contracts continues to decline sharply, while the number of building permits issued for the construction of buildings and the corresponding floorspace are also declining. The survey indicators of current and expected orders in the second quarter were also down on the previous quarter.

There was a decline in real volume turnover in the retail sector and in trade in motor vehicles in May. Volume turnover in the retail sector including sales of motor fuels was down 1% on April, and was down more than 3% in year-on-year terms. The year-on-year decline was mitigated by high growth in volume turnover in trade in motor fuels, volume turnover in the retail sector exclud-

ing motor fuels having declined by 6%. Growth in volume turnover in trade in motor fuels, which is probably the result of increased sales in border areas thanks to differences in retail prices, is slowing. The adverse economic situation is also increasingly being reflected this year in trade in motor vehicles. Volume turnover in May was down more than 2% on April, and down just under 9% in year-on-year terms. The outlook for growth in volume turnover in wholesale and retail trade remains poor, given the real decline in wages.

Total nominal volume turnover in private sector services other than wholesale and retail trade in April was down in year-on-year terms, primarily as a result of a contraction in volume turnover in services primarily dependent on domestic demand. Growth in volume turnover in transportation and storage services primarily dependent on foreign demand stood at just under 2% in April, and is slowing in line with the dynamics in merchandise trade. Volume turnover in other categories of services is declining in year-on-year terms, particularly in professional, scientific and technical activities and in administrative and support service activities. Most notable in April were travel-related services, publishing and advertising, where volume turnover was down by more than a seventh.

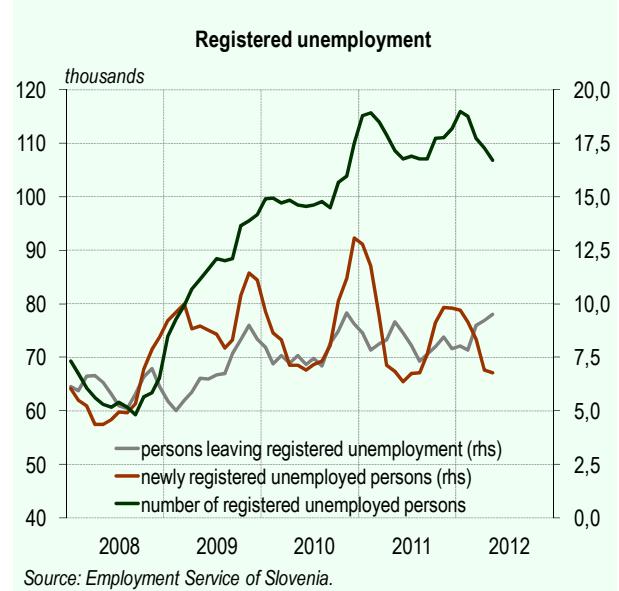

After rising in May, the economic sentiment indicator declined by 3 percentage points in June. The consumer and service confidence indicators recorded the

largest decline, of 4 percentage points. The main factor in the decline in the former was consumers' increased pessimism regarding unemployment in the next 12 months. In the second quarter the consumer confidence indicator approached the low recorded in 2009. Lower demand expectations were the main factor in the decline in the service confidence indicator. The manufacture confidence indicator also declined, primarily as a result of lower export orders and total orders. The only indicator to record a rise on the previous month was the retail confidence indicator. The reason was a rise in the sales indicator, which is highly volatile. The construction confidence indicator was unchanged in June, but nevertheless remained the lowest of all the various sectors.

Labour market

The number of registered unemployed fell again in May. It stood at 106,796 at the end of the month, down 1.7% on last May and down 2.0% on the previous month. The main factor in the fall in the number of registered unemployed was the low number of people newly regis-

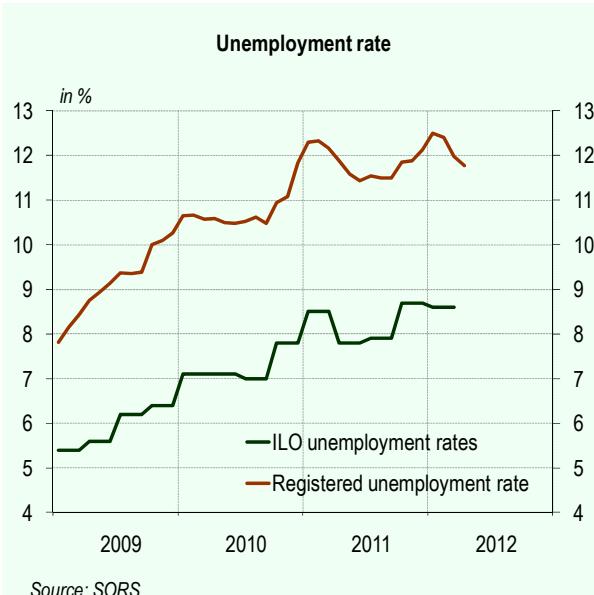

Source: Employment Service of Slovenia.

tering as unemployed in May (just 6,476). This was also the lowest monthly inflow into unemployment in the last four years. The number of people deregistering as unemployed in May was similar to the previous month at 8,764. Employment still accounts for about half the deregistrations, while half are for reasons other than employment.

Sources: Statistical Office of the Republic of Slovenia, Bank of Slovenia calculations.

Notes: * Sections of NACE Rev. 2 classification. ** CPI deflator.

The main factors were an increase in retirement from the unemployment pool, as since 2011 approximately 350 more people have been retiring each month than the monthly average in 2010, and stricter controls on breaches of unemployment regulations by the Employment Service. Since November 2011 around 500 more people have been removed each month from the unemployment register for breaches of regulations, which has reduced the registered unemployment rate by about 0.3 percentage points.

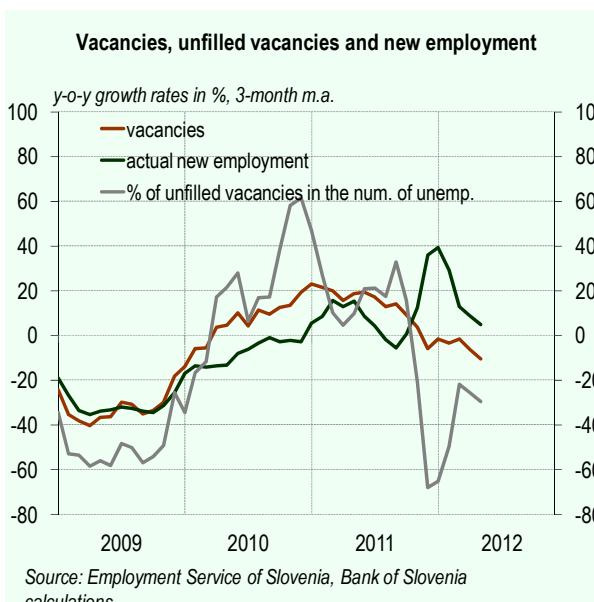

The survey unemployment rate also fell in the first quarter. The registered unemployment rate fell again in April, by 0.2 percentage points to 11.8%. Further confirmation of the easing of unemployment in the first quarter

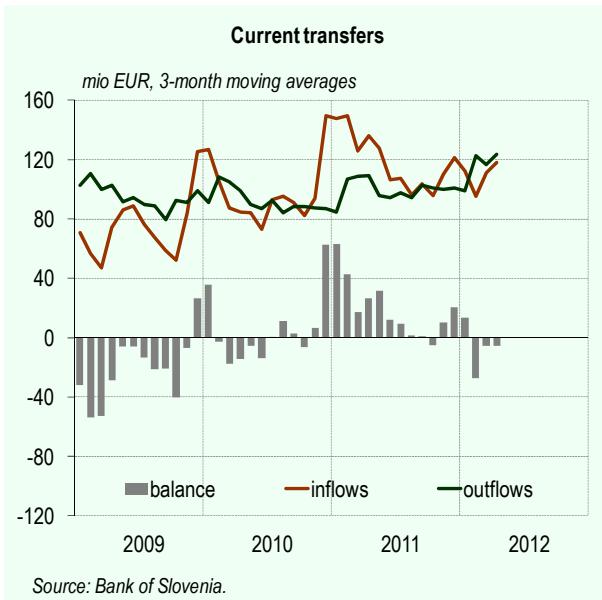

came from the labour force survey. The survey unemployment rate stagnated in the final quarter of 2011, then actually fell slightly in the first quarter of 2012 to 8.6%. This implies that the fall in the registered unemployment rate is probably not merely the result of increased retirement and stricter controls on breaches of regulations, but is also a reflection of the stabilisation of the situation on the labour market in the second half of last year and the early part of this year.

There was a sharp year-on-year decline in the number of notified vacancies and new hires in May. The number of notified vacancies at the end of May was just above 14,000, down a fifth on last May. The number of new hires also recorded a sharp year-on-year decline of about 25 %. The two indicators thereby declined to their levels of 2009 and 2010. These developments could indicate a deterioration of the situation on the labour market in the second half of the year, and are coinciding with a decline in the economic sentiment in the second quarter.

The year-on-year decline in the workforce in employment is gradually slowing. The workforce in employment fell by 1.2% in April, 0.2 percentage points less than in the same period last year. The workforce in employment at the end of April was at almost the same level as at the end of 2011, partly as a result of a seasonal increase in the spring. The workforce in employment in the public sector was up in year-on-year terms, by 1.6% in April. This was primarily the result of rising employment in

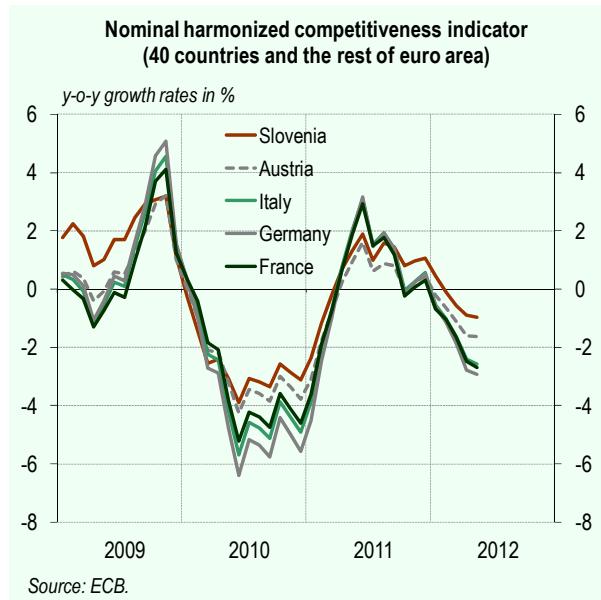

health and social work and in education. Employment in the public administration is continuing to fall, declining by 0.6% in April. The workforce in employment in the private sector was down 1.8% in year-on-year terms, again primarily as a result of job losses in the construction sector. The workforce in employment in the manufacturing sector remained at the same level as last May.

Year-on-year growth in the average nominal gross wages remains low. The average nominal gross wage per employee in April was up 1.0% in year-on-year terms at EUR 1,519. The average nominal gross wage per employee in the public sector fell again, by 0.9% in year-on-year terms. Despite the fall in the average nominal gross wage per employee in education and in health and social work, the wage bill in the public sector was up 0.6% in year-on-year terms as a result of an increase in employment in these sectors. Year-on-year growth in the average nominal gross wage in the private sector stood at 1.7% in April, 0.2 percentage points down on last April. The nominal gross wage in the private sector recorded its slowest growth in the first four months of the year since 2001, when the comparable figures were first released. After increasing in the early part of the year, growth in the nominal wage bill in the private sector has been slowing, and stood at just 0.1% in April.

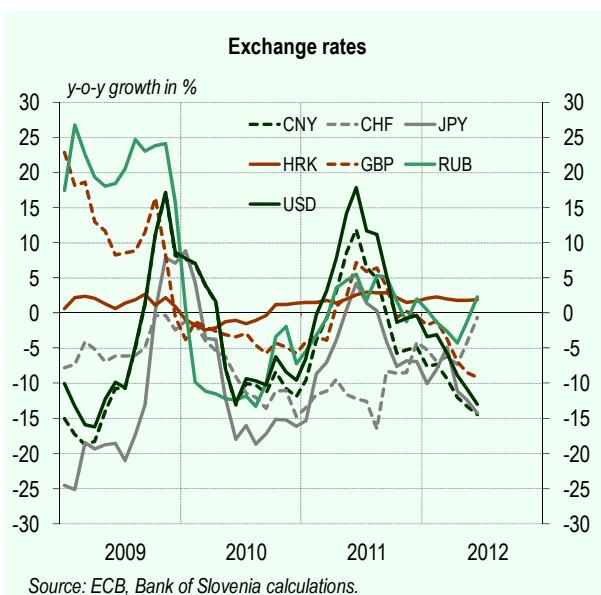

Selected competitiveness indicators

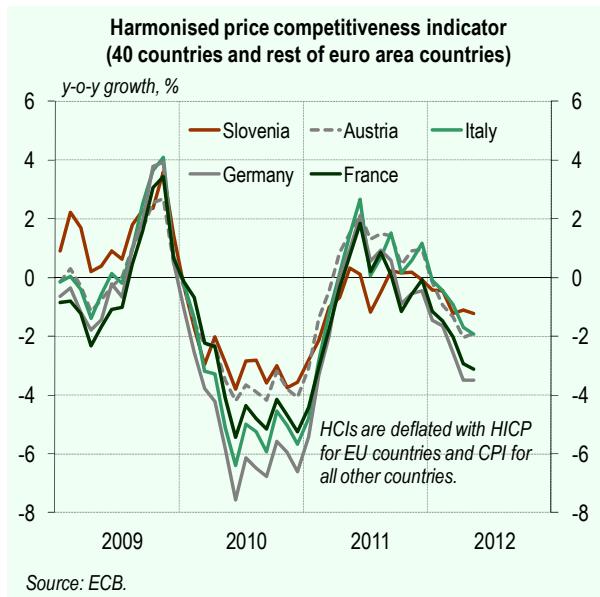

The depreciation in Slovenia's harmonised competitiveness indicator continued in May. The year-on-year

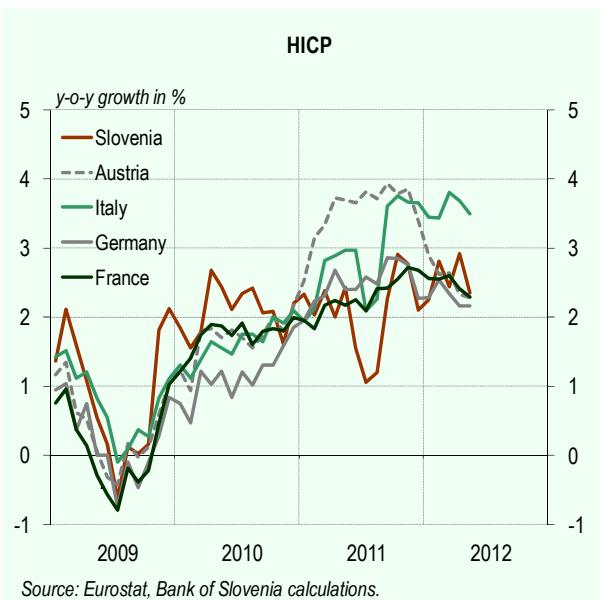

depreciation in the indicator increased to just under 1% in May, in the context of negligible monthly changes. In May the euro recorded a year-on-year appreciation against Croatian kuna, the Polish złoty and the Turkish lira, whose overall share in Slovenia's indicator is larger than in those of the other main euro area trading partners. The kuna is particularly notable in this regard. With the euro depreciating more rapidly against the US dollar, the Japanese yen and the pound sterling, the year-on-year depreciation in Slovenia's indicator was less than those of main euro area trading partners.

Slovenia's price competitiveness as measured by the harmonised indicator improved in May. The year-on-year depreciation in the price competitiveness indicator

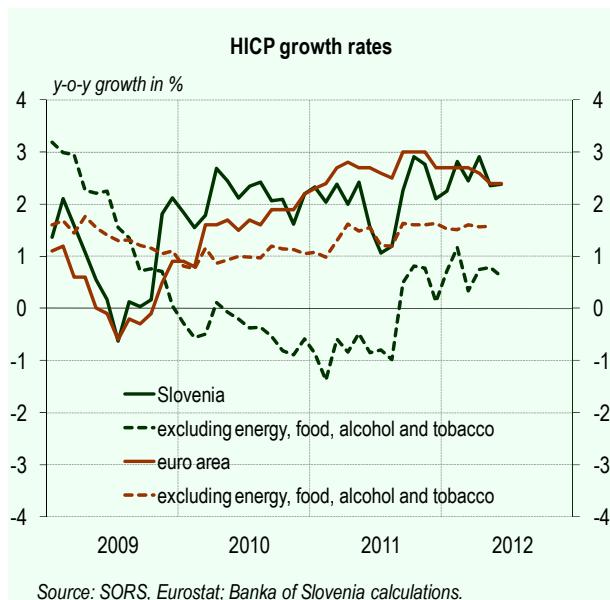

stood at more than 1% in May for the third consecutive month, although the gap between growth in domestic prices and growth in the basket of foreign prices was small and remained at approximately the same level as in April. The depreciation in the nominal indicator was again the main factor in the year-on-year depreciation. Another reason that May's depreciation was less than in the main euro area trading partners was a base effect from May 2011. Slovenia's price competitiveness indicator declined by an average of 0.9% in year-on-year terms during the first five months of the year, compared with year-on-year declines in the main partners ranging from 1.0% in Italy to 2.5% in Germany.

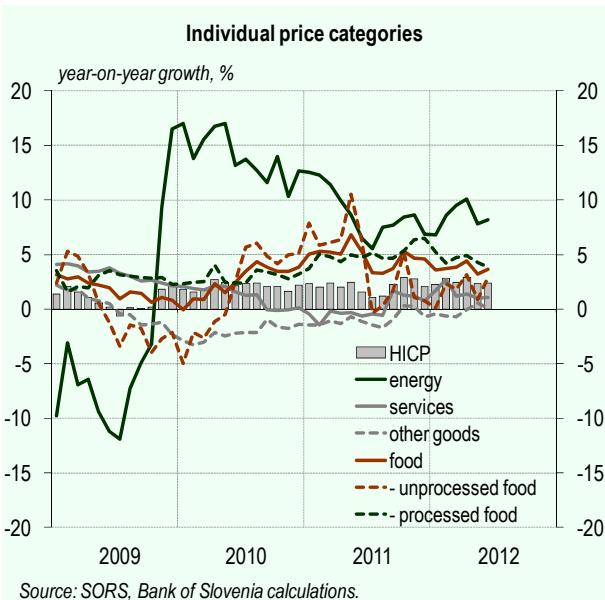

3 | Price Developments

Year-on-year inflation as measured by the HICP stood at 2.4% in June, unchanged from May. Increased year-on-year growth in energy prices and prices of unprocessed food was balanced by a decline in growth in prices of non-energy industrial goods. The increase in year-on-year growth in energy prices was the result of a base effect, prices having fallen by 1.6% from May. This was the result of a renewed fall in import prices of fuels and lubricants, despite a rise in excise duties. Year-on-year growth in food prices rose as a result of higher prices of unprocessed food, while the year-on-year growth in processed food prices fell for the second consecutive month. Year-on-year growth in services prices in June remained virtually unchanged, package holiday prices having recorded a seasonal rise from the previous month, and prices of telephone and internet services having fallen. Year-on-year growth in prices of non-energy industrial goods also declined, by 0.4 percentage points to 0.1%, primarily as a result of prices of clothing and footwear. Year-on-year inflation in the euro area also remained unchanged in June at 2.4%.

Core inflation in June was down slightly on May. The narrowest core inflation indicator, the HICP excluding energy, food, alcohol and tobacco, and the HICP excluding energy and unprocessed food both declined in year-

on-year terms. The year-on-year rates both declined by 0.2 percentage points, to 0.6% and 1.3% respectively. The broadest core inflation indicator remained unchanged at 1.4%. Core inflation remains below the average in the euro area, where year-on-year growth in the narrowest core inflation indicator stood at 1.6% in May. Low core inflation is a reflection of the decline in real income and also precautionary behaviour of households. The majority of the survey indicators of price expectations also suggest a further easing of inflationary pressures in those sectors of the economy exposed to competition.

Excise duties and taxes also made a positive contribution to inflation during the first six months of the

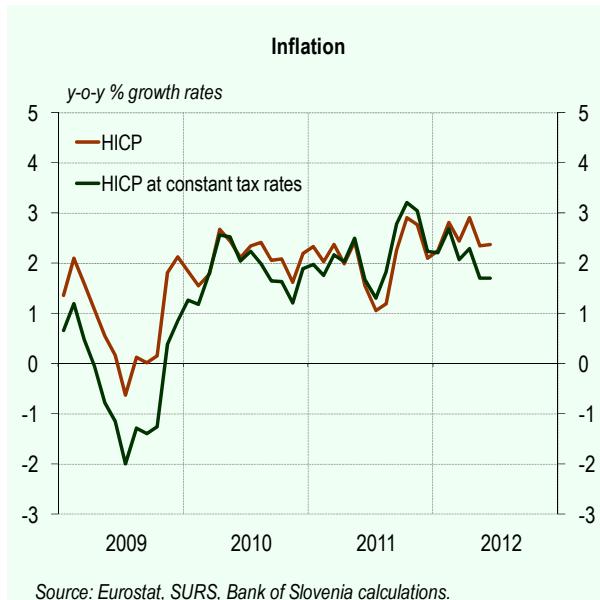

year. While changes in excise duties and taxes reduced inflation on average last year, year-on-year inflation as measured by the HICP during the first six months of the year exceeded growth in the HICP at constant tax rates by an average of 0.4 percentage points. In June the gap was 0.7 percentage points, which means that with unchanged excise duties inflation would be 1.7%. The gap was primarily the result of April's increase in excise duties on alcoholic beverages and tobacco, and rises in excise duties on refined petroleum products in the second half of last year.

In May, the last month for which an official breakdown is available, the largest contributions to the fall in year-on-year inflation came from prices of fuels and lubricants and prices of fruit. The month-on-month rise in prices of fuels and lubricants ended in May, which led to a decline of 4.0 percentage points in year-on-year growth in these prices to 10.7%. The contribution made to year-on-year inflation by prices of fuels and lubricants thereby declined from 1.0 to 0.8 percentage points. Year-on-year growth in prices of liquid and solid fuels also declined slightly, while growth in prices of natural gas increased slightly. Year-on-year growth in prices of fruit declined by 5.5 percentage points in May to -0.3%, which reduced inflation by 0.1 percentage points. Year-on-year growth in prices of meat and vegetables also declined, thereby contributing a further 0.1 percentage points to the fall in inflation. The largest decline in year-on-year growth

Note: Figures may not sum up to official figures due to rounding.

in prices of processed food was recorded by prices of bread and other cereal products. Service prices contributed 0.2 percentage points to the fall in year-on-year inflation, the largest decline being recorded by year-on-year growth in prices of car insurance, which was down 4.4 percentage points at -1.7%. Prices of telephone and internet services fell again. The year-on-year fall in these prices increased by 0.9 percentage points to 3.7%. Prices of clothing and footwear rose sharply, raising the year-on-year rate by 2.4 percentage points to 3.2%, as year-on-year growth in prices of footwear increased by 3.6 percentage points to 11.3%. The latter was the result of a significantly stronger rise in prices of footwear during the changeover in collections in the past three months com-

pared with the same period last year. The year-on-year fall in prices of cars and sports equipment slowed slightly.

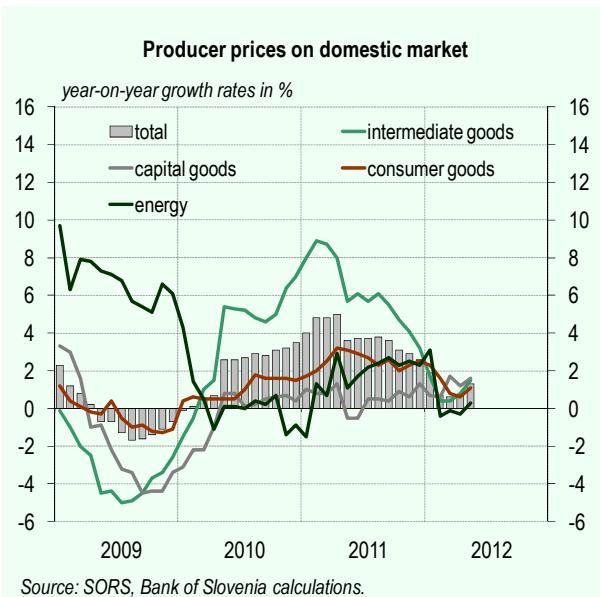

Year-on-year growth in industrial producer prices on the domestic market increased for the second consecutive month. It was up 0.6 percentage points in May at 1.3%, year-on-year growth in prices in all categories of goods increasing. The largest increase was in prices of consumer durables, which recorded year-on-year growth of 2.9%, primarily as a result of price rises in the manufacture of furniture. Year-on-year growth in prices of consumer non-durables also increased, by 0.4 percentage points to 0.8%, prices of chemicals and chemical products recording the largest rises. Year-on-year growth in energy prices increased by 0.6 percentage points to 0.3%, despite a small fall in monthly terms. Prices of capital goods also rose slightly in current terms, raising the year-on-year rate by 0.4 percentage points to 1.6%. Year-on-year growth in commodity prices increased by 0.7 percentage points to 1.5%. There were rises in all the sub-components other than prices in the manufacture of basic metals, which continued to fall in year-on-year terms in May.

4 | Balance of Payments

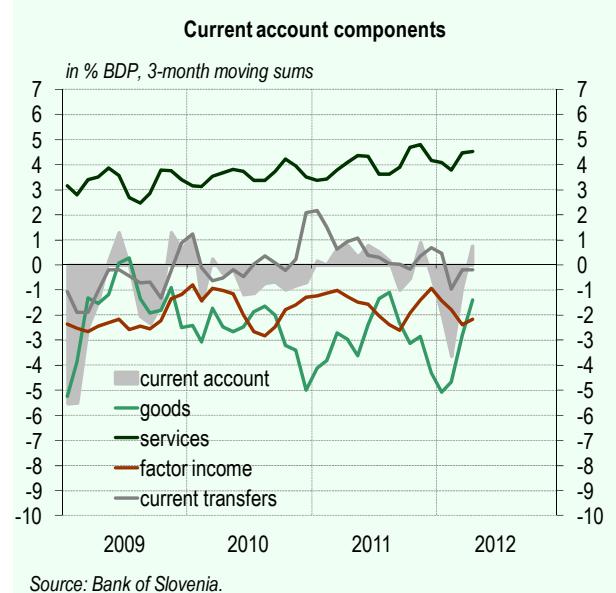

Current account

The current account was again in surplus in April. The surplus was up EUR 30 million in year-on-year terms at EUR 79 million. In April the cumulative current account position for the year moved from a deficit to a small surplus. With factor income and transfers in deficit, the main factors in the current account surplus were an increase in the surplus of trade in services and a narrowing of the merchandise trade deficit. The cumulative current account deficit over the 12 months to April stood at EUR 101 million or 0.3% of GDP, unchanged from the same month last year.

After slowing for a long period, the trend rate of growth in merchandise exports increased slightly in

April, while merchandise imports were down in year-on-year terms for the third consecutive month. The annualised trend rate of decline in merchandise imports stood at 7.5% in April. Year-on-year growth in merchandise trade has also been declining since the beginning of the year. Merchandise imports amounted to EUR 1,754 million in April, down 3.7% in year-on-year terms, while merchandise exports were up 0.8% at EUR 1,761 million. This realised a small surplus in the amount of EUR 7 million.¹ Merchandise imports during the first four months of the year were up 0.2% in year-on-year terms, while merchandise exports were up 1.2%. The cumulative deficit in merchandise trade in the 12 months to April reached EUR 973 million or 2.7% of GDP, EUR 200 million or 0.3 GDP

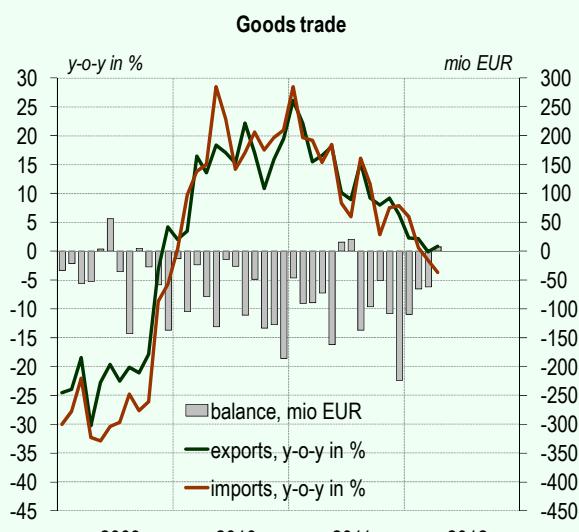

Source: Bank of Slovenia.

¹ According to SORS figures (fob for exports, cif for imports), and excluding any adjustments in coverage (explained in the Methodological Notes appendix to the bulletin), the merchandise trade deficit stood at EUR 55 million in April.

Source: Bank of Slovenia.

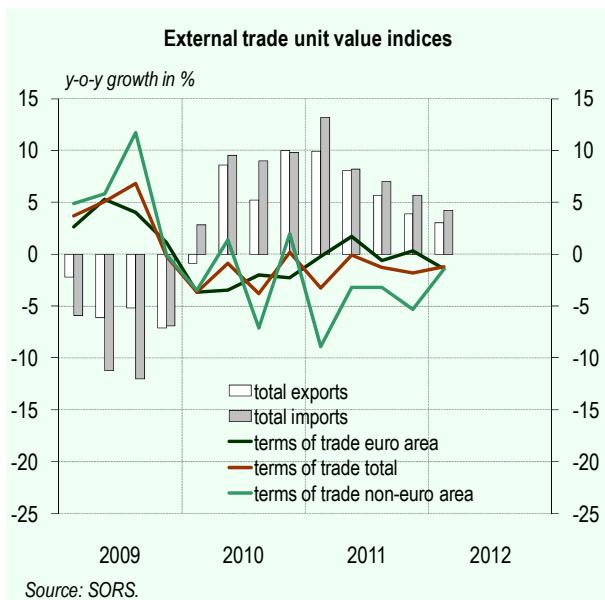

percentage points lower than in the same month last year.

According to SORS figures, the year-on-year growth in exports in April was again primarily driven by trade with non-EU countries. Merchandise exports to EU Member States were down 1.0% in year-on-year terms in April, while exports to non-EU countries were up 8.2%. A similar ratio was also maintained over the first four months of the year: merchandise exports to EU Member States were up 0.4% in year-on-year terms, while exports to non-EU countries were up 6.7%. Merchandise imports from EU Member States during the first four months of the year were up 1.1% in year-on-year terms, while imports from non-EU countries were up 3.0%. In light of

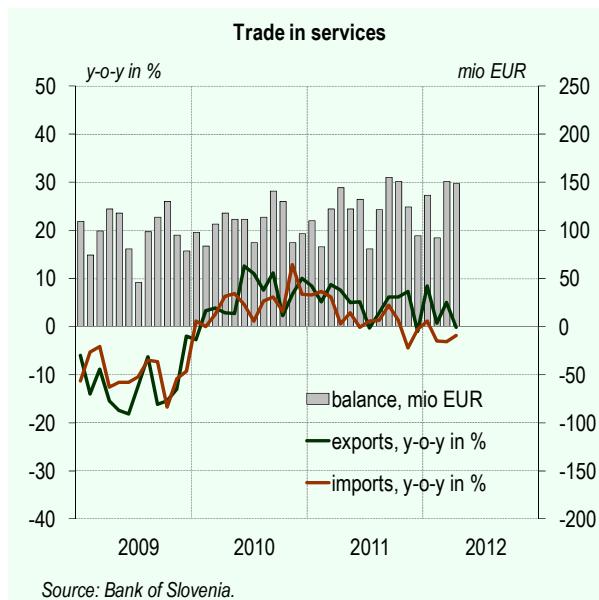

these developments, the overall merchandise trade deficit during the first four months of the year narrowed by EUR 14 million in year-on-year terms to EUR 481 million. A deficit of EUR 648 million was recorded in merchandise trade with EU Member States, while a surplus of EUR 167 million was recorded with non-EU countries.

The redirection of merchandise exports to non-EU countries may partly be attributed to price factors. The index of the average value of total exports in the first quarter of this year increased by 3.0%, while that of imports increased by 4.2%. The terms of trade stood at -1.2%, compared with -1.8% in the final quarter of last year. The terms of trade with euro area countries were positive in the final quarter of last year, but deteriorated to -1.4% in the first quarter of this year. At the same time, the terms of trade with countries outside the euro area stood at -1.5%, compared with -5.3% in the previous quarter. This is an indication of the current improvement in the terms of trade with countries outside the euro area in the first quarter of this year.

The contraction in merchandise trade was tracked by similar trends in trade in services. Imports of services in April were down 1.8% in year-on-year terms, while exports were down 0.2%. Cumulative exports of services during the first four months of the year were up 3.4% in year-on-year terms, while imports were down 1.8%. The result was a year-on-year increase of EUR 68 million in the surplus of trade in services to EUR 528 million.

Box: Changes in the balance of payments in the annual revision of figures

The annual revision of balance of payments figures was undertaken in June, and covered the period from 2008. Its main result was a reduction in the current account deficit in all years after 2008. The revisions range from EUR 88 million in 2010 to EUR 387 million in 2011, when the current account moved from an overall deficit to a small surplus. The revisions over all four years amounted to EUR 964 million. The largest changes in the current account were in the merchandise trade figures, with almost three times as many revisions on the export side than on the import side. There were three factors in the size of the changes in merchandise trade:

- The annual revision of SORS figures for the previous year.
- Methodological adjustments to the statistical data capture of Slovenia's trade with non-EU countries, which includes companies not registered in Slovenia in merchandise trade. Imports during 2009 to 2011 were between 0.2% and 1.2% higher than suggested by the previous figures, while exports were between 0.5% and 1.6% higher.
- The inclusion of data capturing the purchase of fuel by non-residents paying with cards of foreign issuers at service stations in Slovenia.

The effect of all these changes amounted to EUR 0.5 billion on the import side and EUR 1.5 billion on the export side. The overall positive effect on the current account position between 2008 and 2011 is thus EUR 1 billion. When the figures were revised, there were also minor changes in services and transfers. The changes in factor income were more significant: they contributed EUR 93 million to the widening of the current account deficit in 2010, and EUR 86 million to the narrowing in 2011. The largest change in receipts in 2010 was in domestic corporate receipts from the rest of the world. The disinvestment in the rest of the world by domestic corporates, which is reflected in negative reinvested earnings, stood at EUR 260 million before the revision, but increased to EUR 368 million after the revision as a result of a loss of EUR 108 million by one firm. There were major changes in expenditure in 2011. The largest changes were in reinvested and undistributed profits, which according to the revised figures were EUR 75 million larger than those disclosed in operating results in 2011. According to the revised figures there was also an increase of EUR 302 million in net outflows in the capital and financial account in 2011, EUR 250 million of which originated in a decline in FDI and investments in domestic securities by non-residents.

Source: Bank of Slovenia

Year-on-year growth in exports of travel services has been increasing since February, while year-on-year growth in imports has stagnated, which is bringing an increase in the surplus in travel services and the current account surplus. Imports of travel services during the first four months of the year were up 2.0% in year-on-year terms, while exports were up 6.0%. The number of arrivals by foreign visitors during this period rose by 6.4% in year-on-year terms, while the number of overnight stays was up 4.8%. The surplus of trade in travel services thereby widened by EUR 30 million in year-on-year terms to EUR 403 million.

Trade in transport services is slowing, primarily as a result of the slowdown in imports. Exports of transport services during the first four months of the year were up 1.8% in year-on-year terms, slightly faster than the growth in merchandise exports, while imports were down 9.0%. With imports contracting sharply, the surplus of trade in transport services widened by EUR 30 million in year-on-year terms to EUR 203 million.

Trade in other services is also slowing. Imports of other services (excluding transport and travel) were down 1.8% in year-on-year terms in April, while exports were down 12%. Exports of other services during the first four months of the year were up 2%, while imports stagnated. The deficit in trade in other services thus narrowed by EUR 9 million in year-on-year terms to EUR 77 million.

The deficit in factor income widened sharply during the first four months of the year to EUR 259 million.

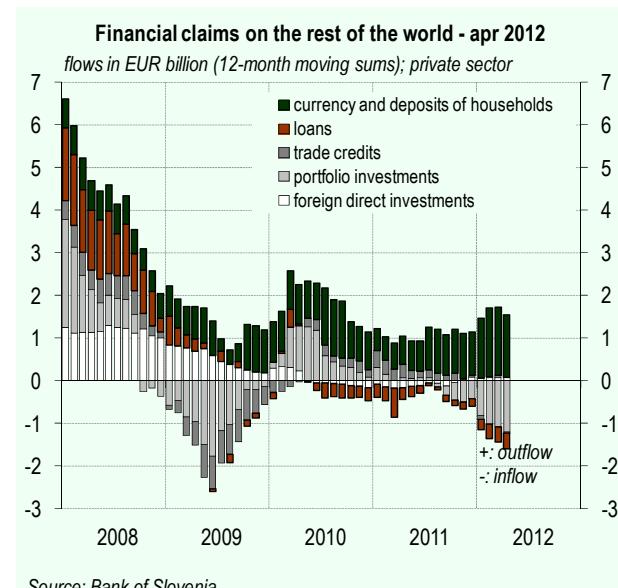

While labour income recorded a surplus of EUR 51 million in the first four months of the year, there was a net outflow of EUR 310 million in capital income. The deficit in income from FDI accounted for the largest proportion of the deficit in factor income (EUR 189 million). Reinvested earnings by non-residents in Slovenia, profit distributions and dividend payments accounted for just EUR 140 million of this; the remaining EUR 59 million represents a decline in outward FDI by Slovenian owners. Net payments of income on investments in debt securities were up over a fifth in year-on-year terms at EUR 44 million. As a result of the downgradings in the second half of last year and the early part of this year, net interest payments to the rest of the world were up just under a third in

year-on-year terms at EUR 77 million. The deficit in factor income over the last 12 months reached EUR 675 million or 1.9% of GDP, which is only a little more than in the same month last year.

The deficit in current transfers widened again in April. Current transfers recorded an outflow of EUR 20 million in April. Government transfers accounted for half of the deficit, and private transfers for the other half. The deficit this year has been the result of inefficient disbursement from the structural funds, which in the first four months of this year amounted to just 16.9% of the forecast in this year's state budget. The deficit in current transfers over the first four months of the year amounted to EUR 37 million, compared with a surplus of EUR 79 million during the same period last year.

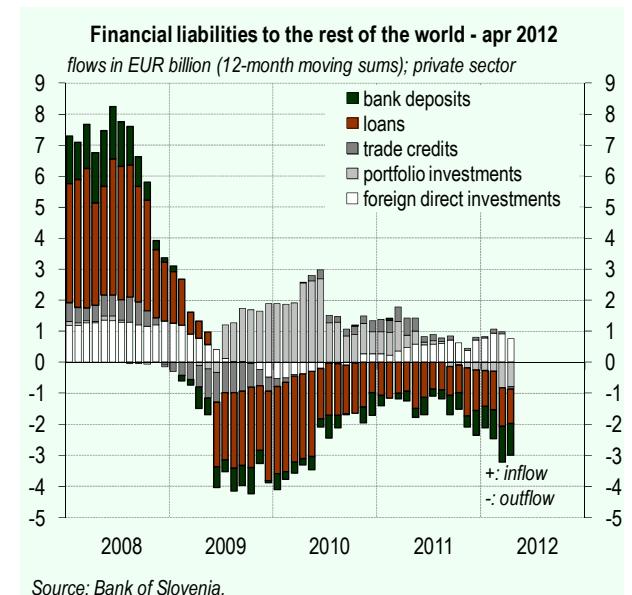

Capital and financial account

April's net outflow to the rest of the world was largely the result of further debt repayments in the rest of the world by the domestic banks and an increase in their deposits at the ECB and foreign commercial banks. This was probably the result of the domestic banks using part of the money obtained in the 3-year LTROs to repay foreign loans in April, and depositing part in accounts at foreign banks and with the ECB. Corporates also made debt repayments in the rest of the world in April. Corporates reduced their liabilities to the rest of the world by EUR 8 million during the first four months of the year. The net external debt stood at EUR 14.5 billion in April, down

EUR 202 million on the previous month. All sectors other than the Bank of Slovenia, which increased its net external debt slightly, contributed to the decline in the net external debt.

April's increase of EUR 160 million in the private sector's claims against the rest of the world was primarily the result of increases in holdings of currency and deposits in the rest of the world. The private sector increased its holdings of currency and deposits in the rest of the world by EUR 178 million. This was partly the result of the domestic banking sector again depositing part of the money obtained in the 3-year LTROs in accounts at foreign banks and with the ECB. The narrowing of the merchandise trade deficit is also being reflected in trade credits, which declined by EUR 26 million in April, although they increased by EUR 325 million during the first four months of the year. Outward FDI increased by EUR 16 million, while outward portfolio investments remained almost unchanged. The largest decline was in investments in debt securities. In April the private sector again reduced its loans to the rest of the world, by EUR 20 mil-

Source: Bank of Slovenia.

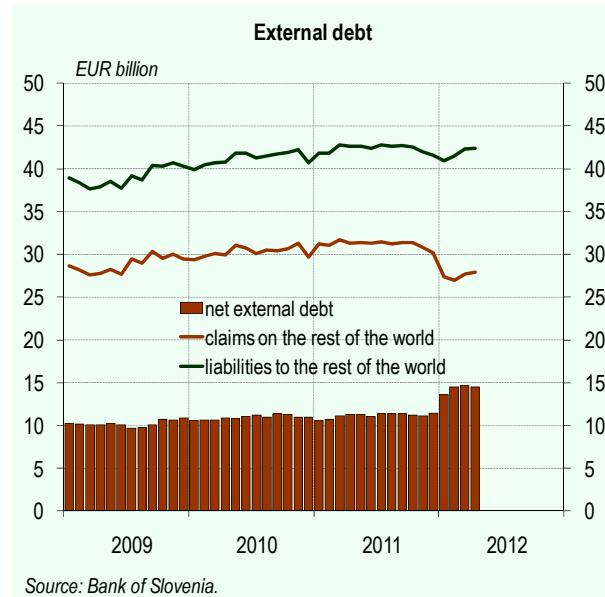

lion. The private sector reduced its exposure to the rest of the world by EUR 235 million during the first four months of the year.

Liabilities to the rest of the world declined by EUR 96 million in April, the largest contribution coming from declines in foreign loans to domestic banks and FDI.

Signs: inflows or increases in liabilities (+), outflows or increases in claims (-).

The banks repaid loans of EUR 54 million in April, taking the total over the first four months of the year to EUR 417 million. Most of the repaid loans were long-term, the stock of long-term loans declining by EUR 424 million this year. Corporates also made debt repayments in April, in the amount of EUR 19 million. While corporates raised EUR 150 million in foreign loans during the first four months of last year, the stock of foreign loans was down EUR 8 million during the same period this year. Another likely factor in this decline was the contraction in investment by domestic corporates in the first quarter. After declining by EUR 283 million in March as a result of prepayments of bonds by domestic banks, foreign portfolio investments increased by EUR 19 million in April. Non-residents' FDI declined by EUR 60 million in April. It nevertheless remained the main component of the private sector's outflow over the first four months of the year, alongside trade credits.

The net external debt stood at EUR 14.5 billion in April, down EUR 202 million on the previous month. All sectors other than the Bank of Slovenia reduced their net external debt. The decline in the net external debt was primarily the result of a larger increase in gross claims (EUR 252 million) than in gross debt (EUR 50 million). The main factors in the increase in gross claims were the government sector, which increased its investments in the rest of the world by EUR 158 million, and the banking sector, which increased its holdings of currency and deposits by EUR 80 million. This increase in the

gross external debt was primarily the result of an increase in the Bank of Slovenia's gross debt from currency and deposits.

5

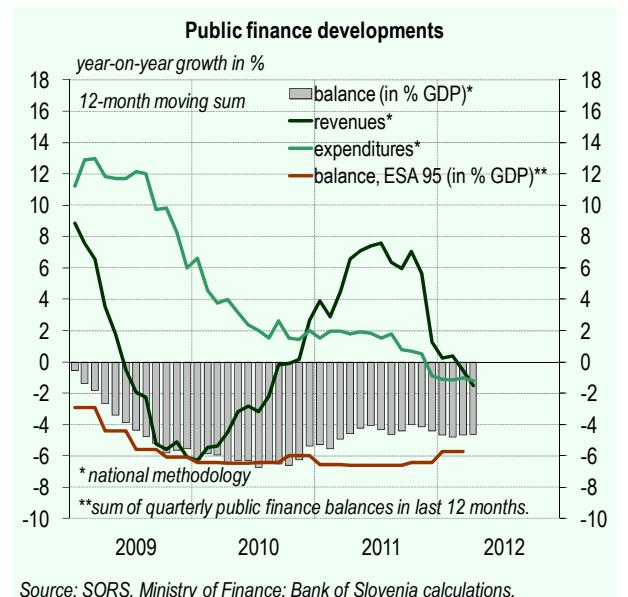

Public Finance

The general government deficit according to ESA 95 methodology in the 12 months to the first quarter narrowed to 5.7% of GDP. The reduction of the deficit from last year's 6.4% of GDP stems mainly from the absence of extraordinary expenditure incurred by the budget in the first quarter of last year (the recapitalisation of NLB d.d.). Another factor in the narrowing of the deficit was a decline in other expenditure, particularly investment and intermediate consumption. In the 12 months to the first quarter expenditure was down 1.9%, or by 0.5% if the recapitalisation of NLB is allowed for. A larger contraction in expenditure can be expected in the second half of this year, as a result of measures set out in the Public Finance Balance Act. Growth in general government revenues was low, and stood at 0.5% in the 12 months to the first quarter. Revenues from interest and social contributions were the main factors in this growth.

The consolidated general government deficit widened in year-on-year terms, primarily as a result of higher interest payments. The general government deficit amounted to EUR 788 million during the first four months of the year, up EUR 94 million in year-on-year terms. The state budget deficit during the first five months of the year stood at EUR 847 million, EUR 25 million less than in the same period last year. The improvement is the result of a decline in expenditure. The surplus recorded by the local government sector during the first four months of the year amounted to EUR 7 million, similar to the same period last year. The Health Insurance Institute (HII) recorded a deficit of EUR 62 million during the first five months of the year, compared with EUR 40 million in the same period last year. This year's larger deficit is primarily the result of the deferral of a portion of payments from the end of last

year. At its general meeting in June, the HII approved its financial plan for this year, which envisages a deficit of EUR 20 million, which will be covered from its own funds. In addition, expenditure of EUR 30 million will be deferred to 2013. These are expected to be covered by the surplus that will be generated by the effects of the Public Finance Balance Act.

General government revenues in the first four months of the year were up just under 1%, but growth in tax revenues was slightly higher. Revenues in the first four months of the year were up EUR 44 million in year-on-year terms. The increase was the result of both tax revenues (EUR 59 million) and non-tax revenues (EUR 32 million), while transfers from the EU budget have declined this year. The largest year-on-year increases in tax revenues were recorded by payments of social contributions and excise duties, while the largest increases in non-tax revenues were recorded by interest income and income from government assets. Among the major types of tax revenue, personal income tax and VAT revenues in the first four months of the year were mostly unchanged in year-on-year terms, while corporate income tax revenues were down EUR 59 million. The provisional figures for May indicate a stagnation of taxes and social contributions in the first five months of the year, primarily as a result of a decline in corporate income tax revenues. Prepayments of this tax have been lower this year, as a result of a cut in the rate.

Source: SORS, Ministry of Finance; Bank of Slovenia calculations.

Growth in general government expenditure slowed slightly, and stood at 2.5% over the first four months of the year. The year-on-year increase in expenditure in the first four months of this year amounted to EUR 138 million, interest payments increasing by EUR 95 million in year-on-year terms. In addition to interest payments, there was also a year-on-year increase in payments into the EU budget and transfers to public institutions related to the payment of wages and other expenses for employees at these institutions. Year-on-year increases were also recorded by expenditure on pensions and subsidies for public companies. The number of old-age pensioners in the first five months of the year rose by 3.6%, while the

total number of pensioners rose by 2.3%. This year the number of pensioners is rising slightly more slowly than last year, when there was a rapid rise in the number of pensioners before the rejection of the pension reforms. The main savings in the year-on-year comparison came from lower investment, a decline in the budget reserve and lower expenditure on goods and services.

New consolidated government borrowing in the first four months of the year amounted to just under EUR 1 billion, primarily via issues of treasury bills of various maturities. The government also reduced its funds in accounts by around EUR 1 billion. These were earmarked for financing the deficit in revenues and expenditure in the amount of EUR 788 million, and the repayment of maturing debt in the amount of EUR 1,174 million. There were more treasury bills issued in May and June, and the required yield in June was slightly higher than in March (e.g. by around 0.5 percentage points on 12-month treasury bills). The required yield on 9-year Slovenian government bonds approached 6% towards the end

Spreads on 10-year government bonds as compared to Germany

6

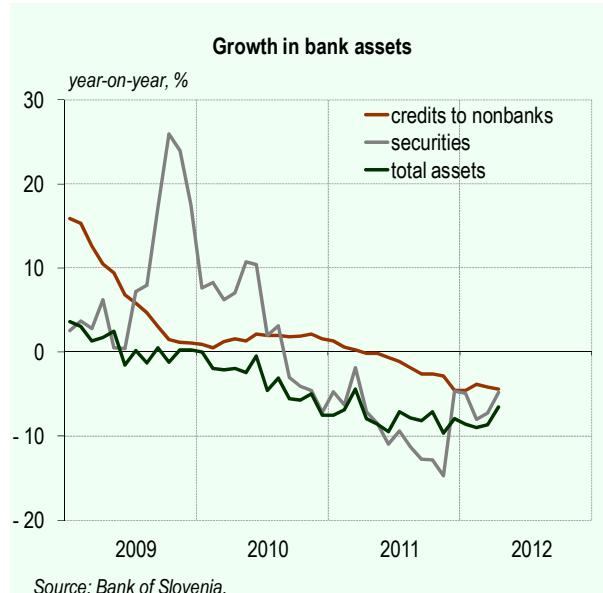

Banking System*

The banking system's total assets declined by EUR 200 million to EUR 49.4 billion in April. The year-on-year decline in total assets was -1.1%, which is less negative than in March, although the main factor in this was a base effect as a result of an above-average decline in government deposits and net debt repayments by the banks on the wholesale markets in April previous year. The main factors in April's decline in the banking system's total assets were a decline in government deposits and continuing debt repayments to the rest of the world on the funding side, and a contraction in lending activity and a decline in investments in securities on the investment side.

The decline in lending continued in April. Loans to the non-banking sector declined by EUR 126 million, domestic banks accounting for the entire decline for the second consecutive month. Year-on-year growth in net loans to the non-banking sector thus declined from -4.4% to -7.7%, the large domestic banks recording the lowest rate.

Loans to non-financial corporations (NFCs) declined by EUR 54 million in April, all the bank groups recording a decline for the third consecutive month. Year-on-year growth in loans to NFCs declined to -7.5%, the small domestic banks recording the largest decline. The large domestic banks recorded the lowest year-on-year growth in loans in April at -8.6%, partly as a result of impairments of loans.

The decline in lending to households accelerated in April, the stock of loans to households declining by EUR 37 million, taking the decline over the first four months of the year to EUR 103 million. As a result year-on-year growth in household lending declined to 0.7%. It declined at all bank groups, although it only remained negative at the large domestic banks. Two long-standing factors in the decline in loans to households have been the negative growth in consumer loans and the decline in growth in

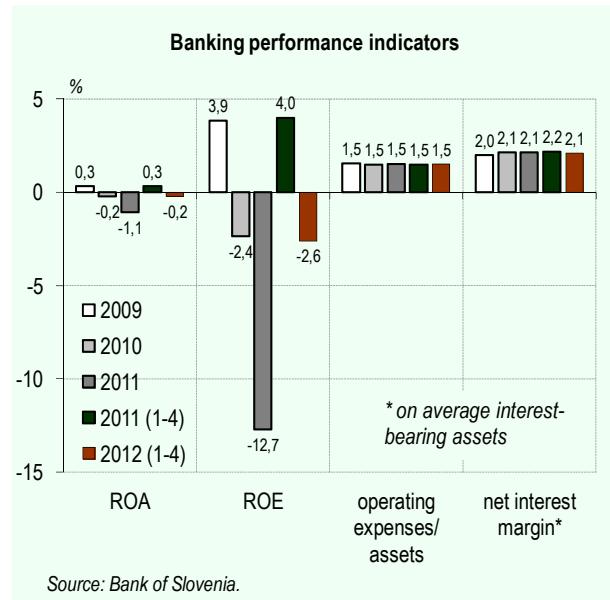

housing loans, year-on-year growth in which reached 5.7% in April.

Banks made debt repayments in the rest of the world in April, while the main factor in the decline in deposits by the non-banking sector was a decline in government deposits. Net debt repayments to the rest of the world continued in April, albeit at a slower pace than in March. The decline of EUR 60 million was entirely on account of the large domestic banks, which reduced their liabilities to foreign banks by EUR 111 million. The banking system made net repayments of EUR 810 million in the rest of the world during the first four months of the year, the banks under majority foreign ownership recording the largest repayments, at EUR 523 million.

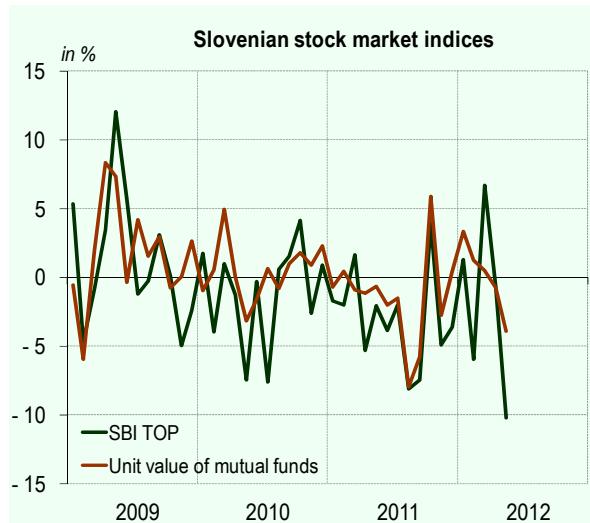

Deposits by the non-banking sector declined by EUR 118 million in April, of which government deposits accounted for EUR 97 million. Households were the only sector to record an increase in deposits in April, in the amount of EUR 24 million. The positive developments in household savings were a reflection of the rate of growth in household deposits, which rose in April for the third consecutive month. Year-on-year growth in household deposits was highest at the banks under majority foreign ownership.

The banking system generated a pre-tax loss of EUR 34 million during the first four months of this year. This was the result of a decline in gross income, and

* This section uses data from the banks that report to the Bank of Slovenia in accordance with the Guidelines for implementing the resolution on reporting by monetary financial institutions. Because of methodological differences, these figures differ from the published statistics. .

above all of a rise in impairment and provisioning costs. With interest income declining and interest expenses increasing, net interest was down 6.3% this year. The negative growth in net interest is a reflection of the decline in the stock of loans and the rise in interest rates on deposits by the non-banking sector. Alongside the aforementioned factors, a decline in non-interest income was also a factor in the decline in the banking system's gross income, which stood at 6% in year-on-year terms in April. The banking system's operating costs during the first four months of the year were down slightly on last year. Impairment and provisioning costs have increased in April additionally for 63 EUR million, taking the cumulative total over the first four months of the year to EUR 238 million, up 35.6% on the same period last year. The ratio of impairment and provisioning costs to gross income stood at 53%, up 16.4 percentage points on the same period last year.

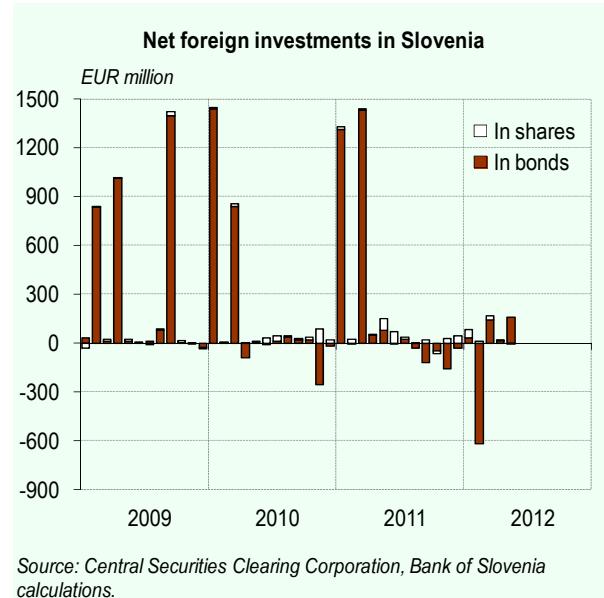

macroeconomic forecasts. The reasons lie in the bad performance of the corporate and financial sectors and in the decline in domestic consumption. Relative to the levels at the outbreak of the crisis, by the end of May the Slovenian stock market index had fallen by more than the stock market indices of the former Yugoslav republics. The market capitalisation of shares on the Ljubljana Stock Exchange fell by 9.6% in May to EUR 4,347 million, down 30.7% in year-on-year terms. The volume of trading in shares was down 4.3% at EUR 23.5 million; this was merely just over two-thirds of the average in the period after the crisis, when liquidity was already down. Shares in three companies, Krka, Mercator and Petrol, which together account for 53% of market capitalisation, accounted for 78% of the monthly volume of trading in shares. As the new owner of Etol d.d., Frutarom opted to delist the company's shares. The dividend yield on prime market shares rose by 0.4 percentage points in May to 3.7%. Investor interest in the Slovenian capital market declined: the average turnover ratio of the entire market during the first five months of the year declined to 2%.

The market capitalisation of bonds on the Ljubljana Stock Exchange fell by 0.3% in May to EUR 13,400 million. Government bonds accounted for the largest proportion of market capitalisation, at 91.6%, followed by bank bonds with 5.2% and corporate bonds with 2.9%. Factor banka d.d.'s FB15 bonds were delisted. The volume of trading in bonds fell by 27% in May, reaching just one-third of the average volume of trading in bonds in the

7 | Financial Markets

The SBI TOP fell by 10.2% in May, taking the year-on-year change to -30.8%. At 534 points, it regressed to the level seen before 2003. The depth of the Slovenian capital market declined sharply, in the context of negative

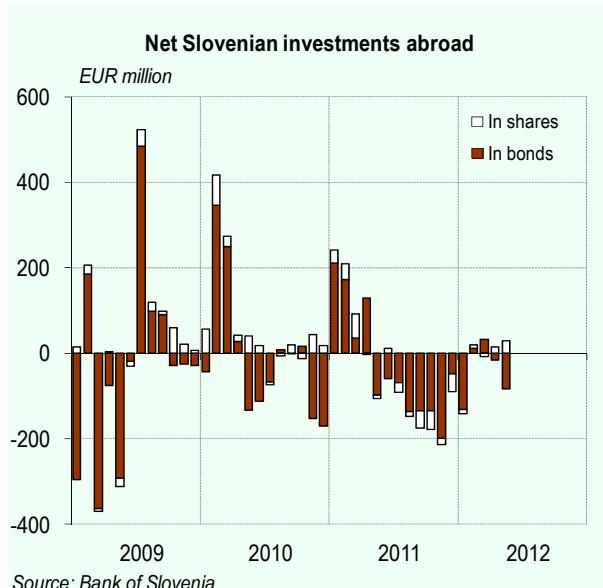

period after the crisis. The largest volume was in Petrol d.d. 2nd-issue bonds, Probanka d.d. 8th-issue bonds and Slovenska odškodninska družba d.d. 2nd-issue bonds, which together accounted for 71% of the total volume of trading in bonds. They accounted for just 3.6% of the total market capitalisation of bonds. The proportion of total stock exchange volume accounted for by bonds fell by 3.5 percentage points in May to 12.9%.

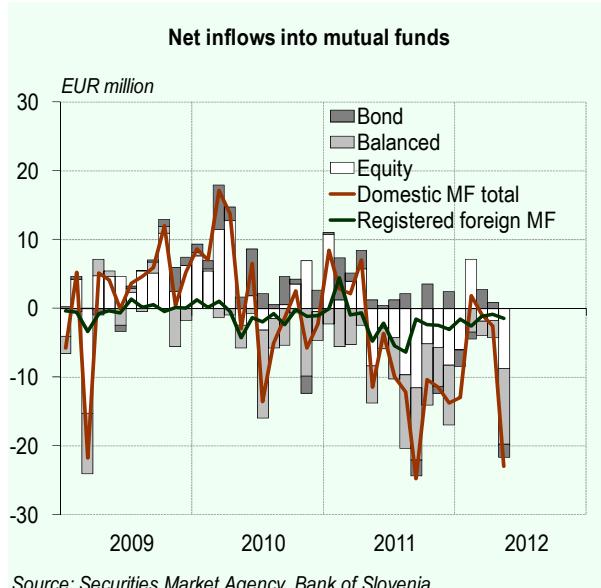

The mounting European debt crisis brought a profound deterioration in the atmosphere on the financial markets, while the trend on commodities markets remained negative. The reasons were the parliamentary elections in Greece, the French presidential elections, rising concerns about the Spanish banking sector, and weak macroeconomic indicators in developed markets and emerging markets. The PMI in Europe fell by 0.9 percentage points to 45, which still reflects a contraction in the economy. In Germany there was also a deterioration in the IFO, which could have an adverse impact on exports by Slovenian firms. The MSELEMEE index for eastern Europe fell by 11% in May, the DJ EuroStoxx index for western Europe by 8.2%, the S&P 500 in the US by 6.3% and China's Hang Seng by 11.7%. The negative trend on the Balkan stock markets also continued. Croatia's CROBEX was down 7.3%, Serbia's BELEX 15 was down 8.7%, and Macedonia's MBI-10 was down 0.7%. The year-on-year changes in all these stock exchange indices were negative in May.

The proportion of the market capitalisation of shares on the Ljubljana Stock Exchange accounted for by non-residents was down 0.6 percentage points in May at 12.3%. Non-residents made net sales of EUR 4.3 million in Slovenian equities, and net purchases of EUR 161.4 million in Slovenian debt securities. The withdrawal of non-residents from Slovenian equity was the result of a major sale of shares in a young advertising company by residents of Luxembourg, while other non-residents were to a lesser extent net purchasers of shares listed on the prime market. Most notable in this regard were net purchases of shares in Krka and Mercator by Croatian residents. Residents of Luxembourg made major net purchases of Slovenian debt securities, partly as a result of the issue of three short-term treasury bills. Residents of Belgium replaced long-term Slovenian government securities with short-term securities.

Slovenian residents made net purchases of EUR 29.2 million in foreign equities and net sales of EUR 84.3 million in foreign debt securities in May. Insurance corporations, pension funds and other financial intermediaries made net purchases of shares, primarily from the euro area, while the household sector made net sales, primarily in shares issued in the US. The banking sector and the sector of insurance corporations and pension funds made a net disinvestment of EUR 75.2 million from bonds issued in the rest of the world, most notably euro area bonds.

As a result of global risk aversion and the migration of funds to safer investments, the domestic mutual funds' assets under management declined by 4.5% in May to EUR 1,804 million. The average unit price fell by 3.9% during the month, taking the year-on-year change to -9.9%. The household sector accounted directly for just over half of the domestic mutual funds' total assets under management in May, and also for some assets indirectly, via the insurance corporations and pension funds sector, which accounted for just under a third of assets under management. All the types of mutual fund recorded net withdrawals, which amounted to EUR 23 million, equivalent to 1.2% of assets under management in the previous month. Investors made net withdrawals of EUR 11 million from balanced funds and EUR 8.7 million

from equity funds. These two types of funds, which invest primarily in shares, still accounted for 94% of all mutual funds' assets under management in May. Despite long-term investment life insurance policies, the insurance sector surprisingly recorded net withdrawals from mutual funds in the amount of EUR 8 million. The household sector recorded an additional EUR 9.5 million of net withdrawals, having made monthly net withdrawals for two consecutive years already. Alongside the low increase in bank deposits and the net direct disinvestment from the rest of the world, this was an indication of the deterioration in the economic position of the household sector. The proportion of the domestic mutual funds' assets under management accounted for by liquid assets² remained unchanged at 11.6%.

² Liquid assets include cash, deposits, money-market instruments and government bonds.

IV. NOTES ON METHODOLOGY

General notes

Sectors

For data from 30 April 1999 onwards, a sectorization has been implemented according to the Regulation on Introduction and Implementation of Standard Classification of Institutional Sectors (hereinafter SKIS), published in the Official Gazette No. 56/98. SKIS, which implemented a national standard for economic sectorization, based on the European System of Accounts 95 and is in accordance with the System of National Accounts 93. According to SKIS, the economy is divided into the following sectors: non-financial corporations, financial corporations (central bank, commercial banks, and other financial institutions), general government, households, non-profit institutions serving households, and the external sector (non-residents).

The external sector comprises non-residents; the domestic sector, residents.

Residents of the Republic of Slovenia are defined as:

- companies and other legal entities with a registered office in the Republic of Slovenia, not including their branches abroad;
- branches of foreign companies entered in the Register of Companies of the Republic of Slovenia;
- sole proprietors or natural persons independently performing business activities as their primary occupation, with a registered office in the Republic of Slovenia or having permanent residence in the Republic of Slovenia;
- natural persons with permanent residence in the Republic of Slovenia;
- natural persons temporarily residing in the Republic of Slovenia, holding a residential or working visa valid for no less than six months; and
- diplomatic, consular and other representative offices of the Republic of Slovenia abroad which are financed from the Budget, as well as Slovene citizens employed at these representative offices and their family members.

All other persons and entities shall be deemed non-residents.

The domestic sector is broken down to the monetary sector and non-monetary sectors. The monetary sector consists of the Bank of Slovenia and other monetary financial institutions (banks, savings banks and money market funds). Domestic monetary financial institutions, owned by both residents and non-residents, are included.

Non-monetary sectors are: non-financial corporations, non-monetary financial institutions, general government, households, and non-profit institutions serving households. Non-financial corporations (enterprises) are legal persons – market producers of goods and non-financial services.

The non-monetary financial institutions sector comprises other financial institutions. Other financial institutions are: other financial intermediaries, except insurance corporations and pension funds (mutual funds, investment funds and financial leasing companies), financial auxiliaries (securities brokers/dealers, stock exchanges) and insurance corporations and pension funds.

The general government consists of the central government (administrative departments of state and central government agencies), local government (local administration, local agencies) and social security funds.

“Households” refers to resident individuals as consumers, resident individuals as sole proprietorships, and partnerships being market producers and having no independent legal status. The data of the latter, prior to 30 April 1999, were included in the enterprises sector.

Non-profit institutions serving households are clubs, political parties, trade unions, churches or religious societies, humanitarian and charity organizations, and professional societies.

Characteristics of the data

- The data present stocks of assets and liabilities at the end of the period.
- Data on stocks denominated in foreign currencies are converted into domestic currency using the official end-of-period middle exchange rate.
- Data in tables are not seasonally adjusted.

Table: Republic of Slovenia: General Information

The table shows basic general data on Slovenia and its economy. In the "Latest actual" column, the latest available data for the current year are published. Sources of the data are the Bank of Slovenia, the Ministry of Finance and the Statistical Office of the Republic of Slovenia.

1. MONEY AND MONETARY FINANCIAL INSTITUTIONS

Data in all tables present stocks items at the end of the period. Last published data are preliminary.
The change in the reporting could cause some inconsistencies in conceptual definitions of some items in the year 2005 data.

Until the end of December 2006 the data is published in the currency SIT, from 1 January 2007 the data is published in the currency EUR. The currency EUR in the data until the end of December 2006 is considered as foreign currency, from 1 January 2007 as domestic currency.

Change of Methodology

In May 2006 the tables of the Money and Monetary Financial Institutions chapter, have been changed. Structurally similar tables are based on the methodology of the European Central Bank (ECB) or of the euro area and no more on the methodology of the International Monetary Fund. The data source for the data of the MFI's in the changed tables is the report of the monetary financial institutions and not the bookkeeping report of the banks and savings banks. The main methodological changes are explained below.

The data from the new tables is available since December 2004, while the time series of the old tables up to March 2006 are still available on the Bank of Slovenia internet page (<http://www.bsi.si/en/>).

The main differences between the methodology of the ECB and the tables in the monthly bulletin up to April 2006 are as follows:

- The sector of the monetary financial institutions, MFI, contains banks, savings banks, savings and loans undertakings and money market funds, but it does not include old LB in KBM banks, while the banking sector without savings banks, savings and loans undertakings and money market funds but with the old LB and KBM is presented in the old bulletin tables.
- Balance sheet total according to the ECB's methodology differs from the balance sheet total according to the IMF's methodology mainly because of the different treatment of the loans. The loans are recorded on gross basis in the new tables and net of provisions in the old set. Consequently the stock of the loans is different.
- There is a difference among the stock of the items loans and deposits and debt securities – among the claims and liabilities, because of the inclusion of the negotiable/non-negotiable securities into the items loans/deposits and debt securities. According to the ECB's methodology, the non-negotiable debt securities are included into the loans/deposits and the negotiable debt securities into the debt securities.
- According to the ECB's methodology, the deals by procuration and internal affairs are included on a net basis, while before they were shown on a gross basis.
- There are differences in the composition of monetary aggregates according to national definition and harmonized monetary aggregates according to the ECB's definition that are described below.

Since April 2006 the data of the specific balance sheet items (loans, deposits, securities other than shares and issued debt securities) are in line with the ECB's request recorded according to their nominal values. The nominal value of a specific instrument is an amount of the principal, which is owed by the debtor to the creditor:

- loans: unpaid principal, not included the accrued interest, the commissions and other expenses,
- deposits: amount of the time deposits, the accrued interest not included,
- debt securities: nominal value.

Interest, which is subscribed to the principal and thus increases it, is the component of the nominal value.

Description of the balance sheet instruments

Below is a short description of the balance sheet aggregate items or instruments, as defined by the European Central bank:

Cash

Holdings of domestic and foreign banknotes and coins in circulation that are commonly used to make payments.

Loans

For the purposes of the statistical reporting scheme, this item consists of funds lent by reporting agents to borrowers, which are not evidenced by documents or are represented by a single document (even if it has become negotiable). It includes assets in the form of deposits, bad debt loans, in respect of which repayment is overdue or otherwise identified as being impaired, traded loans, subordinated debt in the form of deposits or loans and claims under reverse repos. The stock of loans is included into the item according to the "gross" principle.

Securities other than shares

Holdings of securities other than shares or other equity, which are negotiable and usually traded on secondary markets or can be offset on the market, and which do not grant the holder any ownership rights over the issuing institution. Besides negotiable debt securities this item includes: negotiable loans that have been restructured into a large number of identical documents and that can be traded on secondary markets and subordinated debt in the form of debt securities. The item does not include the accrued interest – which are classified into the item remaining assets, except when the separation is not possible (when the interest is the inseparable part of the market price).

Shares and other equity

Holdings of securities which represent property rights in corporations or quasi-corporations. These securities generally entitle the holders to a share in the profits of corporations or quasi-corporations and to a share in their own funds in the event of liquidation. Mutual fund shares and money market fund shares/units are included here.

Remaining assets

This item may also include: financial derivative positions with gross positive market values, non-financial assets (tangible or intangible), accrued interest receivable on loans and securities, the surplus from the deals by procuration, internal affairs.

Deposits

Amounts owed to creditors by reporting agents, other than those arising from the issue of negotiable debt securities. Deposits also cover loans as liabilities of MFIs, which represent amounts received by MFIs that are not structured in the form of deposits, non-negotiable debt securities issued, liabilities for the loans received and where they are not separately stated also deposits redeemable at notice, repos and traded loans.

Debt securities issued

Securities other than equity issued by reporting agents, which are negotiable and usually traded on secondary markets or which can be offset on the market, and which do not grant the holder any ownership rights over the issuing institution, and the subordinated debt issued by MFI's in the form of the debt securities. The accrued interest are not included in the stock data, but classified to the remaining liabilities. The amount of debt securities is shown net of own purchase.

Capital and reserves

This category comprises the amounts arising from the issue of equity capital, including also non-distributed benefits or funds, specific and general provisions against loans, securities and other types of assets. The item is adequately netted for the own shares owned. This item also includes the difference between the revenues and expenditures during the year and the money market fund shares/units issued.

Remaining liabilities

The remaining liabilities consist of accrued interest payable on deposits and debt securities, provisions representing the liabilities vis-à-vis third persons, gross amounts payable in respect of transit items, financial derivative positions. The surplus of the liabilities over claims from the deals by procuration, internal affairs is also included here.

Tables

In May 2006 the tables from 1.1. to 1.8 have been changed and substituted with the new ones, which enables partial continuity of the old time series.

The entry to the euro area (on 1.1.2007) caused a break in the time series of the statistical tables in the Monthly bulletin in cases where the "currency" is an attribute. An expected reclassification of the data between the individual columns in the tables, which keep the same name takes place, for example of the stock of outstanding loans in euros from the time series of "foreign currency" before the introduction to the time series of "domestic currency" after the introduction of euro. To enable easier reconstruction of this change, the shares of the Euro amounts in stocks of the foreign currency on 31.12.2004, 31.12.2005 and 31.12.2006 are published in the Methodological notes for the tables 1.3, 1.4, 1.5 in 1.6, where the reclassification occurred.

Note 1: With the publication of April 2011 data the corrected time series on Deposit with agreed maturity and Deposit redeemable at notice (Tables 1.2., 1.4., 1.6.) were published for the period January 2009 to May 2010 due to the change on the source of the data.

Table 1.1.: Monetary Aggregates

The table shows stock data at the end of month for monetary aggregates M1, M2 and M3, calculated according to the definition of the European Central Bank.

The main characteristics of monetary aggregates under the ECB's definition:

- Inclusion of liabilities of MFI sectors to EMU non-monetary sectors,
- Exclusion of the monetary neutral sector (the central government has the status of a monetary neutral sector),
- Limited maturity of items included (liabilities of up to 2 years and deposits redeemable at notice of up to 3 months only),
- Equal treatment of the liabilities in domestic and foreign currency,
- Inclusion of the money market fund shares/units into M3.

Composition of monetary aggregates, as defined by the ECB is:

- M1 contains currency in circulation and overnight deposits,
- M2 includes beside M1 also deposits with agreed maturity of up to 2 years and deposits redeemable at notice of up to 3 months,
- M3 includes M2, repurchase agreements and debt securities with the maturity of up to 2 years and money market fund shares/units.

The table is split into two parts: the first part (before the entry of Slovenia into EMU until the end of December 2006) presents Monetary aggregates of Slovenia and the second part (after the entry of Slovenia into EMU from 1 January 2007 onwards) presents the contribution of Slovenia to monetary aggregates of EMU.

The item 'Currency in circulation' is calculated on the basis of the Capital Share Mechanism (CSM) which foresees the split of the total amount of issued banknotes in the euro area between the different national central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins (which are in fact the liability of the central government) are added to the total amount of banknotes. The item 'Cash' held by the MFIs is deducted from the total amount of currency (banknotes and coins).

The contribution of the Slovenia to the euro area monetary aggregates does not represent monetary aggregates of Slovenia. The concept of residency is the one of the euro area. Due to the consolidation within the MFI sector on the level of euro area countries the aggregate M3 could become smaller than M2.

Table 1.2.: Consolidated Balance Sheet of the Monetary Financial Institutions

The table shows the end of the month consolidated balance sheet of Bank of Slovenia and other monetary financial institutions, presented in the tables 1.3. and 1.4. The bilateral claims and liabilities of the sectors S.122 and S.121 are netted out. On the liability side of the balance sheet the liabilities to the central government sector (S.1311) in certain items are excluded and are included in the remaining liabilities.

The item 'Banknotes and coins' is for series after 1 January 2007 calculated on the basis of the Capital Share Mechanism (CSM) which foresees to split of the total amount issued in the euro area between the different National central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins (which are in fact the liability of the central government) are added to the total amount of banknotes.

Table 1.3.: Balance Sheet of the Bank of Slovenia

The table shows the Bank of Slovenia's assets and liabilities at the end of month in line with the methodology of the ECB. According to the ECB's methodology the item 'Banknotes and coins' includes the data of coins in circulation (which are in fact the liability of the central government) and excludes the data of issued payment notes, which are included in the remaining assets.

The item 'Banknotes and coins' is for series after 1 January 2007 calculated on the basis of the Capital Share Mechanism (CSM) which foresees to split of the total amount issued in the euro area between the different National central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins are added to the total amount of banknotes.

no.	table	column	sector	title	share of euro		
					31.12.2004	31.12.2005	31.12.2006
1	1.3.	assets/ 3		Claims on foreign sectors (foreign assets)/ Foreign cash	58%	48%	54%
2	1.3.	liabilities/ 4		Liabilities/ Deposits/ Domestic sectors/ Other MFIs/ Foreign currency	100%	100%	-

Table 1.7.: Balance sheet of the Bank of Slovenia – by instruments

The table shows the data of the balance sheet of the Bank of Slovenia, split by instruments of the monetary policy. The table is composed according to accounting rules of the ECB and differs from the table 1.3. Balance Sheet of the Bank of Slovenia, which is composed according to the statistical methodology of the ECB.

Table 1.8.: Investment funds

General

Methodology of investment fund statistics in Slovenia is based on Regulation (EC) No 958/2007 of the ECB of 27 July 2007 concerning statistics on the assets and liabilities of investment funds and Guideline of the ECB of 1 August 2007 on monetary, financial institutions and markets statistics (recast). Time series in tables are available from December 2008 on, when the new reporting of investment funds was introduced. The data is revised when publishing data for the next period.

Note 1: Financial sectors comprise Bank of Slovenia, other monetary financial institutions (banks, saving banks and monetary funds) and other financial institutions (other financial intermediaries, except insurance corporation and pension funds, financial auxiliaries and insurance corporations and pension funds).

Note 2: Non-financial sectors are formed by non-financial corporations, general government, households and non-profit institutions serving households.

Note 3: Monetary funds are included in the sector of other monetary financial institutions and not in the other financial intermediaries, where investment funds are classified.

Deposit

This item consists of transferable deposits (sight deposits) and other deposits. Other deposits are deposits, which cannot be used for payments and cannot be exchanged for transferable deposits without significant constraints or extra costs. They comprise deposits with agreed maturity, certificates of deposits, which are non-tradable or whose tradability, although theoretically possible, is very limited and other non-transferable deposits.

Debt securities

Debt securities are short-term or long-term.

Short-term ones include all instruments of monetary market with original maturity of one year or less.

Long-term debt securities are securities with original maturity of more than one year and include bonds, instruments of monetary market with original maturity of more than one year and other debt securities.

Interest-bearing securities are shown including interests. In case interests cannot be included with debt securities, they are shown separately under the item other assets.

Shares and other equity

The item includes shares and units/shares of investment fund.

Shares are financial assets, which represent the right of ownership to the joint-stock companies. These financial assets usually give the owners the right to certain share in profit of the joint-stock companies and to certain share in their net assets when winding up.

Units/shares of investment fund include units or shares of open-end and closed-end investment funds.

Other assets

Under this item the claims on sold or mature investment, claims on Asset Management Company and trustee, interest and dividend claims, claims on securities' obligations, other corporate claims, accruals and prepaid expenditure are reported. Accruals and prepaid expenditure include deferred expenses or costs, short-term accrued revenues and also deferred interests.

Financial derivatives are either financial assets or financial liabilities; in balance sheet they are recorded as unnetted.

Loans

The item includes loans borrowed, covering loans, repurchase agreements and other forms of loan as techniques and tools for managing the investments of investment funds.

Investment fund shares/units

Investment fund shares/units represent total liability to shareholders or investors of investment fund.

Other liabilities

The item other liabilities include corporate liabilities of investment fund, namely liabilities from financial instruments' purchase, management liabilities, tax liabilities, liabilities of distribution of profits or other payments to holders of units or shareholders, other corporate liabilities, accruals and income collected in advance and financial derivatives.

Accruals and income collected in advance include accrued costs or accrued charges and prepaid income. Under this item deferred interests are also reported.

2. FINANCIAL MARKETS AND PAYMENT SYSTEMS

Interest rates (tables 2.1–2.4)

Table 2.1: Bank of Slovenia Interest Rates

Lombard loan: Within the framework of a standing Lombard facility, the Bank of Slovenia provides one-day Lombard loans to banks and savings banks with securities used as collateral. The pledged securities should amount to 110% of the amount of the Lombard loan.

The *repo interest rate* for the temporary purchase of treasury bills and tolar and foreign currency bills of the Bank of Slovenia with obligatory repurchase in seven days was the weighted arithmetic average of daily repo interest rates until March 2004 (effective interest rate). The new seven-day repo was introduced in March 2004; it is offered on a closed basis. The interest rate given is the latest valid interest rate.

Interest rate on banks' obligatory reserves: 1 percent per year since October 1991.

The overnight-deposit interest rate is an interest rate applying to deposits placed by banks and savings banks on an overnight term with the Bank of Slovenia.

Long-term deposit at the Bank of Slovenia was established in July 2004. The variable interest rate is defined once every two months for the next two-month period. It refers to the interest rate for 60-day tolar bills valid at the time of quotation, increased by 0.2 percentage points.

Tolar bills are registered securities subscribed by banks and savings banks with a maturity of 60 or 270 days. Sixty-day bills are offered on a permanent basis; 270-day bills were sold by auction until February 2004, and since then have been offered on a closed basis. Interest rates for tolar bills are given nominally; in the case of auctions they are effective rates. Offers of 270-tolar bills have been frozen since November 2004.

Foreign currency bills are transferable registered securities not issued in series. They are offered on a permanent basis and can be purchased by banks (or by other legal persons through banks until 3 May 2000). They are sold for euros (or German marks until February 1999, or U.S. dollars until June 2006) at a discount with maturities of two to four months.

A *penalty rate* is generally employed in cases of overdue payments. The penalty rate has been determined by the Law on the Legal Penalty Rate since 28 June 2003.

Interest rates for a certain type of instrument in the table are those last valid in a period (except in the case of effective interest rates). The annual averages of interest rates are computed as simple arithmetic averages of monthly data, if such data are available.

Table 2.2: Interbank Money Market Rates and Indexation Clause

Interbank market

SIONIA/SITIBOR

Until 31 December 2006, the figures are annual nominal interest rates for unsecured Slovenian tolar deposits on the Slovenian interbank market. The interest rate for overnight deposits (SIONIA) is the weighted average interest rate for overnight deposits.

SITIBOR is the rate at which Slovenian interbank term deposits are offered by one prime bank to another prime bank.

SIONIA and SITIBOR were valid from 14 July 2003 to 31 December 2006. Break of series in January 2007.

EONIA/EURIBOR

Eonia® (Euro OverNight Index Average) is the effective overnight reference rate for the euro. It is computed as a weighted average of all overnight unsecured lending transactions undertaken in the interbank market, initiated within the euro area by the contributing banks.

The Euro Interbank Offered Rate – “Euribor®” – is the money market reference rate for the euro. It is sponsored by the European Banking Federation, which represents the interests of 4,500 banks in 24 Member States of the European Union and Iceland, Norway and Switzerland, as well as the Financial Markets Association. Euribor® is the rate at which euro interbank term deposits are being offered within the EMU zone by one prime bank to another.

Indexation clauses

TOM

The tolar indexation clause (TOM) is an annual interest rate calculated by the Statistical Office of the Republic of Slovenia and used for preserving the value of financial liabilities and assets in domestic currency.

TOM (monthly): since 5 August 1995, the average of the previous 3 months' inflation. (Until June 1995, indexation was based on the so-called R, which was equal to the previous month's inflation rate; from 1 June to 4 August 1995, indexation

was based on the average of the previous 3 months' inflation.) From February 1996, 4 months; from December 1996, 6 months; and from May 1997, 12 months. Financial liabilities and assets in domestic currency with maturity less than 1 year have not been revalued since July 2002.

Foreign exchange indexation clause USD and CHF

The monthly rate is the growth rate of the end-of-month exchange rate for USD and CHF.

The annual rate is computed from the monthly rate on the conform basis, taking into account the actual number of days in the month and the year.

Table 2.3: European Central Bank Interest Rates

Counterparties can use the **deposit facility** to make overnight deposits with the NCBs. The interest rate on the deposit facility normally provides a floor for the overnight market interest rate.

Main refinancing operations are regular liquidity-providing reverse transactions with a frequency and maturity of one week. They are executed by the NCBs on the basis of standard tenders and according to a pre-specified calendar. The main refinancing operations play a pivotal role in fulfilling the aims of the Eurosystem's open market operations and provide the bulk of refinancing to the financial sector.

Counterparties can use the **marginal lending facility** to obtain overnight liquidity from NCBs against eligible assets. The interest rate on the marginal lending facility normally provides a ceiling for the overnight market interest rate.

Table 2.3.1.: Harmonised long-term interest rates for convergence assessment purposes

The long-term interest rate statistics refer to the monthly average interest rates for long-term government bonds issued by the central government, quoted as percentages per annum.

The fourth Maastricht criterion is based on the level of long-term interest rates. Article 4 of the Protocol on the convergence criteria, as referred to in Article 121 of the Treaty, states that compliance with the fourth convergence criterion "shall mean that, observed over a period of one year before the examination, a Member State has had an average nominal long-term interest rate that does not exceed by more than 2 percentage points that of, at most, the three best performing Member States in terms of price stability. Interest rates shall be measured on the basis of long-term government bonds or comparable securities, taking into account differences in national definitions."

The European Central Bank and the European Commission have, together with the national central banks, identified the representative debt securities that can be used to measure long-term nominal interest rates and, if necessary, alternative long-term interest rate indicators where suitable government bonds are not available.

Data until December 2006 refer to the yield to maturity on a reference long-term general government bond, issued in Slovenian tolars and with a nominal interest rate. Since 1.1.2007 the data show the yield to maturity on a basket of long-term general government bonds, issued in euro and with a nominal interest rate.

Until 2003 a yield to maturity on a primary market is presented, and afterwards a yield to maturity on a secondary market.

2.4: Monetary Financial Institutions Interest Rates

Data from January 2003–April 2005

Estimates on MIR statistics refer to interest rates on new business applied by the eight biggest resident banks (selected by balance-sheet-total criterion) to loans denominated in Slovenian tolars vis-à-vis domestic households and non-financial corporations.

Interest rates are calculated as a weighted average of all interest rates on new business in the instrument category.

Loans to non-financial corporations (breakdown by amount category): loans in SIT are converted into EUR by the monthly average exchange rate and then classified according to amount up to and including EUR 1 million, or over EUR 1 million.

"Loans to households for other purposes" include only loans to sole proprietors for current and capital assets.

Data on APRC in the period from January to August 2003 refer to six respondents, and from August 2003 to December 2003, to seven out of eight total respondents.

Data from May 2005–December 2006 covers business conducted in SIT by the total MFI population in Slovenia.

MFI interest rate statistics cover those interest rates that resident monetary financial institutions (MFIs, i.e. "credit institutions") apply to euro-denominated deposits and loans by households and non-financial corporations which are residents of the euro area.

The legal requirements for MFI interest rate statistics are laid down in Regulation ECB/2001/18, which defines the statistical standards according to which monetary financial institutions must report their interest rate statistics. This regulation is complemented by the Manual on MFI Interest Rate Statistics, which further clarifies and illustrates the statistical requirements. The MFI interest rate statistics refer to the interest rates individually agreed between a credit institution or other institution and its customer. They are converted to an annual basis, taking into account the frequency of interest payments, and are quoted in percentages per annum. At the euro area level 45 interest rate indicators with the corresponding volumes are collected, of which 31 refer to new business and 14 to outstanding amounts.

Outstanding amounts are defined as the stock of all deposits placed by customers, i.e. households and non-financial corporations, with credit institutions or other MFIs, and the stock of all loans granted by credit institutions to customers. An interest rate on outstanding amounts reflects the weighted average interest rate applied to the stock of deposits or loans in the relevant instrument category in the time reference period. Interest rates on outstanding deposits cover all deposits placed and not yet withdrawn by customers in all periods up to and including the reporting date. Interest rates on outstanding loans cover all loans used and not yet repaid by customers in all periods up to and including the reporting date, although excluding bad loans and loans for debt restructuring at rates below market conditions. MFI interest rates on outstanding amounts are hence statistics on the interest rates actually applied to all "open" deposits and loans.

New business is defined as any new agreement between the household or non-financial corporation and the credit or other institution. New agreements comprise all financial contracts, the terms and conditions of which specify for the first time the interest rate on the deposit or loan, and all new negotiations of existing deposits and loans. The prolongation of existing deposit and loan contracts which are carried out automatically, i.e. without any active involvement of the household or non-financial corporation, and which do not involve any renegotiating of the terms and conditions of the contracts, including the interest rate, are not considered new business.

The annual percentage rate of charge (APRC) is an effective lending rate that covers the total cost of credit to the consumer, i.e. the interest payments as well as all other related charges. It covers the total cost of credit to the consumer, as defined in Article 18(2) of the Consumer Credit Act. Charges defined in Article 18 of the Consumer Credit Act are excluded. APRC is compiled only for consumer credit and loans to households for house purchases (sole proprietors excluded).

Weighting method: The interest rates on new business are weighted by the size of the individual agreement.

The new interest rate statistics replace the average bank interest rates published by the Bank of Slovenia. The coverage and definition of the new statistics differ substantially from those previously published. Therefore, a direct comparison of the new and old rates is not possible.

* Households = sole proprietorships + individuals + non-profit institutions serving households

**APRC data includes households without sole proprietorships and without non-profit institutions serving households

Note 1: For this instrument category, new business and outstanding amounts coincide.

Note 2: For this instrument category, households and non-financial corporations are merged and shown under the household sector.

Exchange rates (Tables 2.6.1–2.6.2)

Table 2.6.1: Selected Bank of Slovenia Exchange Rates – Average Rates to 31.12.2006

These tables show the Bank of Slovenia middle rates until 31 December 2006. Annual rates are computed as arithmetical averages of monthly rates. Monthly averages are computed as arithmetical averages of daily rates (Sundays and holidays excluded).

A new currency, the Croatian kuna (= 1,000 former Croatian dinars) was introduced on 30 May 1994. The Polish złoty was denominated on 1 January 1995 at the exchange rate of 1 new złoty for 10,000 old złotys.

Table 2.6.2: European Central Bank exchange rates

Reference exchange rates of the European Central Bank are shown, representing middle exchange rates of the Bank of Slovenia. The average yearly and monthly exchange rates are calculated as the arithmetical average of daily exchange rates, excluding days on which the TARGET system was closed. This includes Saturdays, Sundays and the following holidays: New Year's Day (1 January), Good Friday, Easter Monday, Labour Day (1 May), Christmas (25 December) and 26 December.

Conversion rates between the euro and the currencies of EU Member States that have adopted the euro are irrevocably fixed and valid since 1 January 1999 (since 1 January 2001 for the Greek drachma).

The conversion rate for the Slovenian tolar is valid as of 1 January 2007, the conversion rate for the Cyprus pound and Maltese lira as of 1 January 2008 and the conversion rate for the Slovak koruna as of 1 January 2009.

Payment systems (Tables 2.7 to 2.13)

General

Data prior to 2007 are published in tolars; from 2007, data are published in euros.

Due to rounding in Tables 2.11 to 2.15, sums of quarterly data do not always totally comply with relevant yearly data.

Table 2.7: TARGET2 and SEPA internal credit transfer (SEPA IKP) transactions

Note 1: On 1st January 2007 the transaction limit for payments submitted to the Giro Clearing system (multilateral net system for small value payments), raised from EUR 8.354,21 to EUR 50.000.

Note 2: SEPA internal credit transfer system (the SEPA IKP) is operated by the clearing company Bankart d.o.o. SEPA IKP system was established on 4 March 2009. Before SEPA IKP establishment the same transactions were processed in Giro Clearing payment system, operated by Banka Slovenije. Giro Clearing payment system was closed down on 1 August 2009. Data regarding transactions in the Giro Clearing payment system are published until March 2009. Data regarding transactions in both systems are published together (the sum of transactions in the Giro Clearing and SEPA IKP systems) for the period from March to July 2009. Data regarding payments in the SEPA IKP system are published from August 2009 on.

Note 3: Until 29th December 2006 payments data on domestic payments between Slovenian participants are published for domestic Slovenian RTGS system (values in billion Slovenian tolars). As of 1st January 2007 domestic payments of Slovenian TARGET participants represents payments sent from Slovenian credit institutions to another Slovenian payment institution, direct participated in the TARGET system.

As of 19th November 2007 payments in TARGET 2 system are considered.

Note 4: As of 1st January 2007 cross-border payments of Slovenian TARGET participants represents payments sent from Slovenian credit institutions to non-Slovenian credit institutions, direct participated in the TARGET system.

As of 19th November 2007 payments in TARGET 2 system are considered.

Note 5: Gross value is the total value of all payment orders executed in the payment system.

Note 6: Net value is the amount required for the settlement of the gross value of payments in a payment system that uses netting. It represents the sum of the net monetary liabilities of all participants of the payment system to other participants of the payment system, calculated as the positive difference between the payment orders sent to the system and the payment orders received from the system for each participants of the payment system in an individual settlement cycle.

Table 2.8 Payment Cards

Note 1: Credit card: A card indicating that the holder has been granted a line of credit. The credit granted may be settled in full by a specific date each month (delayed debit card, i.e. charge card), or may be settled in part, with the balance taken as extended credit (credit card).

Note 2: Debit card: A card which enables the holder to have purchases directly charged to funds on the cardholder's bank account.

Note 3: Cards issued abroad: Payment cards issued abroad and used for payments in Slovenia, mostly by non-residents.

Note 4: Volume and value of transactions abroad: Use of cards issued in Slovenia for payments abroad.

Number of payment cards in circulation: Number of valid payment cards held by residents and non-residents issued in Slovenia. Data refer to the end of each quarter/year.

Number and value of payments refer to the use of payment cards in each quarter/year.

Domestic card: Payment card issued by banks and enterprises resident in Slovenia without licence agreements with foreign issuers.

Licence card: Payment card issued by banks and enterprises resident in Slovenia under licence agreements with foreign issuers.

Bank card: Payment card issued by banks.

Retailer card: Payment card issued by non-banking institutions, mostly for use at specific retail outlets.

Personal card: Payment card issued to a natural person (family cards included).

Business card: Payment card issued to a legal entity.

Table 2.9 Other Payment Instruments and Innovative Payment Schemes

Note 1: Data refer to the end of each quarter.

Note 2: Prior to 2007 the data refer to payment transactions and money withdrawals at manual POS and EFT POS terminals in Slovenia. From 2007 on, the data on money withdrawals are not included.

Table 2.10 Electronic Banking

Note 1: Only credit transfers debited from payers' accounts are included.

Note 2: Payments by Bank of Slovenia as payment service provider for non-MFI subjects are also included from 2011 on.

Table 2.11 Credit Transfers

A paper-based order is a payment instrument related to a credit or debit transfer, in which the payer submits an order on a paper-based form. In case of credit transfer it means any instruction by an account holder to his payment service provider requesting the transfer of funds from his account to another account (also between accounts of the same account holder). Includes submissions by telefax if they require manual intervention in order to be transformed into electronic payments.

Special payment order is a special form of paper-based payment order, which is issued by a payee (beneficiary) to be paid by the debtor. The special payment order is presented by the payer at the bank, which then debits his transaction account and transfers the amount to the account of the payee, potentially via several other credit institutions as intermediaries and/or one or more payment and settlement systems. A contemporary form can assure automated processing with ICR technology (Intelligent Character Recognition) or classic manual processing.

A non-paper-based credit transfer is any credit transfer which the payer submits without the use of paper forms i.e. electronically. Includes submissions by telefax or other means if they are transformed into electronic payments without manual intervention.

A standing order is a non-paper-based credit transfer and means an instruction from a payer to his bank to make a regular payment of a fixed amount to a named creditor. The payer authorises his bank (the bank at which he maintains a transaction account) to pay a specified amount regularly to another account. The payment must be repeated at least five times. The execution of payments occurs under exact conditions on a particular day of the month.

Direct credit is special form of payment instrument related to a credit transfer, initiated by the payer, which enables a cashless fund transfer from payer to payee. Direct credit is used for the execution of small value payments, e.g., salaries, pensions, dividends and similar payments, to a large number of creditors.

Table 2.12 Debit Transfers

Direct debit is an authorised debit on the payer's bank account initiated by the payee. It is a payment instrument consisting of automatic debiting of the debtor's account for goods and services delivered by the creditor. The debtor (payer) authorises his bank to transfer funds from his bank account to the creditor's account and the creditor to submit a payment order to the creditor's bank to be paid. A typical example is an electricity bill payment.

Note 1: **A special money order was used until the end of 2009.** Special money order was a standardised paper-based debit instrument used to remit money to the named payee. A special money order was issued by a bank, allowing the individual named on the order form to receive a specified amount of cash on demand.

Table 2.13: Network of Commercial Banks

Note 1: Statistical regions, source: Statistical Office of the Republic of Slovenia, 31 March 2000.

Map of Slovenia by Geodetic Institute of Slovenia

Note 2: Data referring to the Post Bank of Slovenia do not include units of the Post of Slovenia that operate for the Post Bank of Slovenia on a contractual basis.

3. BALANCE OF PAYMENTS AND EXTERNAL POSITION

Balance of Payments

General notes

In most respects the Slovenian Balance of Payments (BOP) conforms to the methodology of the IMF's Balance of Payments Manual, fifth edition (1993).

Characteristics of the Data

Minus sign (-) indicates imports or surplus of imports over exports in the current account, increase in assets or decrease in liabilities in the capital and financial accounts, and growth of reserve assets.

Data on transactions are converted from the original currencies to EUR using the daily Bank of Slovenia or ECB's exchange rates, or average exchange rates for the period if the exact date of transaction is not known.

Revision policy

Revision of balance of payments, the international investment position and gross external debt data occur as follows:

Revisions in **monthly data** are published with the release of:

- the following month's data;
- the corresponding quarterly data;
- the corresponding revised quarterly data;
- the international investment position and external debt data for the corresponding year; and
- the revised international investment position and external debt data for the corresponding year.

Revisions in **quarterly data** are published with the release of:

- the following month's data;
- the data on the following quarter;
- the international investment position and external debt data for the corresponding year; and
- the revised international investment position and external debt data for the corresponding year.

Revisions for the **annual** balance of payments, international investment position and external debt data are published with the release of the data for the following years.

Annual data are revised for the year t-1 and t-2. In the case of major methodological changes or discrepancies among the data sources, data for the year t-3 will be revised as well.

Data sources

· **The external trade statistics (Statistical Office of the Republic of Slovenia)** is the main source of data on trade in goods. Since 1 May 2004, the source of data on trade in goods among Slovenia and EU Member States is the Intrastat reporting. The source of data on trade in goods with other countries is the single administrative document (Exstrastat reporting).

· **Reports on account balances and transactions between residents and non-residents (C, PPT, PPV):**

- report on account balances at domestic banks – PPV (until 31 December 2004),
- report on account balances abroad – C (until 31 December 2006),
- report on transactions through accounts at domestic banks – PPT (until 31 December 2008),
- report on transactions through accounts abroad – C (until 31 December 2008).

All banks which conducted international payment transactions and all residents with open accounts abroad were obliged to report. The resident issuer/beneficiary of the payment was obliged to forward data on the type of transaction. Since 2009 only banks which conduct international payment transactions report transactions with nonresidents that exceed threshold EUR 50.000. Data are used for quality control purposes only.

- **Reports on trade in services, part of trade in goods and on current/capital transfers with nonresidents (BST)** are the sources of data on services (excl. travel), data on coverage adjustments of goods item and data on current and capital transfers (excl. transfers with EU budget) from 2008 onwards.
- **Reports on transactions with securities (VRP) and data from the Securities Clearing Corporation (KDD)** are the sources of portfolio investments (debt and equity securities) and financial derivates since 2004.
- **Reports on purchased/sold foreign debt securities without domestic brokers (DVP)** are the sources of portfolio investments in foreign debt securities, carried out without domestic brokers, from 2007 onwards.
- **Data regarding drawn/un-drawn credit transactions from foreign credit registration forms (KR)** are the source of data on loans of all sectors until 2004; in 2005 and 2006 they are only the source for the non-banking sector. A registration was obligatory for all financial credits and long-term commercial credits; since 1997 from the same source are also obtained the data on the purpose of direct payments of foreign lenders, used to settle the obligations of domestic borrowers to other non-residents.
- **Reports on monetary financial institutions (PORFI)** are the source for data on loans, cash and deposits of the banking sector since 2005.
- **Reports on credits received and granted and deposits with non-residents (KRD)** are the source for data regarding loans and deposit of all sectors, except banks, since 2007.
- **Reports on short-term receivables and liabilities from operations with non-residents (SKV)** are the source for short-term trade credits and advances since 2002.
- **Reports on investments (SN)** are until 2007 the source for reinvested earnings of direct investments. From 2008 onwards these reports are source also for all other direct investment transactions in equity and related income as well as for portfolio equity transactions without involvement of domestic dealers.
- **Report on Modern Payment Instruments (SPI)** for data on acquisition of fuel by nonresident transport operators at Slovene petrol stations settled via payment cards of foreign issuers from 2008 onwards.
- **Accounting data of the Bank of Slovenia**
- **Accounting data of banks (KNB)**
- **Budget data on the transactions of government sector between the Republic of Slovenia and EU** (from 2004 onwards)

Quarterly data on financial account's statistics are source for financial derivatives for all sectors except the central bank (since 2007).

- **Estimates and other sources**
 - estimate of purchases of foreign currency and cheques from foreigners in exchange offices (part of the travel category) - until 2004,
 - estimate of expenditures on travel abroad including purchases of goods abroad - until 2004
 - estimate of Italian pensions (IMAD) until the end of 1998,
 - estimate of transactions with foreign currencies and the deposits of Slovene households (until 2006),
 - estimate of labour income (SORS),
 - data on pensions paid to non-residents (ZPIZ),
 - survey on the write-downs of debt from trade in goods and services abroad,
 - estimates for exports and imports of travel - from 2005 onwards (detailed explanation under item Travel),
 - estimate of cash transactions on tourism and labour income (from 2007 onwards),
 - quarterly data on consumption of foreign embassies in Slovenia (SORS, from 2008 onwards),
 - migrants' transfers - outflows (bilateral data between countries, from 2008 onwards),
 - households' transfers (SORS, from 2008 onwards),
 - assets acquired directly by tenders and programmes of EU (SORS, from 2008 onwards),
 - data on nonresidents' investments in real-estate in Slovenia (GURS, from 2008 onwards),
 - data on purchases/sales of real-estate in Croatia (Croatian National Bank, from 2008 onwards),
 - data on direct investment of Slovene households in the form of real estate abroad (main data source Household Budget Survey, SORS)
 - data on purchases/sales of emission allowances between residents and nonresidents (Slovenian Environment Agency, from 2008 onwards until 2011, From 2012 onwards data is collected by BST monthly report).

Current account

Goods

Data regarding general goods can be obtained from the Statistical Office of the Republic of Slovenia. Prior to Slovenia's accession to the EU data were available from standard customs documents. Since 1 May 2004, data are available from single administrative documents for trade in goods with non-EU countries and from Intrastat reports for trade with EU Member States.

Adjustments of CIF/FOB – data on import by CIF value were adjusted to FOB value with the help of a coefficient which is

equal to the weighted average of coefficients between CIF and FOB values of the goods imported (in an available sample), separated with regard to type of goods, type of transport and partner's country. For 2004, a new CIF/FOB coefficient was calculated (1.0306); prior to that the coefficient was 1.0393. Since 2004 on, the coefficient is calculated every year based on a five year average.

Coverage adjustments - made for goods exported and imported without customs declarations (the ITRS source until 2007, the reports of duty free shops and consignment warehouses until 2005, BST reports as source from 2008 onwards). Since 1 May 2004, coverage adjustments also include estimated data on imports of motor vehicles from EU by natural persons not covered by Intrastat System.

Services

Transport

Transportation services are classified according to mode of transport and furthermore according to what is carried. The source of records on transportation services is the ITRS until 2007 and BST reports from 2008 onwards.

Travel - methodology until 2004

The ITRS sources used in the compilation of the "Incoming travel" category include: a.) health- and education-related services; b.) payments made by non-residents to Slovenian tourist agencies; c.) net withdrawals in tolars from non-resident accounts; d.) money spent in casinos by non-residents; e.) data on sales of goods to non-residents in duty-free shops and consignment warehouses; f.) payments with credit cards; and g.) sales of tolars to non-residents abroad.

The data on sales of tolars to non-residents in Slovenia are estimated based on the number of border crossings by foreign travellers and on the number of nights spent in the country by foreign tourists.

Data for the category "Expenditure on travel" come from the ITRS and estimations.

Travel - methodology since 2005 onwards

Main data sources to estimate the **export** of travel are the following surveys and researches conducted by Statistical Office of the Republic of Slovenia (SORS):

- Survey on foreign tourists in summer season is used to define the structure of foreign tourists according to their primary aim of travel (business travel, health care, education, other) and expenditures of each type of foreign tourists ; three-year's survey -last conducted in 2009)
- Survey on foreign travelers (to define the structure of travelers broken down by same-day travelers and transit travelers and their respective expenditures).
- Arrivals and over-night stays of foreign tourists broken down by countries of their residency (monthly survey).
- Number of border crossings (to define the population of foreigners entering Slovenia).

Based on data sources the following six categories of data are calculated and finally broken down by countries using data on mobile phone operators;

- Business travel,
- Health - related travel,
- Education,
- Other,
- Same- day travelers,
- Transit travelers.

Main data source to estimate the **import** of travel is SORS's survey TU_ČAP (Quarterly survey on travel of domestic citizens). The Survey provides the value of expenditures of domestic population traveling abroad (same - day trips and longer trips) and the amount spent for transportation to and from the foreign destination, which is then subtracted from total expenditures in order to avoid double counting (since it is already included in transport services).

Based on TU_ČAP data source the following five categories of data are calculated and finally broken down by countries using data on mobile phone operators;

- Business travel,
- Health - related travel,
- Education,
- Other,
- Same - day travelers.

Construction services

The source of data is the ITRS until 2007, all construction undertakings are recorded under construction services on net basis (the revenues earned on works performed abroad are recorded net of the corresponding expenditures). From 2008 onwards the sources of data on construction services are BST reports.

Insurance services

Premiums on life and non-life insurance are split into two components: (i) the service charge included in insurance services; and (ii) the premium in a narrow sense, recorded as a current transfer. The calculation of the service charge is based on a fixed percentage of premium payments. The source of data on insurance services is ITRS until 2007, this source was replaced by BST reports for 2008 data onwards. Insurance services include commissions of insurance companies and 45 % of premium payments. Insurance claims and other part of nonlife insurance premiums are included in current transfers, claims and part of life insurance premiums represent assets/liabilities of financial account.

Government services

All transactions settled through the accounts of Slovenian embassies abroad, as well as transactions coded as government

services settled through the accounts of Slovenian banks with foreign correspondents, are included in this item until 2007 with the ITRS as the source of data. From 2008 onwards the source of data is BST report, government services include all services of slovenian representative bodies abroad. From the same year there are included data on consumption of foreign embassies in Slovenia. Data are provided by SORS (on the basis of taxation data).

Also for all other types of services the ITRS source has been discontinued as of 2008, when the new source (BST report) for data on trade in services (excl. travel) has been introduced.

Income

Labour income – receipts. Since 2002, data from the Labour Force Survey (SORS) and Eurostat data have replaced ITRS and estimates as sources of labour income for the work of Slovene residents abroad.

Labour income - expenditures. ITRS is the source for labour income - expenditures until 2004. Data relating to 2005 onwards are provided by SORS on the basis of Labour Office register for the number of nonresidents, who at the end of each quarter possess valid work permits and who actually worked in Slovenia less than one year and data by The Health Insurance Institute of Slovenia for nonresidents, who at the end of each quarter don't need valid work permits and who actually worked in Slovenia less than one year. Data on daily migrant workers from Austria, Italy, Hungary and Croatia are also included.

Since 2002, labour income (receipts and expenditures) is included according to the gross principle (including taxes and social contributions).

Capital income – Since 2004, VRP reports have replaced ITRS as a source for income from equity securities. Annual reports on capital investments are the source for data regarding reinvested earnings. Data on reinvested earnings in the current year are estimated - (a three year monthly average of actual data on total earnings, less extraordinary incomes [the source being annual reports on investments], is decreased by dividends and other incomes, paid in the current month (the source being monthly reports on investments from 1.1.2008 onwards, previously the source was ITRS). The estimate is replaced by actual data only when these data are available. Data on disproportionately large exceptional payments of profits relative to the recent level of dividends and earnings (superdividends) are excluded from income and included in direct investment as withdrawals of equity (from 2008 onwards). Until 2003, the source of income from debt securities was ITRS; since 2004 the sources are reports on securities transactions (VRP reports) and KDD data. Until 2004, the source on income from other investments was ITRS for the banking sector; the source was later changed to reports on monetary financial institutions (PORFI). Until 2006, the source on income from other investments for the non-banking sector was ITRS; since 2007, the source is KDD reports. Income from loans (including long-term commercial credits) and cash reserves have been managed according to the accrual principle since 2002; since 2007, total income from other investments is managed according to the same principle. Since 2004, the accrual principle is used for income from bonds and notes.

Current transfers

Current transfers of other sectors are subdivided into workers' remittances, insurance and other transfers. Current transfers of the government sector and other transfers of other sectors are from 2002 onwards subdivided into taxes, subsidies, social contributions, social benefits and other transfers. The main data sources are the ITRS and estimates until 2007, from 2008 onwards the sources are BST reports and from 2004 onwards, data on EU transfers of the government sector are obtained directly from the Ministry of Finance (budget data). Migrants' transfers - outflows (data provided by foreign central banks) and transfers of households (SORS survey) are included from 2008 onwards.

Capital and financial account

Capital account

Capital transfers

The ITRS is the source of data until 2007. Migrants' transfers cover not only payments recorded by domestic banks, but also the changes in residency of accounts held with these banks. From 2008 onwards data are obtained from BST reports, but data on capital transfers between the Republic of Slovenia and the EU are from 2004 onwards obtained directly from the Ministry of Finance (budget data). Since 2002, the Bank of Slovenia also estimates the value of write-downs of debt from trade in goods and services abroad. From 2008 onwards, there are also included data on assets acquired directly by tenders and programmes of EU (SORS, Annual survey on investment in tangible assets).

Financial account

Direct investment

Direct investment is until 2007 recorded on the basis of reported payments through domestic banks and data from customs declarations, from 2008 the source is direct monthly report SN. Data on reinvested earnings are based on yearly surveys on balance and transactions with affiliated enterprises (SN) and are included monthly as one-twelfth of the yearly figure. Data regarding reinvested earnings for the current year are estimated. Until 1997, the purchase and sale of all shares and equity were included in this item. Data on disproportionately large exceptional payments of profits relative to the recent level of dividends and earnings (superdividends) are included in direct investment as withdrawals of equity (from 2008 onwards).

From 2007 onwards, data on foreign direct investments of households in the form of real estate are included.

From the beginning of 1997, purchase and sale of shares that assure more than 50 percent of a company's equity (a controlling interest of shares) and shares issued by domestic companies on the primary markets with the purpose of increasing the nominal capital of the company are included in this item, due to capital control measures. With the new Foreign Exchange Act in 1999, the 10% rule is applied to direct investment. Data of Surveying and Mapping Authority of the Republic of Slovenia on nonresidents' investments in real-estate in Slovenia are included from 2008 onwards. From the same year data on Slovenian residents' purchases/sales of real-estate in Croatia are included (data source is Croatian National Bank).

Since 2001, there is a break in the data series in the category "Direct Investments - Other Capital". Since that time, loans and long-term commercial credits between affiliated companies (10% or more of capital share) are included in this category. Until 2000, these types of transactions were included in the category "Other Investments". Since 2002, the category "Direct Investments - Other Capital" also includes short-term commercial credits between affiliated companies. Since 2005 other capital claims / liabilities does not include banking sector's claims/liabilities with direct investment relationship (these data are included in item other investment/loans).

Portfolio investment

Transactions are divided into assets and liabilities, with further breakdown into equity and debt portfolio investment. Until 1997 only data on sales and purchases of debt securities through banks were included in this item. Since February 1997 the equity securities with the exception of direct investment are included in this item too. With the new Foreign Exchange Act in 1999, portfolio investment transactions include all transactions below the 10% rule. Equity portfolio investment to individual sectors is subdivided into mutual funds and other investment. VRP and KDD data are the main sources from 2004 onwards. Since 2007 on this item includes also assets of debt portfolio instruments held by Bank of Slovenia, which are no longer considered as international reserves, but as claims to EMU member states and claims in EUR currency to all other nonresidents. From 2007 onwards data on transactions in assets of foreign debt instruments that occur without involvement of domestic dealers are collected on a report DVP, and from 2008 onwards assets and liabilities in portfolio equity investments deriving from transactions without involvement of domestic dealers are collected on report SN.

Financial derivatives

From 2004 until 2006 these types of transactions are included in VRP and KDD sources. Since 2007 quarterly data on financial account's statistics are source for financial derivatives for all sectors except the central bank. From 2009 onwards financial derivatives of Bank of Slovenia are included in other investment/financial derivatives item or international monetary reserves item (depending on the residency of the counterpart).

Other investments

Short-term trade credits

Until 2002, short-term trade credits were estimated based on the following calculation:

- [(export of goods FOB + coverage adjustments - (export payments + free export of goods + direct investments in goods + drawings of granted long-term trade credits))]
- [(import of goods FOB + coverage adjustments - (import payments + free import of goods + direct investments in goods + drawings of received long-term trade credits))]

Since 2002, short-term commercial credits and advances are included based on SKV reports. Short-term trade credits between affiliated companies are included in direct investments.

Loans and long-term trade credits

From 2001 onwards, inter-company debt transactions between affiliated enterprises (10% or more capital share) are not recorded as loans, but are recorded as direct investment – other capital transactions. Loans (including long-term trade credits) and related income have been calculated according to the accrual principle from 2002 onwards, and according to the cash principle prior to 2002. From 2005 onwards claims/liabilities of banking sector regardless of capital affiliation to nonresidents are included in this item (the direct investment relationships are not distinguished in the data source).

Currency and deposits

Until the adoption of Euro currency (1.1.2007) the foreign currency of residents is estimated based on the following formula: deposited currency and cheques on foreign currency accounts of individuals - withdrawals of cash and cheques from foreign currency accounts of individuals + the estimated net purchase of foreign currency by residents + estimated expenditures for tourist travel abroad + estimated expenditures of tourist travel to the former Yugoslavia + the estimated purchase of goods abroad - estimated labour expenditures abroad - estimated Italian pensions (until the end of 1998) + net withdrawals from non-resident accounts in local currency + the change of deposit balances of residents on accounts at BIS Member State banks (before 2002).

From the adoption of Euro currency (1.1.2007) onwards item foreign currency of households is estimated by using data on net inflows of foreign currency from tourism, data on net income on compensation of employees (decreased by consumption abroad/in the economy) and BIS (Bank for International Settlements) data on deposits held by residents with the banks abroad.

Since 2002, the category "Accounts Abroad of Other Sectors" also includes BIS data regarding deposits of residents on accounts at BIS Member State banks.

With adoption of EUR in 2007 as a national currency Slovenia became a member of EMU which affects the following changes in currency and deposits item;

- the item currency and deposits/ claims includes also estimated counterpart of the transactions in cash in current account of the balance of payments (tourism and labour income),
- claims of the Bank of Slovenia to EMU member states and all claims in EUR currency to all other states are included in the item currency and deposits/ claims.
- net position of the Bank of Slovenia to the Eurosystem (net result of incoming and outgoing payments conducted in EUR

currency through TARGET and STEP2 system) is included in the item currency and deposits/ other liabilities.

International monetary reserves

Reserve assets and related income have been calculated according to the accrual principle from 2002 onwards, and according to the cash principle prior to 2002.

Following Slovenia's entry to the EMU in 2007, claims to other residents of the euro area (denominated in euros and in other currencies) and claims in euros to EMU non-residents are not included in reserve holdings. From 2007 onwards, these transactions are shown in the appropriate categories of the capital and financial account sector of the Bank of Slovenia (investments in securities and other investments).

International monetary reserves item includes also financial derivatives (from 2009 onwards).

Table 3.1: Balance of Payments 1988–1993

The balance of payments is based on the methodology of the International Monetary Fund (Balance of Payments Manual, IMF, 1993). The balance of payments for the period 1998 - 1991 does not include transactions with republics of the former Yugoslavia. The import and export of goods is shown without processing transactions, processing is included in services.

Note 1: For 1988 and 1989, official sector data is included in "Other sectors".

Note 2: For 1988 through 1990, "Statistical errors" include sales of claims from bilateral agreements to the former National Bank of Yugoslavia and its purchases of foreign currency through Slovenian foreign currency exchange offices.

Note 3: Reserve assets of the Bank of Slovenia.

Table 3.2: Balance of Payments

The data for the current year are revised monthly. Data become final according to the revision practice (see revision practice).

In June 2001, Slovenia acquired a 16.39% share in the holdings of the former Yugoslavia with the Bank for International Settlements (BIS), consisting of gold SIT 16.9 mio (EUR 77.8 million), foreign currencies SIT 1.1 mio SIT (EUR 5.3 million) and shares SIT 3.0 mio (EUR 13.8 million). This transaction is not considered to be a flow of the balance of payments, but rather a part of the "Other changes" category, which reconciles the international investment position in consecutive periods.

* Years 1994 in 1995: Data for balance of payments in ECU for years 1994 and 1995 are not obtained in the same manner as data for other years. The data for merchandise trade are converted from US dollar to ECU using average monthly exchange rates. The data for merchandise trade in Euros or ECU since 1996 are computed from values in original currencies using daily exchange rates for Euro or ECU.

Note 1: Exports and imports of goods - f.o.b. parity

Note 2: June 1996: Includes the issue of government bonds in exchange for a part of allocated foreign debt in the amount of SIT 63.7 mio (EUR 374.9 million). Banks' liabilities under foreign loans are decreased for the same amount and transferred to "Liabilities to government".

Note 3: Issues of eurobonds:

- August 1996 (EUR 253.7 million)
- June 1997 (EUR 205.1 million)
- May 1998 (EUR 500.0 million)
- March 1999 (EUR 400.0 million)
- March 2000 (EUR 400.0 million)
- February 2001 (EUR 100.0 million)
- April 2001 (EUR 450.0 million)

Issues of government bonds since 2007:

- March 2007, SLOVEN4 (EUR 1000.0 million)
- February 2008, RS63 (EUR 1000.0 million)
- February 2009, RS64 (EUR 1000.0 million)
- March 2009, RS65 (EUR 1500.0 million)
- September 2009, RS66 (EUR 1500.0 million)
- January 2010, RS67 (EUR 1500.0 million)
- March 2010, RS68 (EUR 1000.0 million)
- January 2011, RS69 (EUR 1000.0 million)
- March 2011, RS70 (EUR 1000.0 million)

Note 4: For 1993–2001, short-term claims include net changes in commercial credits (received and granted). From 2002 onwards, short-term commercial credits are included on the basis of SKV reports on the assets and liabilities side of the balance of payments. Short-term commercial credits between affiliated enterprises are included under the heading "Direct investments", while other commercial credits are included in "Other investments/trade credits".

Note 5: Includes mostly Bank of Slovenia fiduciary accounts. In June 1996 the amount of 21.2 mio SIT (EUR 124.9 million) was transferred to regular Bank of Slovenia reserve accounts.

Note 6: Use of IMF credit (assumed upon membership in January 1993).

Note 7: Reserve assets of the Bank of Slovenia. Following Slovenia's entry to the EMU in 2007, claims to other residents of the euro area (denominated in euros and other currencies) and claims in euros to EMU non-residents are not included in reserve holdings. From 2007 onwards, these transactions are shown in the appropriate categories of the capital and financial account sector of the Bank of Slovenia (investments in securities and other investments). More explanation is available in: "The statistical treatment of the international monetary reserves at the entry of Slovenia to the euro area" (slovenian), in the chapter Methodological information on the internet page: <http://www.bsi.si/en/financial-data.asp?Mapald=64>.

Note 8: The data on reinvested earnings for 2012 are not yet available. Therefore, the balance of payments includes an estimate (from the three year monthly average for the period 2009 to 2011 of actual data on total earnings less extraordinary incomes [the source being annual reports on investments], less dividends and other incomes paid in the current month). In 2013, the estimate will be replaced with actual data on reinvestment of earnings; the estimate for 2013 shall take into consideration the new three year average (2010 to 2012).

Note 9: From 2001 onwards, there is a time series break in the categories "Direct investment" and "Loans". From 2001, inter-company debt transactions between affiliated enterprises (10% or more capital share) are included in the "Direct investment" category; before that they were included under the heading "Loans". Since 2002, the category "Direct investments" also includes short-term trade credits between affiliated enterprises.

Note 10: Transfers from the EU budget since 2004 have been recorded as either current or capital transfers, according to the nature of their use. Data are provided by the Ministry of Finance.

Note 11: In the balance of payment of Slovenia to the EMU the presentation of the category net of errors and omissions does not make sense.

Tables 3.3 and 3.4: Current account and capital and financial account by countries

The tables show the main categories of current and capital and financial account of the balance of payments, by countries, for the last available year. The most important countries and/or groups of countries are shown.

Table 3.5.: Trade in goods by countries

The data source is the Statistical Office of the Republic of Slovenia (external trade statistics). Import is valued at FOB parity; export is valued at CIF parity.

International Investment Position of Slovenia

General notes

The international investment position is the balance sheet of the stock of external financial assets and liabilities. The financial items that constitute the position consist of claims on non-residents, liabilities to non-residents, monetary gold and SDRs.

The methodology of the international investment position (IIP) of Slovenia is based on the fifth edition of the Balance of Payments Manual, IMF, 1993. The manual distinguishes four sectors – monetary authorities, general government, banks and other sectors.

The structure of the statement is similar to the balance of payments (financial account): here as well are holdings and liabilities, first classified by instruments, followed by sectors and finally by maturity. The change to the balance of holdings and liabilities in a specific period is the result of transactions or flows shown in the balance of payments and also exchange rate changes, price changes and other changes.

Revision policy

See note "Revision policy" in the section "Balance of Payments".

Data sources

Data sources for the international investment position of Slovenia are mainly the same as those for the financial account of the balance of payments.

Direct investment

Data on direct investment are collected from:

- concessional surveys on equity investment (SN),
- reports on loans granted to or received from non-residents (KR) - until 2006,
- reports on accounts abroad (C) - until 2006,
- short-term commercial credits with non-residents (SKV), and
- assets and liabilities in loans and deposits to nonresidents (KRD) for non-bank sectors since 2007.

In accordance with the recommendations of the IMF, this item comprises investment where the direct investor owns 10% or

more of ordinary shares or voting power. Equity shares are until 2006 valued at book value according to accounting standards. From 2007 the equity of listed companies is recorded according to market value and equity of unlisted companies is recorded according to book value in line with accounting standards. Reinvested earnings are included. Data of Surveying and Mapping Authority of the Republic of Slovenia on nonresidents' investments in real-estate in Slovenia are included from 2008 onwards. From 2007 data on foreign direct investment of households in the form of real estate are included. Claims on and liabilities to affiliated enterprises are included in the category "Direct investment-other capital". Intercompany claims or liabilities between affiliated banks and affiliated financial intermediaries recorded under direct investment capital are limited to those associated with permanent debt (loan capital representing a permanent interest). Until 2000, all long-term intercompany claims were considered liabilities between affiliated banks, and affiliated financial intermediaries were included in this item as well as permanent debt. From 2005 onwards other capital item of direct investment does not include claims/liabilities of banking sector to affiliated enterprises (those data are included in item other investment/ loans).

Data on claims and liabilities of Slovene enterprises in indirectly-affiliated enterprises from 1996 onwards are included in the category "Direct investment abroad" (in cases where an enterprise abroad having Slovene direct investment holds 10% or more equity in another foreign enterprise). In the category "Direct investment in Slovenia", data on the investment of foreign enterprises in indirectly-affiliated enterprises in Slovenia are included (in the case that a Slovene enterprise with foreign direct investment holds 10% or more equity in another Slovene enterprise). From 2007 all claims and liabilities to foreign direct investors/ direct investment enterprise and fellow companies that belong to the same foreign direct investor / direct investment enterprise are included.

Portfolio investment

Until 2002, data on equity securities and other equity shares were available from enterprises' surveys (form SN), but only data from surveys where the direct investor owns less than 10% of ordinary shares or voting power are included. (In the balance of payments, transactions with equity securities and other shares are collected from the ITRS [see note to tables 3.1–3.4] /Capital and financial account/Portofolio investment.) From 2007 data on equity shares bellow 10% that are traded without involvement of domestic dealers are collected (report SN).

From 2003 onwards, data from the reports VRP (operations in securities reported by brokerage houses, banks and investment companies) and KDD (Central Securities Clearing Corporation) are included. Also data on investments in mutual funds and investments of households in other equity securities are available since 2003. From 2007 data on assets of foreign debt securities that are traded without involvement of domestic dealers are collected (report DVP).

Data on residents' holdings of debt securities are available from VRP direct reports.

Liabilities of debt securities of the government, banking and other sectors are available from credit registration and Central Securities Clearing Corporation data (KDD). For domestic securities issued abroad, the source is VRP reports.

Financial derivates

From 2004 until 2006 these data are included in VRP and KDD sources. Since 2007 quarterly data on financial account's statistics are source for financial derivatives for all sectors except the central bank. From 2009 onwards financial derivatives of Bank of Slovenia are included in other investment/financial derivatives item or international monetary reserves item (depending on the residency of the counterpart).

Trade credits and loans

The source for short-term trade credits is a report of enterprises on the stock of external assets and liabilities (form SKV).

Until 2006 sources for long-term trade credits and loans are credit registration forms (forms KR) and from 2007 onwards statistical reports on assets and liabilities in loans and deposits to nonresidents for non-bank sectors (forms KRD) and are the same for the international investment position and the balance of payments. Until 2000, the balance of payments did not distinguish loans between affiliated companies from loans between unaffiliated companies and included all loans in other investment items.

From 2005 onwards monetary statistics (PORFI) is the source for banking sector data (claims and liabilities are included regardless of direct investment affiliation).

Currency and deposits, other assets, other liabilities and reserve assets

For these categories, the sources largely coincide with the sources for the balance of payments:

- the accounting data of commercial banks (KNB) - until 2004,
- the account balances of banks in original currencies (PPV) - until 2004,
- the account balances abroad of companies (C) - until 2006,
- assets and liabilities in loans and deposits to nonresidents (KRD) for non-bank sectors since 2007
- the source for banking sector data (PORFI) - since 2005,
- the accounts of the Bank of Slovenia.

In the International Investment Position, mature, unpaid loans and long-term commercial credits are included in other holdings and liabilities as short-term items. These transactions are not included in the balance of payments.

Until 2002, there is a difference between the International Investment Position and the balance of payments for other liabilities and holdings of other sectors, where contractual joint ventures are shown in the investment position. The source for this item is a JV report.

The International Investment Position includes data of the Bank for International Settlements (BIS) on deposits of local residents at BIS Member State banks. Since 2001, an estimate of the balance of foreign currency held by households is also included. However, any further investments of foreign currencies (primarily investments in real estate abroad and foreign securities, without domestic brokers) are not excluded from this estimate, since data of this type are not available. From 2007 onwards, the level of foreign currency holdings of domestic household sector equals the level that was reached

at the end of the year 2006 (2.948,6 EUR million), when Slovenia joined the European Monetary Union. Net position of the Bank of Slovenia to the Eurosystem (net result of incoming and outgoing payments conducted in EUR currency through TARGET and STEP2 system) is also included in the item liabilities/currency and deposits.

Table 3.6: International Investment Position of Slovenia

IIP data do not include:

- data on direct investment of Slovenian households. From 2007 onwards only estimation of the value of real estate direct investment abroad by Slovenian household sector is included,
- claims on other countries in the territory of the former Socialist Federal Republic of Yugoslavia, subject to negotiations on succession (except the part reported by the Fund of the Republic of Slovenia for Succession from 2001 onwards), expropriated assets in these territories and other assets transferred to the Slovenian government during the process of privatization. In December 2006 claims subject to succession to former Yugoslavia were revalued and 'Sklad RS za sukcesijo' was transformed into 'Javna Agencija Republike Slovenije za nasledstvo'.

Additional data on direct investment are available in a special publication of the Bank of Slovenia: "Neposredne naložbe – Direct Investment", and on the Bank of Slovenia Web site: http://www.bsi.si/iskalniki/ecb_en.asp?Mapald=714.

Table 3.7: International Investment Position by countries

The table includes data for the last available year by countries in which Slovenes invest (in holdings) and includes data from which countries foreigners invest in Slovenia (in liabilities). The most important countries and/or groups of countries are shown.

Gross External Debt

General notes

The methodology is based on External Debt Statistics: Guide for Compilers and Users, IMF, 2003. The guide is available at the following Web address: <http://www.imf.org/external/pubs/ft/eds/Eng/Guide/index.htm>.

Revision policy

See note "Revision policy" in the section "Balance of Payments".

Data sources

In order to maintain consistency, the data sources are the same as those for the International Investment Position. The sources for equities, financial derivates and monetary gold are not used because these types of instruments are not included in the balance of external debt according to the IMF definition.

Tables 3.8 and 3.9: Net External Debt

The tables present gross external debt, gross external assets in debt instruments, and net debt position. The data are the same as presented in the international investment position (IIP). In the table "Net External Debt", data are sorted by sectors, maturities and instruments; in the table "International Investment Position", data are sorted by instrument, sectors and maturities.

Tables 3.10 and 3.11: Gross External Debt

Gross external debt, at any given date, is the outstanding amount of those current, and not contingent, liabilities that require payment(s) of principal and/or interest by the debtor at some point(s) in the future and are owed to non-residents by residents of an economy. The types of financial instruments included in the presentation of the gross external debt position are as follows: debt securities (money market instruments, bonds and notes), trade credits (short- and long-term), loans (short- and long-term), cash, deposits and other debt liabilities. Maturity of debt liabilities is based on the formal criterion of original maturity. Long-term debt is defined as debt with an original maturity of more than one year or with no maturity stated. Short-term debt, which includes cash, is debt repayable at notice or with an original maturity of one year or less.

International reserves

Table 3.12.: International reserves

Until December 2006, the Bank of Slovenia's foreign exchange reserves included convertible foreign currencies, deposits abroad and first-class securities of foreign issuers.

From 1 January 2007, the Bank of Slovenia's foreign exchange reserves include convertible foreign currencies, deposits in foreign currencies outside the euro area and first-class securities in foreign currencies of issuers outside the euro area. The decline of value presented in the data is due to Slovenia's inclusion in the EMU.

Since 2009 foreign exchange reserves of the Bank of Slovenia include also positions on financial derivatives based on daily pricing of these instruments. The value of financial derivatives may also be negative.

4. PUBLIC FINANCE

General

Data prior to 2007 are published in tolars; from 2007, data are published in euros.
Quarterly and yearly data on Gross domestic product are not yet reconciled.

General - methodology ESA 95

Non-financial and financial data are prepared in compliance with the European System of Accounts from the year 1995 (ESA 95). This methodology was adopted by Council Regulation (EC) No. 2223/96 of 25 June on the European System of Accounts in the Community.

ESA 95 methodology is the central economic methodology of each EU member state and therefore ensures comparability of data.

Data on non-financial accounts of general government are prepared by the Statistical Office of the Republic of Slovenia. In accordance with a memorandum of understanding between the Ministry of Finance, the Bank of Slovenia and the Statistical Office of the Republic of Slovenia, the data on financial accounts are compiled by the Bank of Slovenia.

The data on financial accounts are consolidated.

Table 4.1: Non-financial and Financial Accounts (ESA 95) of the General Government sector

EDP debt is gross debt as defined in the Maastricht treaty. It comprises general government liabilities in the form of currency (coins), deposits, debt securities (securities other than shares and other equity) and loans only.

Tables 4.2 and 4.3: Non-financial Account of the General Government sector

Fiscal burden is a sum of the direct taxes, indirect taxes, social contributions and capital taxes.

Intermediate consumption consists of the value of the goods and services consumed as inputs by a process of production. The goods and services may be either transformed or used up by the production process.

Tables 4.4 and 4.5: Financial Account of the General Government sector

Change in EDP debt is a difference between the current and preceding EDP debt figure.

Deficit-debt adjustment (DDA) is a sum of the deficit/surplus of non-financial account and change in EDP debt. DDA can be also calculated as a sum of the difference between financial assets and liabilities (which are not included in EDP debt) and other flows.

Other liabilities consist of data, which are not included in the EDP debt: financial derivatives, shares and other equity, insurance technical reserves and other liabilities.

Other flows are sum of the statistical discrepancy (difference between deficit/surplus of non-financial and financial account) and changes of the debt which are not transactions (foreign exchange holding gains and losses, other valuation effects, other changes in volume of debt).

Borrowing requirement consists of a negative deficit/surplus of financial account plus financial assets minus financial liabilities.

Table 4.6: Revenues and Expenditures of the General Government

Note 1: The data of the current and previous year are revised monthly until the data on the previous year become final.

Note 2: Total revenue excludes receipts from the EU, and likewise, total expenditure excludes payments to the EU budget.

Note 3: Current expenditure also includes social security contributions (besides of the expenditures on goods and services, interest payments, current reserves and current transfers).

Note 4: On 1 October 2011, the Tax Administration of the Republic of Slovenia (DURS) introduced new information system and due to that, large number of recorded data on the tax and social security contribution revenues remained on unallocated fund accounts, while totals for those two categories were unaffected. We are publishing the data where certain categories of taxes and social security contributions were estimated by the Ministry of finance. The funds are expected to be correctly allocated already next month. Source: <http://www.mf.gov.si>

Tables 4.7: Lending, Repayments and Financing of the General Government

General government operations (consolidated state budget, local governments, pension fund and health insurance fund).

Note 1: The data of the current and previous year are revised monthly until the data on the previous year become final.

Table 4.8: Central budget debt

The Republic of Slovenia is defined as a legal person. The data from tables 4.6., 4.7. and 4.8. originate in the Bulletin of Government Finance published by the Ministry of Finance.

The obligation of the Central budget of Republic of Slovenia to Bank of Slovenia is due to settlement of the Special drawing rights of the International monetary fund by Bank of Slovenia as a fiscal agent, in line with the agreement between the Ministry of finance of Republic of Slovenia and Bank of Slovenia.

5. FINANCIAL ACCOUNTS

Financial accounts (Tables 5.1 to 5.6)

Tables 5.1, 5.2, 5.4 and 5.5 show stocks and transactions in financial assets and liabilities held by individual institutional sectors, by individual financial instruments. The basis for the financial accounts methodology is ESA95.

Tables 5.3 and 5.6 present net items by individual sectors.

Net financial assets present difference between financial assets and liabilities (stocks).

Net financial transactions present difference between transactions in financial assets and transactions in liabilities.

The general principle for stocks and transactions is valuation at the current market price. As a rule accrued interest is included in the instrument to which it relates (deposits, loans, securities).

The transactions represent the difference between increases (acquisitions) and decreases (disposals) or the net turnover in an individual financial instrument. Changes in market prices and exchange rates, and other changes (reallocations of financial instruments/sectors, changes in methodology, write-downs of claims/debts, etc.) are excluded from the transactions.

Sectors, according to SKIS, are used.

Financial instruments in financial accounts

Individual financial instruments are the same among assets and liabilities, except Monetary gold and SDRs which only appear in financial asset tables.

Monetary gold and SDRs represent financial assets of the central bank. No other institutional unit or sector shall show a liability from the above mentioned instruments.

Currency and deposits consists of three sub-categories of financial instruments:

- currency represents bank notes and coins normally used for payments and includes bank notes and coins in circulation and represents the liability of the unit which issued them (as a rule, the central bank). The category "Household Currency and NIPSH (non-profit institutions serving households)" includes the foreign currency of residents which is estimated based on net purchases.
- transferable deposits consist of sight deposits in domestic or foreign currency. Transferable deposits can be converted into currency or transferred by cheque, payment order, debit entry or the like, without significant restrictions or additional costs.
- other deposits consist of deposits that cannot be used to make payments at any time and are not convertible into currency or transferable deposits without significant restrictions or additional costs.

Securities, excluding shares, are comprised of the following:

- short-term debt securities (with an original maturity of up to one year bills and other short-term debt securities);
- long-term debt securities (with an original maturity of more than one year: bonds);
- financial derivatives (options, swaps, standardised futures, interest rate futures and warrants).

Loans consist of all types of loans created when creditors lend funds to debtors, either directly or through brokers, that are either evidenced by non-negotiable documents or not evidenced by documents. The initiative concerning a loan normally lies with the borrower. Loans also include loans for financing trade credits, financial leasing, repurchase agreements, and repayable margin payments related to financial instruments when these agreements and payments are liabilities of corporations that are not monetary financial institutions. Loans do not include trade credits or advances.

Loans are broken down into short-term loans (with an original maturity of up to one year) and long-term loans (with an original maturity of more than one year).

Shares and other equities represent:

- Shares which are quoted (on a domestic or foreign market);
- Unquoted shares;
- Other equities;
- Shares/units of investment funds.

Shares/units of investment funds include shares of investment companies, investment coupons (referring to one or more units of mutual funds) and units of pension funds.

Insurance technical reserves comprise the insurance technical reserves of insurance corporations and pension funds against policyholders and beneficiaries, and are divided into three sub-categories of financial instruments.

Net equity of households in life insurance reserves including:

- net life insurance provisions;
- net provisions for life insurance policies where the investment risk is borne by the policyholders;
- net health insurance provisions.

Net equity of households in pension fund reserves consists of provisions deriving from pensions.

Prepayments of insurance premiums and reserves for outstanding claims represent net prepayments of insurance policies, net reserves for outstanding claims and other net insurance technical reserves.

Other assets and liabilities are broken down as follows:

- Commercial credits and advances;
- Other (other assets and liabilities, excluding commercial credits and advances).

Commercial credits and advances consist of financial claims or liabilities arising from the direct extension of credit by suppliers or buyers for goods and services transactions, and advance payments for work that is in progress or to be undertaken and associated with such transactions.

Other (other assets and liabilities excluding commercial credits and advances) consists of all other claims and liabilities arising from timing differences between transactions and payments made in respect of taxes, social contributions, wages, rents, dividends, interest and transactions in financial assets on the secondary market. As a rule, accrued interest is included in the instrument to which it relates. However, should it be impossible to include the interest in the relevant instrument, it is disclosed in the category "Other".

Financial accounts data may differ from other statistical data because of:

- valuation method (current market value),
- data sources,
- time of data recording,
- time of data revision,
- methodological differences in financial instrument classification and
- other methodological differences.

Data for the period before the 1st of January 2007 are converted into EUR based on exchange rate 1 EUR = 239,64 SIT.

6. NON-FINANCIAL ACCOUNTS AND GENERAL ECONOMIC STATISTICS

General notes

The Standard Classification of Activities is defined by the Decree on the Introduction and Use of the Standard Classification of Activities (Official Gazette of the Republic of Slovenia, No. 69/2007, 17/2008) and is in line with the classification of activities NACE Rev.2(Nomenclature statistique des activités économiques dans la Communauté européenne) as a compulsory statistical standard of the European Union, which is directly connected to the international classification of the activities of United Nations ISIC Rev. 4(International Standard Industrial Classification).

The basic activities of an economy are:

- A Agriculture, forestry and fishing
- B Mining and quarrying
- C Manufacturing
- D Electricity, gas steam and air conditioning supply
- E Water supply, sewerage, waste management and remediation activities
- F Construction
- G Wholesale and retail trade; repair of motor vehicles and motorcycles
- H Transportation and storage
- I Accommodation and food service
- J Information and communication
- K Financial and insurance activities
- L Real estate activities
- M Professional, scientific and technical activities
- N Administrative and support service activities
- O Public administration and defence, compulsory social security
- P Education
- Q Human health and social work activities
- R Arts, entertainment and recreation
- S Other service activities
- T Activities of private households as employers, undifferentiated goods- and services- production activities of households for own use
- U Activities of extraterritorial organizations and bodies

Methodological notes and a detailed classification for the real sector are published on the Statistical Office's Web site:
http://www.stat.si/skd_nace_2008.asp (in Slovene).

General

Data prior to 2007 are published in tolars; from 2007, data are published in euros.

Non-financial accounts and general economic statistics

Tables 6.1 and 6.2: Expenditure of Gross Domestic Product

Real yearly growth rates are calculated from the GDP data in constant prices, reference year 2005.

Tables 6.3 and 6.4: Gross Domestic Product by Activity

Real yearly growth rates are calculated from the GDP data in constant prices, reference year 2005.

Tables 6.5 and 6.6: Industrial Production Index

For the period from January 1992 to January 2004, industrial production indices are calculated from quantitative data on the production of industrial products.

From February 2004 onwards, the basis for calculating the production indices are data on the value of production.

Tables 6.7 and 6.8: Turnover and New Orders in Industry

Data for the year 2010 are provisional.

For the period from January 1998 to January 2003, indices on turnover are estimated on the basis of the monthly data on the quantity of sold industrial products and the average annual prices of industrial products. Data from February 2003 onwards are gathered with the regular monthly survey on turnover, new orders and value of stocks in industry.

Real yearly growth rates are calculated from the real index on turnover and new orders in industry. The deflator is the industrial producer prices index.

Tables 6.9 and 6.10: Business Tendency and Consumer Surveys

The sentiment indicator is the weighted average of the confidence indicator in manufacturing and retail trade, plus the consumer confidence indicator. Sentiment indicators of certain activities or consumers are calculated from answers shown in the table.

The results are shown as a balance by individual questions. The balance is the difference between positive and negative answers, expressed as percentages. The balance shows the movement of the observed economic indicator (present situation or future expectations), and not the real size of economic indicators.

Table 6.11: Employment by Labour Force Survey (ILO)

The Slovene Labour Force Survey was carried out in compliance with International Labour Organisation (ILO) guidelines for labour force statistics and with Eurostat requirements. This enables the comparability of our data to the data of other countries.

Data in column 5 – self-employed persons include family-member assistants as well.

Note 1: From 2008 onwards the revised classification of activities SKD 2008 is used, which is internationally comparable with the NACE Rev. 2 classification of activities.

Table 6.12: Unemployment by Labour Force Survey (ILO)

The Slovene Labour Force Survey was carried out in compliance with International Labour Organisation (ILO) guidelines for labour force statistics and with Eurostat requirements. This enables the comparability of our data to the data of other countries.

Table 6.13: Average Wages and Salaries

Real wages and salaries are deflated by the consumer price index (CPI).

From January 2005 onwards a new methodology for the calculations of average monthly wages and salaries has been used. The statistical survey also includes legal entities with one or two persons in paid employment in the private sector. Individual private entrepreneurs and persons employed by them, own account workers and farmers are not covered.

Published data are the results of new research: the Monthly Report on Earnings at Legal Entities. Data are collected by the Agency of the Republic of Slovenia for Public Legal Records and Related Services (with the common questionnaire (Form 1-ZAP/M). Statistical work was done by SORS. SORS also calculated the average monthly wages and salaries data for 2004 according to the new methodology.

Table 6.14 Nominal effective exchange rate and Real harmonised competitiveness indicators

Nominal effective exchange rate, Euro area-17 countries vis-a-vis the EER-40 group of trading partners (AU, CA, DK, HK, JP, NO, SG, KR, SE, CH, GB, US, BG, CZ, LV, LT, HU, PL, RO, CN, DZ, AR, BR, CL, HR, IS, IN, ID, IL, MY, MX, MA, NZ, PH, RU, ZA, TW, TH, TR, VE); Currency denominator: Euro.

Real harmonised competitiveness indicators consumer prices, industrial producer prices and unit labour costs in total economy deflated; ECB EER-20 group of currencies and Euro area 17 country currencies (FR, BE, LU, NL, DE, IT, IE, PT, ES, FI, AT, GR, SI, AU, CA, CN, DK, HK, JP, NO, SG, KR, SE, CH, GB, US, CY, CZ, EE, HU, LV, LT, MT, PL, SK, BG, RO); Currency denominator: Euro.

Real harmonised competitiveness indicators consumer prices and unit labour costs in total economy deflated; ECB EER-20 group of currencies and Euro area 17 country currencies (FR, BE, LU, NL, DE, IT, IE, PT, ES, FI, AT, GR, SI, AU, CA, CN, DK, HK, JP, NO, SG, KR, SE, CH, GB, US, CY, CZ, EE, HU, LV, LT, MT, PL, SK, BG, RO); Currency denominator: until 31.12.2006 Slovenian tolar, from 01.01.2007 Euro.

The growth of the index value represents decrease of competitiveness.

Note 1: Data for harmonised competitiveness indicators unit labour costs in total economy deflated are quarterly.

Explanations to harmonised competitiveness indicators calculations are available in special methodological paper "Calculations of harmonised competitiveness indicators", on the Web site of Bank of Slovenia:
<http://www.bsi.si/publikacije-in-raziskave.asp?Mapald=1039>.

Tables 6.15 and 6.16: Consumer Price Index

The Harmonized Index of Consumer Prices (HICP) is a comparable index of consumer prices produced by each Member State and used for international comparison of consumer price inflation. In Slovenia it is available from the year 2001 onwards.

Tables 6.17 and 6.18: Industrial Producer Price Index

The index of industrial producer prices measures changes in the level of producer prices of industrial products that are sold by producers on the Slovenian market. The tables show the price indices and growth rates by end-use of products , as well as by main divisions of activities, v2 (2008).

Review of the links between the data on Slovenia in the Bulletin of the Bank of Slovenia and the Euro area data in the ECB's Bulletin

The table below shows the correspondence between the statistical tables on Slovenia in the Bulletin of the Bank of Slovenia and on the Euro area in the ECB's Bulletin, i.e. where are the data on Slovenia included into the Euro area aggregates. The ECB's Bulletin is available on the internet address: <http://www.ecb.int/pub/mb/html/index.en.html>.

Tables in Monthly Bulletin of the Bank of Slovenia	Tables in Monthly Bulletin of the ECB
1.1. Monetary aggregates	2.3 Monetary statistics (Monetary aggregates and counterparts)
1.2. Consolidated Balance Sheet of Monetary Financial Institutions	2.2 Consolidated balance sheet of euro area MFI s
1.4. Balance Sheet of Other Monetary Financial Institutions or	2.4 MFI loans, breakdown
1.5. Selected Assets of Other Monetary Financial Institutions by Sector	2.6 MFI holdings of securities, breakdown
