Important information

Monthly Bulletin of Bank of Slovenia has been, from the number 2-3 for February-March 2007, volume 16, partly changed in its content and form.

The preannouncement of the change has been published on the web page of the Bank of Slovenia in January 2007.

The main changes are as follows:

- The beginning of publishing the statistical data of value, which refer to the period after the entry to the euro area, in the official domestic currency - euro. The data of value for the previous period will continue to be published in tolar, as the official Slovenian currency in that period. The data in euros are in the tables separated from the data in tolar by line.
- The change in the concept of the international monetary reserves because of the entry to the Economic and monetary union. Among the Slovenian international monetary reserves after the entry to the euro area, compared to the period before, there are no longer assets in euro as well as the claims on the euro area residents. More explanation is available in: "The statistical treatment of the international monetary reserves at the entry of Slovenia to the euro area" (slovenian), in the chapter Methodological information on the internet page: <http://www.bsi.si/en/financial-data.asp?Mapald=64>.
- The change in the presentation of the currency in the circulation to the standards of the euro area.
- The accommodation of the balance sheet of Bank of Slovenia to its activities in the framework of the Eurosystem.
- The beginning of the publishing of the interest rates of the euro area money market as well as the publishing of the whole set of the interest rates of the Monetary financial institutions according to the ECB's methodology.
- The beginning of the publishing of the financial accounts statistics in the new chapter.
- Colour separation of the individual statistical chapters, to alleviate search and because of the link of the chapters to the specialised publications.

More information can be found in Methodological Notes in the Bank of Slovenia monthly Bulletin.

The entry to the euro area (on 1.1.2007) caused a break in the time series of the statistical tables in the Monthly bulletin in cases where the "currency" is an attribute. An expected reclassification takes place, for example of the stock of outstanding loans in euros from the time series of "foreign currency" before the introduction to the time series of "domestic currency" after the introduction of euro. To enable easier reconstruction of this change, the shares of the Euro amounts in stocks of the foreign currency in the tables 1.3, 1.4, 1.5 and 1.6 on 31.12.2004, 31.12.2005 and 31.12.2006 are published in the chapter Methodological notes.

In the third quarter, economic activity in the euro area declined again. The slide into technical recession was driven by further contractions in activity in the periphery countries and a decline in GDP in the Netherlands, while Germany and France recorded low growth. Confidence in the euro area economy is low, and projections suggest a continuation of the recession in early 2013. In the US the indicators of economic activity and confidence remain encouraging; the projections for 2013 are more favourable, although the fiscal deficit is larger and growth in debt is faster than in the euro area. Commodity prices fell in November, and the euro also fell against the dollar.

In the third quarter, economic activity also declined in Slovenia. GDP was down 0.6% in quarterly terms, as domestic consumption declined and demand in the EU remained weak. The introduction of deeper-rooted measures to stabilise the public finances and the adverse situation on the labour market are raising pessimism among consumers, while the temporary rise in inflation is reducing consumer purchasing power. These developments have accelerated the decline in activity in the segments of the service sector primarily focused on the domestic market. The year-on-year contraction in construction activity remained in excess of 10%, and demand indicators mostly suggest a continuation of the crisis in the sector. Value-added in manufacturing declined again, as exports to markets outside the EU have not sufficed to compensate for weak demand in Member States. As a result, turnover in the transportation and storage sector declined as well. As the situation has become even more uncertain, investments by the export sector have also declined rapidly. The contribution made to GDP growth by net trade is still increasing, but primarily as a result of the ongoing decline in domestic consumption. The outlook for the final quarter is poor, since economic activity in the EU remains weak, confidence in the Slovenian economy is low, and the situation on the labour market is deteriorating.

In September and October, the situation on the labour market deteriorated further. The year-on-year fall in the workforce in employment deepened to 2% in September, as there was no sign of the usual seasonal increase in employment. The year-on-year increase in the workforce in employment in the public sector is slowing sharply, while the year-on-year decline in the private sector deepened to 2.7% in September. A growing factor in the latter is the larger fall in the workforce in employment in the manufacturing sector. In the third quarter the surveyed unemployment rate rose to more than 9%. In October, the year-on-year fall in the number of registered unemployed came to a halt as a result of the high monthly inflow of first-time job-seekers, while the decline in the number of new hires also accelerated. The average nominal wage has declined in recent months, while the average real gross wage in September was down just under 5% in year-on-year terms as inflation rose temporarily.

As measured by the HICP, year-on-year inflation stood at 2.8% in November, down 0.4 percentage points on the previous month, primarily as a result of a fall in energy prices. Given the need to raise general government revenues, the annual road vehicle duty was raised in November, which increased year-on-year growth in services prices. Consequently there was a slight rise in core inflation, which in the context of contracting domestic consumption remains relatively low and well below the euro area average.

The current account surplus has gradually increased this year. The largest factors in September's current account surplus of EUR 170 million were an increase in the surplus of trade in services and the second relatively high surplus in merchandise trade this year. In September, the current account surplus over the preceding 12 months increased to EUR 374 million or 1.0% of GDP, compared with a deficit of 0.1% of GDP a year earlier. The improvement in the current account was to a great extent related to the decline in imports caused by the contraction in domestic consumption.

The general government deficit is gradually falling as a result of the reduction in expenditure, since June also due to measures taken under the Fiscal Balance Act (ZUJF). Almost all items of expenditure are falling, with the exception of interest and payments into the EU budget. Given the low economic growth and the adverse situation on the labour market, revenues during the first nine months of the year were down slightly in year-on-year terms, which is making fiscal consolidation harder.

The Slovenian banking system's total assets are continuing to decline. They declined by EUR 1.9 billion during the first nine months of the year to EUR 46.9 billion. The largest factor on the funding side was the banks' net repayments on the wholesale markets. Despite the interruption in net debt repayments at banks in the rest of the world in September and the relatively small net repayments via issued debt securities, the banks have reduced their funding via these two forms by EUR 2.9 billion this year. Loans to the non-banking sector have continued to decline at the same time, primarily as a result of a decline in loans to non-financial corporations, driven mainly by the large domestic banks. Year-on-year growth in lending to households has been negative for five consecutive months. The banks recorded a pre-tax loss of EUR 76 million in the first nine months of the year. The main factor in the loss was high impairment and provisioning costs. They were up a fifth on the same period last year, and accounted for 61% of the disposal of the banks' gross income.

The market capitalisation of shares on the Ljubljana Stock Exchange rose by 0.4% in October, while the market capitalisation of bonds rose by 0.6%. The SBI TOP rose by 0.3% in October to end the month at 593 points, taking the year-on-year change to -7.7%. The proportion of the market capitalisation of shares on the Ljubljana Stock Exchange accounted for by non-residents stood at 13.1%. Slovenian residents made net purchases of foreign equities in October, and net sales of foreign debt securities. The domestic mutual funds' assets under management declined to EUR 1,845 million in October, as a result of net withdrawals of EUR 2.7 million and a fall of 0.2% in the average unit price.

1 | International Environment

In the third quarter, the euro area slid into technical recession, as GDP declined for the second consecutive time. Projections for this year remained practically unchanged in November, but those for next year were revised downwards. In the third quarter, GDP in the euro area was down 0.1% in quarterly terms, and down 0.6% in year-on-year terms. The largest factor was again the contraction in the periphery countries (Spain, Portugal, Italy, Greece), which have been in recession for some time now, largely as a result of weak domestic demand in connection with fiscal consolidation and the situation on the labour market. There was also a sharp decline in GDP in the Netherlands. In the third quarter Germany and France recorded a quarterly rise in GDP of 0.2%. GDP in the UK also rose in the third quarter, by 1.0% in quarterly terms, largely as a result of the one-off effects of the Olympics. Consensus' November projection for economic growth in the euro area in 2012 was unchanged from October at -0.5%, but the forecast for 2013 was cut by 0.2 percentage points to zero. For the US, the projection for this year is 2.2%, while for 2013 it was cut by 0.1 percentage points to 1.9%. In its autumn projections for the euro area the OECD expects declines in

GDP of 0.4% in 2012 and 0.1% in 2013. The respective OECD figures for the US are 2.2% and 2.0%.

In September and October, activity in the manufacturing and construction sectors in the US remained relatively favourable, but declined sharply in the euro area in September. Developments in volume turnover in the retail sector remain more favourable in the US than in the euro area. In September, the amount of construction put in place in the euro area was down 1.4% on the previous month, taking the year-on-year decline to 4.4%. After strengthening slightly in July and August, industrial production fell significantly in September, by 2.5%

in monthly terms and by 2.9% in year-on-year terms. In the third quarter it was up 0.3% in quarterly terms, but was down more than 2.0% in year-on-year terms. Production of intermediate goods recorded the largest decline, partly as a result of the significant decline in sales of finished products in the EU, which was particularly pronounced in the automotive industry, where registrations of new cars in the third quarter were down 6.5% on the previous quarter. Volume turnover in the retail sector also declined in September, by 0.2% from August and by 1% in year-on-year terms. The economic situation in the US remains more favourable. The amount of construction put in place was up 0.6% in monthly terms and 7.8% in year-on-year terms, while the number of new building permits in October was up significantly in year-on-year terms. In September, industrial production was up in monthly terms, but fell by 0.4% in October. October's fall was partly the result of weather conditions across the east coast of the US. Year-on-year growth nevertheless remained positive in October at 1.7%. In October, volume turnover in the retail sector was up 1.6% in year-on-year terms, despite a decline of 0.5% compared with September.

As calculated by the European Commission, the economic sentiment indicator in the euro area increased in November, but all sub-categories remained below their long-term averages. Confidence improved in manufacturing, services and the retail sector, but declined again in the construction sector to reach its lowest level since 2009. Consumer confidence declined sharply, reaching its lowest level of the last three years. The deterioration in consumer confidence was largely the result of high unemployment, which stood at 11.7% in October. As measured by Markit, the aggregate PMI for the euro area was practically unchanged in November according to the preliminary figures, and is still reflecting a contraction in economic activity.

Consumer confidence in the US has risen sharply. The unemployment rate in the US rose slightly in October, to 7.9%. As measured by Thomson Reuters, consumer confidence nevertheless improved, despite the uncertainty of a fiscal agreement between the political parties. As measured by the Institute for Supply Manage-

ment, the PMI for manufacturing in the US rose in September and October.

In November, US dollar prices of Brent crude fell slightly, while prices of other commodities also fell.

The dollar price of Brent crude fell by 2% to average USD 109.70. The main factor in the fall was concerns over the global economic outlook due to the contraction of activity in the euro area, the uncertainty regarding a fiscal agreement in the US and geopolitical tensions in the Middle East. Other commodity prices also fell, most notably metals, which were down 3.1% on October. Year-on-year growth in food prices remained relatively high, reaching 6.2% in November.

In November, year-on-year inflation fell to 2.2% in the euro area, while in the US it rose to 2.2% in October.

As measured by the HICP, inflation in the euro area fell to 2.5% in October, down 0.1 percentage points on September. Year-on-year growth in energy prices slowed to 8.0% in October, down just over 1 percentage point on September. In October, growth in food prices was up 0.2 percentage points on September, while growth in prices of alcohol and tobacco remained unchanged. At the same time, prices of transport services fell significantly, while prices in education rose. Weak domestic demand continues to be reflected in the relatively low core inflation rate as measured by the HICP excluding energy and unprocessed food, which remained at 1.6% in October. As measured by the CPI, inflation in the US in October was up 0.2 percentage points on September at 2.2%. Year-on-

-year growth in energy prices was again lower than in the euro area at 4.0%, the euro's year-on-year depreciation against the dollar standing at 5.3%. As measured by the CPI excluding energy and food, core inflation remained unchanged in October at 2.0%.

In November, the major central banks in the developed economies left their monetary policies unchanged, and the euro fell against the US dollar.

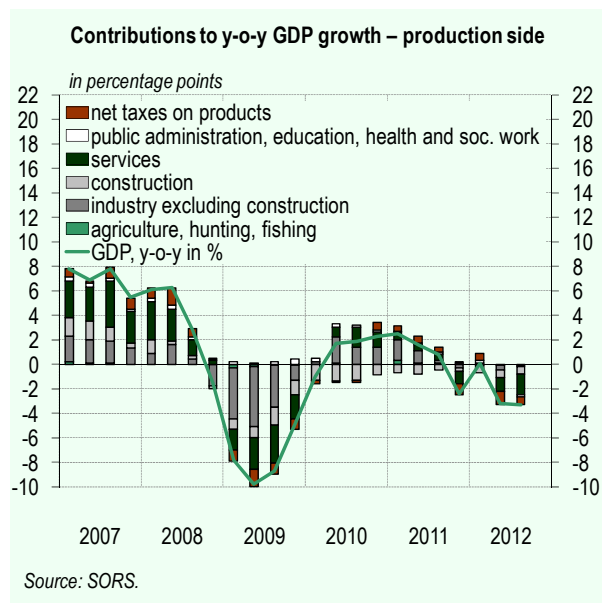

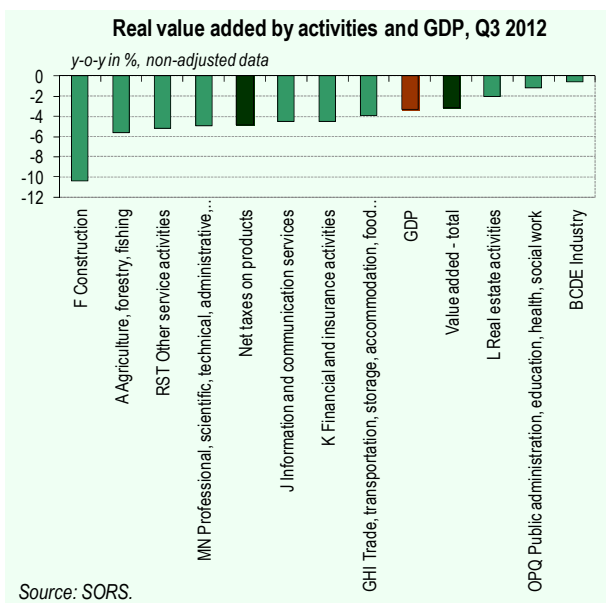

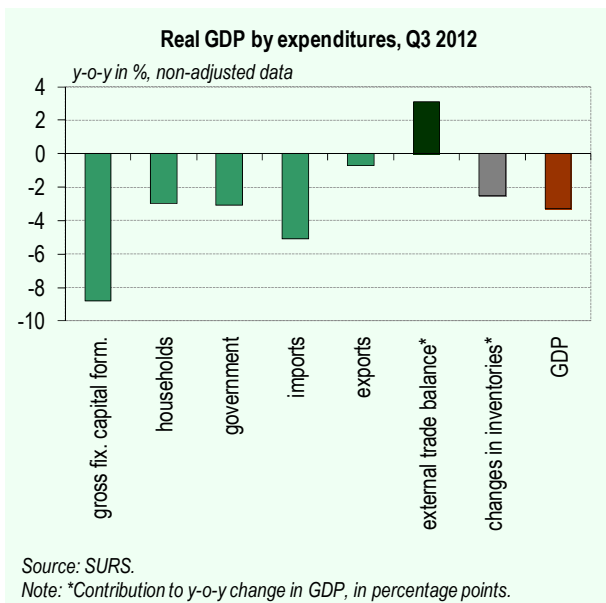

The ECB's key interest rate remained unchanged at 0.75%. Neither did the Fed make any change to its monetary policy, i.e. the size of its securities purchases and its key interest rate, which remains in the interval between zero and 0.25%. The euro fell by 1.1% against the US dollar overall, to average USD 1.28 over the month. In the first half of the month, the main factors in the euro's fall against the dollar were the poor macroeconomic figures for the euro area, the uncertainty surrounding Spain and Greece, and the slightly higher-than-expected economic growth in the US, while in the second half of the month the main factor in the euro's movement was the resolution of the issue of assistance for Greece.

2 Economic Activity, Labour Market and Competitiveness

Economic Activity – National Accounts

Alongside weak demand from the EU, the recession in Slovenia is increasingly being deepened by certain fiscal consolidation measures that are further reducing domestic consumption. GDP in the third quarter was down 0.6% on the previous quarter, and down 3.3% in year-on-year terms. In the third quarter, lack of consumer confidence, rise in surveyed unemployment and decline in purchasing power accelerated the decline in activity in the service sector, which is feeding back into lower employment. In contrast to previous years, a decline in value-added in public services is also a factor in the decline in GDP. The relatively favourable growth in exports to markets with other currencies could not prevent a renewed decline in value-added in the export sec-

tor. As a result of rising uncertainty in the economy, the relatively low capacity utilisation and the difficulties in accessing financing, the decline in investment in machinery and equipment is accelerating in the export sector. The high uncertainty surrounding demand is also being reflected in the ongoing decline in inventories, which made a contribution of -2.5 percentage points to GDP growth in the third quarter. The volume of foreign trade is also declining. The decline in imports was pronounced, while the decline in exports was small, which increased the contribution made to GDP growth by net trade to more than 3 percentage points.

In the third quarter, value-added fell in all sectors, including public services. The adverse effects of cer-

tain fiscal consolidation measures are also being evidenced on the output side of GDP. Having mitigated the decline in GDP since the outbreak of the crisis, public services made a visible contribution to the decline in GDP for the first time in the third quarter. Value-added in public services was down 1.2% in year-on-year terms. In light of consolidation measures to reduce wages and transfers and the deterioration in the situation on the labour market, value-added in all segments of private sector services recorded a year-on-year decline in the second quarter, and in the third quarter the decline deepened to around 4%. The situation in the construction sector remains dire, as the year-on-year fall in value-added continues to exceed 10%, despite a slowdown in the decline in

construction investment. The year-on-year decline in value-added in manufacturing was just 0.6%, which is considerably better than in Germany and France for example.

Economic Activity – Monthly Indicators

With September's monthly decline, quarterly growth in industrial production slowed further in the third quarter. In September, total industrial production was down more than 2% in monthly terms. Output in the energy sector declined slightly for the third consecutive month, while manufacturing output was down by just un-

der 1%. In addition to September, the third quarter also saw adverse developments in July, which slowed the quarterly rate of growth in industrial production to just 0.2%, 0.6 percentage points less than in the second quarter. Growth was only positive as a result of the pass-through of the high level of output in the energy sector from the preceding quarter, as manufacturing output declined by 1%.

In the third quarter, year-on-year growth in industrial production was relatively favourable despite the decline in September. In September, the year-on-year decline in total industrial production stood at almost 5%

Notes: Differences from official numbers are due to rounding. Data are unadjusted for seasonal and working days effects.

* Volume of industrial production. ** Real value of construction put in place. *** Old methodology.

according to original figures, while the decline in manufacturing stood at 6.6%, albeit largely as a result of the smaller number of working days. Adjusted for the number of working days, total industrial production was down just 0.2% in year-on-year terms, while the decline in manufacturing was less than 2%. According to figures adjusted for the number of working days, year-on-year growth in total industrial production increased to 1.8% in the third quarter. There was a weak year-on-year increase in manufacturing output for the first time since the third quarter of last year, but only as a result of a base effect.

Measured in terms of volume turnover and industrial new orders, total demand for Slovenian manufactured goods declined in the third quarter as a result of a sharp decline in September. According to original figures, industry's volume turnover in September was down almost 9% in year-on-year terms, while volume turnover during the third quarter was down just 1%. Volume turnover on the domestic market continued to record a rapid decline, while on the markets of the euro area it also declined sharply, having recorded relatively favourable growth between June and August. Volume turnover on markets outside the euro area declined slightly in September, probably as a result of the smaller number of working days, while in the third quarter it recorded the highest year-on-year growth since the second quarter of 2010. A similar trend was seen in the real value of industrial new orders, which according to original figures was down almost 8% in year-on-year terms. Orders on the domestic market and in the euro area continue to decline. In September, growth in orders on markets outside the euro area also slowed.

For the final quarter of this year, survey figures for factors limiting production suggest a further deterioration in the situation in the manufacturing sector. The largest increase was in the proportion of firms citing the uncertain economic situation as a limiting factor, which at 44% was the highest figure recorded since the second quarter of 2009, when the first low point of the crisis was reached. The percentage of firms facing insufficient domestic demand has been increasing for one year, reaching 52% in the final quarter of this year. Foreign demand has remained weak, with 40% of firms citing it

this year, 4 percentage points more than last year. The proportion of firms with financial problems is also gradually increasing.

After declining by a fifth in the second quarter, construction activity ceased declining in quarterly terms in the third quarter. This was the result of an increase of more than 23% in the amount of civil engineering work put in place in September, which raised quarterly growth in this segment to around 5%. Activity in the construction of residential and non-residential buildings continued to decline in quarter-to-quarter basis. The amount of residential construction put in place was down just under a third on the second quarter, while the decline for non-residential buildings was just under 7%.

Volume of construction put in place

Volume of construction put in place

The year-on-year contraction in the total amount of construction put in place is gradually slowing down.

According to non-adjusted figures, the decline amounted to 12.3% in the third quarter, the lowest figure since the outbreak of the crisis in construction. The largest factor in this slowdown was the year-on-year growth of more than 2% in civil engineering activity in September. With civil engineering work accounting for 65% of all construction put in place in September, the year-on-year decline in total construction activity in the month slowed to just 4%, the lowest figure since December 2008. Considering non-residential buildings, the year-on-year contraction in the amount of construction put in place has also slowed in recent months. The crisis in residential construction has continued: activity in the third quarter was down almost 50% in year-on-year terms, reflecting the slowdown in the market for new-build housing as a result of increased uncertainty on the labour market, the persistent relatively high prices and an excess supply of housing already built. Access to finance for new projects is also severely hampered.

The situation in the construction sector remains unfavourable, despite a slowdown in the negative growth in certain demand indicators. The year-on-year decline in the total real value of new contracts is slowing as a result of an increase in the value of contracts for civil engineering work. In the third quarter, the decline in the

Real value of new contracts in construction

number of building permits slowed to just 2.4%, although the decline in the corresponding floor area of buildings remained rapid. Survey indicators of total and expected orders remain low. Insufficient demand remains the main limiting factor, cited by 52% of firms in November. In the third quarter, prices and the number of transactions in new-build housing continued to fall in year-on-year terms.

The liquidity of construction firms remains poor. After falling for one year, the number of construction firms with unsettled past-due liabilities¹ rose again in October. Construction firms continued to account for the largest proportion of all firms with unsettled liabilities, at more than

¹ Legal entities and sole traders with unsettled past-due liabilities from court enforcement orders and from tax debts of more than five days uninterrupted excluding other unsettled past-due liabilities from unpaid invoices between creditors and debtors. Source: AJPES.

22% in October. The total amount of unsettled liabilities also remained highest in the construction sector, which accounted for 27% of firms' total unsettled liabilities in October.

In the third quarter, nominal turnover fell in all segments of private sector services. Total turnover in private sector services (excluding wholesale and retail trade, insurance and banking services) was down 1% on the second quarter, and down 3.2% in year-on-year terms. The decline in turnover was sharpest in professional, scientific and technical activities, at just under 3% in quarterly terms. In line with the crisis in the construction sector and the standstill on the real estate market, turnover in architectural activities and related services is continuing to decline sharply. As merchandise trade declined, turnover in the transportation and storage sector recorded its second consecutive quarterly decline. The situation in the information and communication sector is also deteriorating, turnover in computer services recording a sharp decline in the third quarter. Within administrative and support service activities, turnover in employment activities is declining rapidly, in line with the decline in the number of vacancies.

In October, the situation in retail trade deteriorated further, with the vast majority of its segments recording a decline in volume turnover. Having declined in monthly terms, the year-on-year decline in volume turnover in the retail trade deepened to just under 7%. In addition to a further decline in the consumption of foodstuffs and durables this also indicates a year-on-year stagnation in volume turnover in trade in motor fuels. In the trade and repair of motor vehicles, the year-on-year decline in volume turnover has stood at around 10% in recent months, in line with the pronounced fall in the number of new car registrations.

In November, economic sentiment remained at a very low level. In recent months there has been a particular deterioration in confidence in sectors primarily dependent on domestic demand. In November, the retail confidence indicator was negative for the second consecutive month as a result of the low sales indicator, although this usually fluctuates sharply. The service confidence indicator for private sector services other than trade has remained at

Nominal turnover in private sector services excluding trade

Volume turnover in trade

Volume turnover in trade

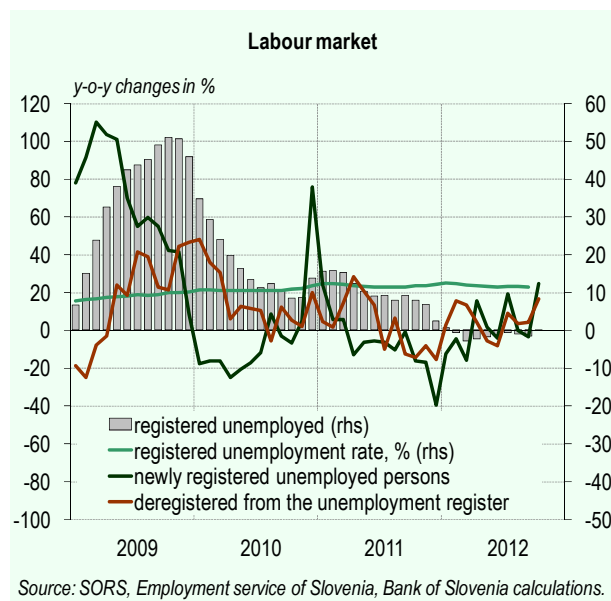

its lowest level since June 2009 as indicators of current demand and demand expectations are low. Consumer confidence and construction confidence remain very low. The manufacturing confidence indicator improved slightly in monthly terms, primarily as a result of less pessimistic assessments of total orders and expected output, but remains significantly lower than at the beginning of the year.

Labour Market

From September to October, the increase in the number of registered unemployed was stronger than in 2011, which ended the year-on-year fall in the number of unemployed typical of the preceding months. In October, the number of registered unemployed was up more than 5,400 on the previous month, compared with a rise of less than 3,900 last year. Unemployment stood at just under 111,000 as the period of year-on-year falls in the number of registered unemployed seen since February came to an end. The large increase in the number of unemployed was primarily the result of a strong inflow of first-time job-seekers, largely as a result of the termination of student status. This inflow stood at almost 5,000 this year, compared with 3,000 last year. It should be noted that last year's inflow was very low, and the pronounced fluctuations in the figure could be the result of the introduction of the Bologna Process. The number of people registering as unemployed as a result of the expiry of temporary employment contracts remains high: it

Y-o-y change in the number of first-time job seekers among the registered unemployed in October

was up almost 1,000 in year-on-year terms in October. The number of people deregistering as unemployed in October was 1,300 higher than in the same month last year. Outflows into inactivity remain high, while outflows into employment were also slightly stronger in October.

In October, the fall in the number of notified vacancies ended, but the number of new hires fell significantly for the second consecutive month. After falling for six months, the number of notified vacancies recorded a year-on-year increase of just under 1% in October. The number of notified vacancies during the first ten months of the year was down just over a tenth in year-on-year terms, primarily as a result of a sharp fall in the second quarter of this year. The rapid fall in the number of new

hires suggests a further deterioration in the situation on the labour market during the final quarter. After falling by 5% in September, the number of new hires was down almost 12% in year-on-year terms in October, the largest fall since May 2010. The number of new hires for temporary employment was down just over a tenth, while the number for permanent employment was down just under a fifth. As a result of the rise in employment in the early

part of the year, the number of new hires in the first ten months of the year was nevertheless up around 3% in year-on-year terms. Temporary employment accounted for 84% of all new hires, 3 percentage points more than in the same period last year. This indicates increased flexibility in the labour market, but is also reducing the income security of employees.

Source: SORS, Bank of Slovenia calculations.

Given the lack of a seasonal rise in employment, the year-on-year fall in the workforce in employment deepened in September. In the last three years of the crisis, September brought an average increase of around 1,000 in the workforce in employment compared with August, but this year the workforce in employment fell by 100 in September. As a result, the year-on-year fall in the workforce in employment deepened to 2%, having been gradually increasing since April. In contrast to last year, all categories of the workforce in employment have been declining, including the number of self-employed. In contrast to previous years, increased retirement means that the workforce has been declining at the same pace as the workforce in employment. As a result of high outflows into inactivity, the registered unemployment rate has continued to fluctuate around 11.5% despite the deterioration on the labour market.

In September, the workforce in employment in the private sector was down in monthly terms for the first time since 2009. It fell by 1,000, compared with a rise of 400 last year. The largest factors in the fall were con-

struction, financial and insurance activities and manufacturing. In September, the workforce in employment in the private sector was down 2.7% in year-on-year terms, 1 percentage point more than at the beginning of the year. The last few months have seen a particularly sharp deterioration in the manufacturing sector, where the work-

force in employment was unchanged in year-on-year terms in April, yet was down 1.7% in September.

In the summer, the seasonal fall in employment in the public sector was larger than last year, while the seasonal rise in September was weaker. The workforce in employment fell by 2,400 between June and August, 1,300 more than in the same period last year, and rose by 900 in September, 100 less than last year. The workforce in employment in the education sector fell by 1,800 between June and August, 700 more than in the same period last year, and rose by 1,000 in September, 150 less than last year. The workforce in employment in public administration fell by 500 between June and August, 170 more than in the same period last year. Monthly growth in employment in the human health and social work activities sector also came to an end. These developments in employment are in line with the measures to balance the public finances. In September, year-on-year growth in the workforce in employment in the public sector slowed to 0.5%. The workforce in employment in public administration was down 1%, while growth slowed to 0.6% in the education sector and to 2% in the health sector.

In September, the average nominal gross wage continued to record negative year-on-year growth. The average nominal wage was down 1.2% on last September. Nominal wages in the public sector have fallen by approximately 3.5% since June in year-on-year terms. In September, the average wage in the private sector also fell in year-on-year terms, primarily as a result of a lower number of working days. Wages fell in year-on-year terms in the vast majority of the private sector, most notably in construction, where the fall was around 5%. Manufacturing saw negligible growth in nominal wages, while the energy sector remained an outlier as wages were up 8% in year-on-year terms in September.

Given the temporary rise in inflation in the last few months, the fall in real wages has also accelerated. In September, the average real gross wage was down just under 5% in year-on-year terms, and has been falling continuously for one year. The fall in the real wage bill is also accelerating. It has been mostly falling since August 2009. In September, the real wage bill was down 6.4% in

Total wage bill and average gross wage per employee

Wage bill is calculated as the product of average gross monthly wages for employees of legal persons who received pay and the total number of employees of legal persons.

Source: SORS, Bank of Slovenia calculations.

year-on-year terms, and was down around 9% on September 2009. In addition to higher inflation and falling wages in the public sector, a growing factor in the accelerating fall is the renewed pace in the fall in the workforce in employment in the private sector.

Selected Competitiveness Indicators

Despite a current appreciation in September and October, the year-on-year decline in the nominal competitiveness indicator is an indication that exchange rates remain more favourable for Slovenian exporters than a year ago. Slovenia's nominal harmonised competitiveness indicator, which measures the euro exchange rate against 40 countries outside the euro area, was down in year-on-year terms for the ninth consecutive

Nominal harmonised competitiveness indicator

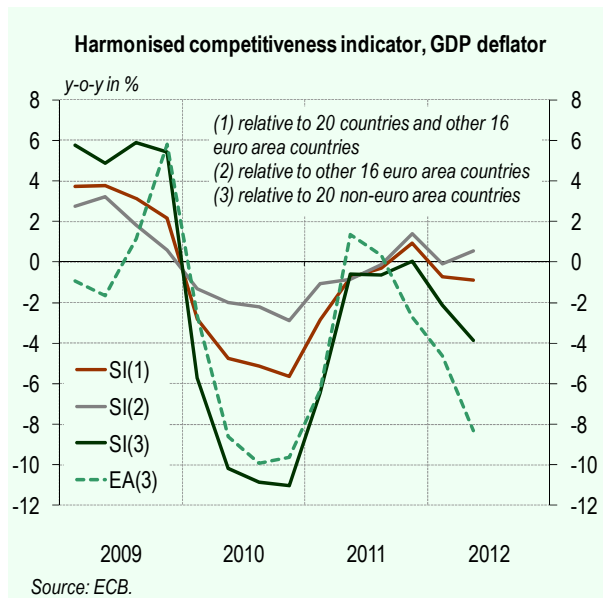

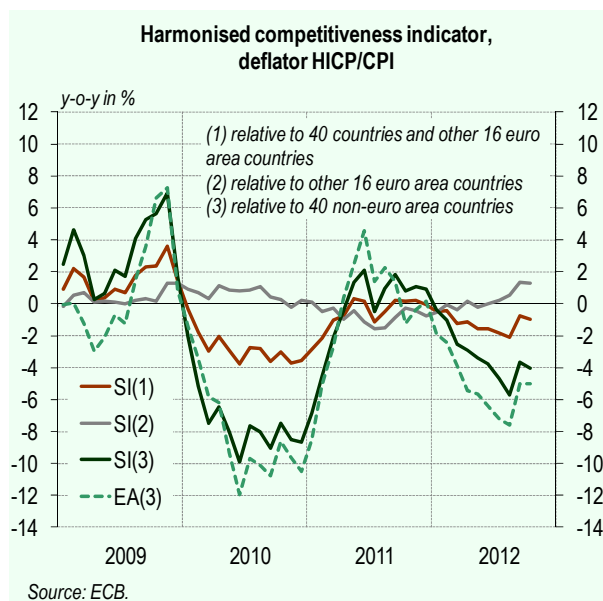

Source: ECB.

month in October, when the depreciation stood at 4.2%. The main factor in the sharp decline in the indicator in the last four months has been the euro's year-on-year depreciation against the Chinese yuan, the US dollar and the pound sterling. The euro's movement against these currencies has also brought a year-on-year decline in the comparable competitiveness indicator for the euro area as a whole, which stood at 4.8% in October. The gap in year-on-year depreciation between the indicators for Slovenia and the euro area has narrowed over the last three months. The reason lies in the euro's faster depreciation against the Hungarian forint and the South Korean won, which have a higher weighting in the Slovenian indicator, and in the euro's smaller fall against the US dollar and the pound sterling, which are weighted more heavily in the indicator for the euro area.

As differences in exchange rate movements have narrowed, the improvement in Slovenia's price competitiveness has increasingly been curbed by higher inflation. Slovenia's price competitiveness indicator measured against 40 countries outside the euro area was down 4.1% in year-on-year terms in October, slightly more than in September. The year-on-year decline in the comparable indicator for the euro area remained at 5%. The main factor in the narrowing differences in the movements of the indicators during the last two months has been the lower volatility in exchange rate movements, while differences in year-on-year price movements have increased again. Year-on-year inflation in Slovenia has been higher than the euro area average since June, which is causing a deterioration in Slovenia's price competitiveness relative to the other 16 euro area countries. In the second quarter, Slovenia's harmonised competitiveness indicator as measured by the GDP deflator against 20 countries outside the euro area was down 3.9% in year-on-year terms. At the same time, the comparable indicator for the euro area declined by 8.3%. The smaller year-on-year decline in the Slovenian indicator was largely the result of higher year-on-year growth in the GDP deflator.

As measured by unit labour costs in the total economy, Slovenia's cost competitiveness improved again in the second quarter of this year, primarily

driven by labour costs. They fell by 0.3% in the second quarter, compared with an average rise of 0.5% across the euro area. As a result of past developments, labour costs in Slovenia in the second quarter of this year remained unchanged in year-on-year terms, while labour costs in the euro area were up 1.5%, which brought renewed improvement in Slovenia's cost competitiveness relative to other euro area countries. Slovenia's cost competitiveness relative to 20 countries outside the euro area also improved. The harmonised cost competitiveness indicator measured against 20 countries outside the euro area fell by 6.4% in year-on-year terms, compared with 7.5% for the euro area overall. The faster improvement in the euro area's cost competitiveness relative to 20 major trading partners is solely a reflection of differences in the currency structure of foreign trade.

3 | Price Developments

As measured by the HICP, year-on-year inflation stood at 2.8% in November, down 0.4 percentage points on the previous month, primarily as a result of a fall in energy prices. As excise duties remained unchanged, oil price developments on global markets resulted in a fall in prices of motor fuels and fuel oil. Prices of district heating and gas fell for the second consecutive

month as a result of price adjustments after the arrival on the market of a new natural gas supplier in October. The contribution made to year-on-year headline inflation by energy prices thereby declined sharply, by 0.5 percentage points to 1.0 percentage points. The contribution made by non-energy industrial goods remained unchanged at -0.2 percentage points. Prices of clothing and footwear rose less than in November of last year, while prices of cars continued to fall in year-on-year terms. Year-on-year growth in prices of unprocessed food has been gradually increasing since July. The November increase was primarily driven by prices of fruit, while year-on-year growth in prices of meat declined slightly. As year-on-year growth in prices of processed food declined, the overall contribution to year-on-year inflation made by food prices remained unchanged. Year-on-year growth in services prices increased, primarily as a result of a rise in the annual road vehicle duty. Inflation in the euro area overall remains lower than in Slovenia. According to initial estimates, it fell to 2.2% in November. As in Slovenia, the fall was driven primarily by a decline in year-on-year growth in energy prices.

In November, year-on-year core inflation was up slightly on October, but remains well below the euro area average. Year-on-year growth in the HICP excluding energy, food, alcohol and tobacco was up 0.2 percentage points at 0.7%. This was primarily the result of the rise in services prices caused by measures to generate higher general government revenues. By contrast, the

year-on-year fall in prices of non-energy industrial goods deepened. The inflation indicators thus continue to reflect the absence of inflationary pressures on the demand side. The narrowest core inflation indicator remained well below the October's euro area average, by 1.0 percentage points.

According to the latest detailed figures available, the largest contributions to the fall in year-on-year inflation in October came from falls in energy prices and prices of footwear. Excise duties on tobacco were raised again. In October, all types of energy prices fell, with exception of electricity prices, which remained unchanged. Despite a rise in excise duties, year-on-year

growth in prices of motor fuels and liquid fuels declined as a result of a fall in oil prices on global markets. This reduced their contribution to year-on-year inflation by 0.3 percentage points to 1.4 percentage points, which nevertheless accounts for almost half of the inflation rate. As a result of the entry of a new competitor into the natural gas market, gas prices in October were down 8.4% on the previous month, the largest monthly fall in gas prices since comparable figures have been available. This contributed 0.1 percentage points to the fall in year-on-year inflation. Prices of footwear rose by less than in October of last year, which reduced their contribution to year-on-year inflation by 0.2 percentage points. Food prices rose in October. Excise duties on tobacco were raised for the

Note: Figures may not sum up to official figures due to rounding.

third time this year, causing a rise of 6.6% in prices of tobacco products in September, while prices of meat rose by 2.6%.

In October, year-on-year growth in industrial producer prices on the domestic market increased. It was up 0.3 percentage points on the previous month at 1.2%, as a result of higher year-on-year growth in commodity prices and prices of consumer non-durables. The year-on-year fall in prices in the manufacture of basic metals diminished for the second consecutive month, increasing year-on-year growth in commodity prices. Of consumer non-durables, year-on-year growth in prices in the manufacture of food products and goods not specified elsewhere increased. Monthly growth in food prices in the manufacture of food products was the highest since January 2008, at 1.2%. This rise was expected on account of July's rise in food prices on global markets. Year-on-year growth in prices of consumer durables and energy prices also increased to a lesser extent, while year-on-year growth in prices of capital goods declined. Year-on-year growth in industrial producer prices on the domestic market remains below the euro area average.

4 | Balance of Payments

Current Account

Despite minor fluctuations in individual months, the current account surplus has increased rapidly this year. After a small deficit in August, September saw a current account surplus of EUR 170 million, which is just over two-fifths of the cumulative current account surplus over the first nine months of this year. The largest factors in September's current account surplus were an increase in the surplus of trade in services and the second relatively high surplus in merchandise trade this year. The deficits in factor income and in transfers remained at their levels of August. The current account surplus over the

preceding 12 months increased to EUR 374 million or 1.0% of GDP in September, compared with a deficit of 0.1% of GDP a year earlier.

In September, merchandise imports and exports declined sharply, and merchandise trade was also weak across the third quarter. In September, nominal imports were down 13.3% in year-on-year terms, while nominal exports were down 5.0%. After recording year-on-year growth of just 0.3% in the second quarter, exports stagnated in the third quarter, while the year-on-year decline in imports accelerated from 1.9% to 4.1%. In September, the trend rate of growth in merchandise trade also slowed sharply. Export growth was barely positive, while imports declined sharply. There were several factors in September's decline in merchandise trade: the deterioration in the economic situation, particularly in EU Member States,² and on the import side the further contraction in domestic consumption, and value effects caused by the fall in prices of certain non-food commodities and energy prices.

The cumulative merchandise trade deficit has been diminishing rapidly this year. During the first nine months of the year, the merchandise trade deficit narrowed by more than a half in year-on-year terms to EUR 307 million,³ primarily thanks to favourable results in the

² Exports to EU Member States were down 6.8% in year-on-year terms in September, while exports to non-EU countries were down 2.4%.

³ According to SORS figures (fob for exports, cif for imports), and excluding any adjustments in coverage (explained in the Methodological Notes appendix to the bulletin), the merchandise trade deficit during the first nine months of the year amounted to EUR 823 million. The merchandise trade deficit with the EU27 amounted to EUR 1,675 million, and a surplus of EUR 851 million in merchandise trade with non-EU countries.

second quarter and in particular the third quarter, when a small surplus was actually generated. The merchandise trade deficit in the 12 months to September amounted to 1.9% of GDP, compared with 3.1% of GDP a year earlier.

Without the refocus on markets outside the EU, this year's decline in export growth would be larger. According to SORS figures, merchandise exports to EU Member States in the first nine months of the year were down 2.1% in year-on-year terms, while exports to non-EU countries were up 6.2%. Merchandise imports from EU Member States during the same period were down 2.3% in year-on-year terms, while imports from non-EU countries were up 0.6%. In light of such export developments, the proportion of total merchandise exports accounted for non-EU countries during the first nine months of the year increased by 1.8 percentage points in year-on-year terms to 30.7%.

In the third quarter, exports of all BEC categories of goods declined. The slowdown in exports this year was most pronounced in exports of capital goods. After recording year-on-year growth of 5.1% in the first quarter and 4.3% in the second quarter, exports of capital goods were down 0.7% in year-on-year terms in the third quarter. Growth in exports of intermediate goods slowed similarly, from 4.7% in the first quarter to -0.6% in the third quarter. The austerity measures in the EU are being reflected most evidently in exports of consumer goods, which recorded a year-on-year decline in all three quarters. Exports of intermediate goods to EU Member States during the first nine months of the year were down 0.9% in year-on-year terms, while those to non-EU countries were up 6.9%. Growth in exports of capital goods was positive at 1.9% for EU Member States and 5.4% for non-EU countries. The largest differences were in the rates of growth in exports of consumer goods, which indicates that austerity in the EU is being implemented most intensively by the household sector. Exports of consumer goods to EU Member States were down 5.8% in year-on-year terms, while exports to non-EU countries were up 6.6%.

Alongside weaker exports, the decline in merchandise imports of all BEC categories of goods is increasingly the result of contracting domestic de-

mand. As expected, there were sharp declines in imports of consumer goods and capital goods during the first nine months of the year, by 4.6% and 4.0% respectively. Imports of intermediate goods were unchanged, in line with manufacturing output. The decline in economic activity, the deep-rooted austerity measures and job insecurity are reducing final household consumption. This has affected imports of consumer goods. After recording year-on-year growth of 2.6% in the first quarter, imports of consumer goods were down 8.3% in the second quarter and 7.6% in the third quarter in year-on-year terms.

In September, growth in trade in services also slowed. Imports of services were down 2.7%, while exports were up 1.0%. With the gap by which export growth outpaces import growth widening, September's surplus of trade in services was up in monthly and year-on-year

terms. During the first nine months of the year, imports of services amounted to EUR 2.6 billion, up 0.4% in year-on-year terms, while exports were up 4.7% at EUR 3.8 billion. The surplus of trade in services was up EUR 167 million in year-on-year terms at EUR 1,239 million, or 4.6% of GDP.

As merchandise trade slows, year-on-year growth in exports of transport services is also slowing. It stood at just 0.6% in the third quarter. During the first nine months of the year, imports of transport services were down 3.0% in year-on-year terms, while exports were up 2.6%. The result of these developments was a year-on-year increase of EUR 41 million in the surplus of trade in transport services to EUR 481 million.

Year-on-year growth in exports of travel services has been gradually slowing, while imports stagnated in

the third quarter after falling in the first half of the year. During the first nine months of the year, exports of travel services were up 3.4% in year-on-year terms, while imports of travel services were down 2.5% despite stagnation in the third quarter. The surplus of trade in travel services thereby widened by EUR 69 million in year-on-year terms to EUR 905 million.

Year-on-year growth in exports of other services (other than travel and transport) has strongly outpaced growth in imports this year, as a result of which the deficit in trade in other services is diminishing rapidly. Over the first nine months of the year, it narrowed by EUR 57 million in year-on-year terms to EUR 147 million. Positive contributions to the overall surplus of trade in services came from services in the construction sector, even though they declined in year-on-year terms on both the import and export sides, and from foreign trade intermediation services. The remaining services generated a total deficit of EUR 343 million. Intellectual property services recorded the largest deficit, at EUR 151 million.

After a large increase in the first quarter, the deficit in factor income narrowed in year-on-year terms in the second and third quarters. Over the first nine months of the year, it amounted to EUR 476 million, up just EUR 9 million in year-on-year terms. At the same time, the surplus in labour income was up just over a third in year-on-year terms at EUR 201 million, primarily as a result of

faster growth in inflows in the first half of the year. The deficit in capital income widened by EUR 75 million in year-on-year terms to EUR 676 million.

During the first nine months of the year, inflows and outflows of capital income were down in year-on-year terms. Inflows were down just over a third, while outflows were down just under a tenth. FDI was the largest factor in the decline in inflows and outflows of capital income. Inflows of income from FDI were down EUR 115 million in year-on-year terms, primarily as a result of a decline of EUR 200 million in the stock of domestic outward FDI (a decline in reinvested earnings and undistributed profits). The decline in loans to the rest of the world and investments in debt securities has also brought a year-on-year decline in income from these investments. Inflows of income from interest and from investments in foreign securities in the third quarter were down 30% and 11.5% respectively in year-on-year terms. Cumulatively over the first nine months of the year, the figures were both down more than 17% in year-on-year terms. At the same time, outflows of capital income were down 9.1% in year-on-year terms. Outflows of income from inward FDI fell by 3.2% in year-on-year terms. Similarly to the inflow side, the decline in the stock of FDI (positive reinvested earnings and undistributed profits) contributed EUR 176 million. As a result of past debt repayments, interest payments declined by 6.3%, while payments of income on non-residents' investments in domestic securities declined by 15.8%. During the first nine months of the year,

interest payments and income from investments in securities accounted for more than two-thirds of the outflows of capital income in the amount of EUR 963 million.

With the exception of the second quarter, current transfers have been in deficit. The position in transfers deteriorated sharply. During the first nine months of the year, the cumulative deficit reached 48 EUR million, compared with a surplus of EUR 91 million in the same period last year. Government transfers have been a major factor in this year's unfavourable results: inflows were down EUR 29 million in year-on-year terms, while outflows were up EUR 65 million. Of the total year-on-year deterioration in the amount of EUR 139 million, government transfers accounted for more than two-thirds or EUR 94 million, while private transfers accounted for the remainder.

Capital and Financial Account

September saw a net outflow of funds to the rest of the world as a result of an increase in the private sector's claims against the rest of the world. The largest increase on the claim side was recorded by trade credits granted to the rest of the world and investments in foreign securities. Liabilities to the rest of the world also increased slightly, primarily as a result of trade credits received and FDI. The net external debt amounted to EUR 13.9 billion at the end of September, up EUR 257 million on the previous month. The main factors in the increase were the banks and the government sector. Corporates, households and other financial institutions (other sectors) again increased their net external surplus.

September's increase of EUR 176 million in the private sector's claims against the rest of the world was the result of increases in the vast majority of the different types of claims. The largest increase was in trade credits granted to the rest of the world, by 61 million EUR. Outward FDI increased by EUR 15 million, while outward portfolio investments increased by EUR 60 million, primarily as a result of an increase in domestic corporates' investments in foreign debt securities. In September, the private sector increased its holdings of currency and deposits in the rest of the world by EUR 18 million, the household sector having made the largest contribution of

EUR 147 million. For the first time this year, loans granted to the rest of the world increased, by EUR 9 million. During the first nine months of the year, the private sector reduced its exposure to the rest of the world via loans by EUR 462 million overall.

In September, liabilities to the rest of the world increased by EUR 43 million, the largest contributions coming from increases in liabilities from trade credits and FDI. Non-residents' inward FDI increased by EUR 37 million, while trade credits increased by EUR 63 million. For the first time since last September, the banks increased their liabilities from loans, by EUR 19 million. Nevertheless, loan repayments of EUR 874 million were made overall during the first nine months of the year. The

majority of the repaid loans were long-term loans, the stock of which has declined by EUR 894 million this year. In September, non-affiliated corporates again made debt repayments to the rest of the world, in the amount of EUR 41 million. Whereas corporates raised EUR 25 million in foreign loans during the first nine months of last year, the stock of foreign loans declined by EUR 13 million during the same period this year. Another likely factor in this decline was the contraction in investment by domestic corporates in the first three quarters. Despite the successful issue of SID banka bonds with a nominal value of EUR 150 million, foreign portfolio investments in domestic securities declined again, by EUR 65 million. Over the first nine months of the year, the cumulative outflow from this source amounted to EUR 1,187 million.

At the end of September, the net external debt amounted to EUR 13.9 billion, up EUR 257 million on the previous month. The breakdown by sector reveals that increases in net external debt were recorded by the banks, including the Bank of Slovenia, and the government sector. Households, corporates and other financial

institutions again increased their net external surplus slightly. September's increase in the net external debt was the result of a decline in gross claims (EUR 133 million) and an increase in the gross debt (EUR 124 million). The central bank and banking sector reduced their gross claims, while the other sectors recorded an increase in

gross claims. This increase in the gross external debt was primarily the result of an increase in the government sector's gross debt.

5 | Public Finance

The consolidated general government deficit is continuing to diminish in year-on-year terms as a result of the reduction in expenditure. During the first nine months of the year and according to the cash flow methodology, the consolidated general government deficit reached EUR 1,114 million, EUR 227 million less in year-on-year terms. The narrowing of the deficit was the result of a contraction in expenditure. All items of expenditure are falling, other than interest and payments into the EU budget. The deficit has been narrowing in year-on-year terms since March, which since the middle of the year has also been the result of measures introduced by the Law on Balancing Public Finances. The largest factor in the reduction in the consolidated general government deficit was the narrowing of the state budget deficit. During the first ten months of the year, this amounted to EUR 1,099 million, EUR 87 million less than the Ministry of Finance estimation for the year published in the Reporting of Government Deficits and Debt Levels. During the

first ten months of the year, the deficit of the Health Insurance Institute stood at EUR 32 million, EUR 22 million less in year-on-year terms. The narrower deficit was primarily the result of excessive transfers of revenue, which the HII repaid to the Tax Administration in November. The HII is estimating a deficit of EUR 94 million at year end, significantly more than the spring estimate of EUR 50 million. During the first nine months of the year, local government recorded a surplus of EUR 48 million, up EUR 26 million in year-on-year terms.

Published by the European Commission in November, the estimate for this year's general government deficit does not differ significantly from the Ministry

of Finance's October expectations. In its most recent forecasts, the European Commission foresees a government deficit of 4.4% of GDP according to the ESA 95 methodology, similar to its spring estimate (4.3% of GDP) and the Ministry of Finance's expectations (4.2% of GDP). The main risk of a wider deficit this year comes from potential bank recapitalisations from public funds. According to European Commission figures, the deficit is expected to fluctuate around 4% of GDP in the next two years, more than the April estimate in the Stability Programme, which foresees a reduction in the deficit to 2.5% of GDP in 2013 and 1.5% of GDP in 2014. Under the excessive deficit procedure, Slovenia must cut its general government deficit to below 3% of GDP by no later than 2013, and must maintain it below that level.

In the first nine months of the year, general government revenues were down slightly in year-on-year terms, primarily as a result of lower tax revenues.

General government revenues were down 0.5% or EUR 59 million in year-on-year terms. The main decline was in tax revenues, while non-tax revenues and revenues from the EU budget were up in year-on-year terms. The main

factors in the decline in tax revenues are weak economic activity and the adverse situation on the labour market, which is hindering fiscal consolidation. The largest decline in tax revenues has been recorded by corporate income tax, partly as a result of this year's tax refunds during settlements for last year. There were also major changes to this tax, including a gradual cut in the tax rate and an increase in the allowances for investment and for research and development. These revenues can thus be expected to fall further in the future. Revenues from excise duties were up in year-on-year terms, excise duties on all products subject to excise duty having been raised this year. In the first ten months of the year, inflows from the EU budget were up in year-on-year terms. The net position against the EU budget during this period was positive (inflows from the EU budget were EUR 225 million higher than outflows), but the surplus was slightly lower than in the same period last year.

General government expenditure is falling faster than revenues, which is allowing for fiscal consolidation. During the first nine months of the year, expenditure was down 2.3% or EUR 286 million in year-on-year

terms. All types of expenditure are falling, other than interest and payments into the EU budget. The largest declines during this period were recorded by investment expenditure and investment transfers, which also declined in the preceding two years. Expenditure on goods and services has fallen sharply for the second consecutive year, while transfers to individuals and households (various forms of social assistance and unemployment benefits in particular, but pensions less so) and the gross wage bill have also contracted this year. In the first nine months of the year, the gross wage bill fell by 2.8%, although the contraction was smaller once the deferral of the prepayment to healthcare service providers from September to October is taken into account. The wage bill has been falling since May, and has also reflected the effects of the Law on Balancing Public Finances in the second half of the year. During the first nine months of the year, interest payments increased by EUR 95 million, while payments into the EU budget increased by EUR 30 million.

In the first nine months of this year, consolidated general government borrowing amounted to EUR 1.1 billion, but rose to just over EUR 3 billion in October as a result of the issue of 10-year reference government bond. In the first nine months of the year, the government borrowed EUR 1.1 billion by issuing treasury bills and by raising long-term loans at the domestic banks. Borrowing in October was undertaken via the issue of 10-year US dollar bond (EUR 1.7 billion), via long-term loans at domestic banks (EUR 200 million) and via a treasury bill issue (EUR 89 million). The Ministry of Finance generated proceeds of EUR 36 million in November via treasury bills. Investors' bids were almost three times in excess of the issue, and the nominal annual interest rate at issue was lower than that achieved in the previous auction. The government also reduced its funds in bank accounts (by EUR 1.3 billion).

The yield-to-maturity on 9-year Slovenian government bond began to rise slightly towards the end of October, but fell again towards the end of November. In the second half of October, the minimum yield-to-maturity on 9-year government bond stood at 5.4%, but

Spreads on 10-year government bonds as compared to Germany

Sources: Bloomberg, Bank of Slovenia calculations.

Note: Spread is calculated as a difference between yield of 10-year government bond and the yield of reference German bond on a daily basis and is used as a measure of country's credit risk. *In the picture, SLOREP 01/21 is used after 11. January 2011.

then gradually rose before falling to 5.3% towards the end of November after agreement was reached on further assistance for Greece. The average spread over the benchmark 10-year German government bond was lower in November than in October, at 409 basis points. There were similar movements in the spreads on the bonds of other euro area periphery countries in November.

6 | Banking System*

The contraction in the banking system's total assets continued in September. The banking system's total assets have declined continually since April, and are down EUR 1.9 billion this year, taking the year-on-year change to -5.2% in September. The main factor on the funding side in September's decline of EUR 348 million in total assets was a decline in deposits by the non-banking sector and net repayments of issued debt securities. Lending to non-banking sectors continued to contract. Alongside the decline in corporate lending, largely as a result of impairments, another factor was the decline in lending to households.

The stock of loans is declining. Lending to the non-banking sector (NBS) fell faster in September than on

* This section uses data from the banks that report to the Bank of Slovenia in accordance with the Guidelines for implementing the resolution on reporting by monetary financial institutions. Because of methodological differences, these figures differ from the published statistics.

average this year as a result of the large domestic banks. The stock of loans to the NBS declined by EUR 181 million, of which the large domestic banks accounted for EUR 136 million. Year-on-year growth in net loans to the NBS stood at -5.5% in September, while growth in gross loans excluding impairments stood at -2.7%.

The contraction in lending to non-financial corporations (NFCs) continued in September. The decline of EUR 134 million in loans exceeded this year's average and August's decline, the large domestic banks accounting for the majority of the decline. Year-on-year growth in net loans to NFCs stood at -8% in September. Growth in gross loans to NFCs excluding impairments was just over 3.5 percentage points higher.

Year-on-year growth in loans to households remained negative, at -1.8%. The stock of loans to households declined for the sixth consecutive month in September, by EUR 9 million, taking the decline over the first nine months of the year to EUR 167 million. The large domestic banks also recorded the largest decline in lending to households, at 3.9% in year-on-year terms in September, with only the small domestic banks continuing to record positive growth, at 3.7%. Year-on-year growth in housing loans had slowed to 2.3% by the end of September, while growth in consumer loans stood at -7.5%. The decline in housing lending and the contraction in consumer loans seen for more than two years now are a reflection of the situation on the real estate market and the deterioration in the economic situation.

The stock of securities on the asset side of the balance sheet is declining. Growth in the banks' investments in securities has been negative since the final quarter of 2010. The banks are also adapting to the contraction in funding by reducing their stock of securities. The stock of securities at banks has declined by EUR 614 million this year, or just under a third of the decline in total assets. The proportion of total assets accounted for by securities remains stable at 15.5%.

In contrast to previous months, the banks did not make debt repayments to banks in the rest of the world in September. The stock of issued debt securities at banks also declined slightly. The banks under majority foreign ownership contributed EUR 19 million to the net increase in liabilities to banks in the rest of the world. The banking system's net debt repayments to banks in the rest of the world amounted to EUR 1.5 billion during the first three quarters of this year, the banks under majority foreign ownership accounting for EUR 953 million of this. This year they have only partly revolved their liabilities to the rest of the world, and have increasingly focused on funding on the domestic retail market. The main factors in September's decline of EUR 135 million in the stock of issued debt securities were the final repayment of the outstanding Abanka 3-year bonds and a bond issue by SID banka. This year the banks have repaid EUR 1.4 billion via issued debt securities.

The pace of the decline in deposits by the non-banking sector coincides with the pace of the decline

in total assets. Year-on-year growth in deposits by the non-banking sector stood at -5.1% in September. The main factor in the decline in deposits was the government sector, which accounted for EUR 858 million of the decline of EUR 1,124 million. All sectors recorded a decline in deposits in September, other financial institutions recording the largest decline of EUR 142 million. Household saving at banks declined. Year-on-year growth was negative for the second consecutive month in September, at -0.8%. As net debt repayments were made to the rest of the world, deposits by the NBS have increased in relative importance in the funding of the banks under majority foreign ownership, although the proportion of funding that they account for is still much lower than at the domestic banks.

The banks recorded a pre-tax loss of EUR 76 million during the first three quarters of this year. The decline in net interest income and the persistently large impairment and provisioning costs are keeping the banks' income risk high. Net interest income during the first nine months of the year was down just over 10% on the same period last year. The main factor was continually declining interest income, growth in which stood at -8.2% at the end of September. The decline is a reflection of the decline in the stock of loans and of impairments. Growth in interest expenses has also been negative since June, as a result of the decline in the stock of funding and lower interest rates on the international financial markets, and as a result of a more favourable funding structure. The banks have seen interest expenses decline as a result of an increase in the proportion of funding accounted for by liabilities to the ECB, and a decline in more costly funding via debt securities. The banking system's gross income during the first nine months of the year was up 13% on the same period last year. Impairment and provisioning costs amounted to EUR 86 million in September, taking the total during the first nine months of the year to EUR 732 million, up 20% on the same period last year. They accounted for 61% of the disposal of gross income, and were a major factor in the banks' poor performance.

7 | Financial Markets

The SBI TOP was virtually unchanged in October. It rose by 0.3% in October to end the month at 593 points, taking the year-on-year change to -7.7%. As a result of its takeover by Factor banka d.d., KD Banka d.d. was delisted at the end of October, and had its membership of the Ljubljana Stock Exchange revoked at the beginning of November. On 26 October the Beaulieu International Group completed its acquisition of 52.4% of Juteks d.d., and announced that it intends to make an offer to purchase all the remaining shares. The market capitalisation of shares on the Ljubljana Stock Exchange rose by 0.4% in October to EUR 4,647 million, down 5.7% in year-on-year terms. The volume of trading in shares was up 5.3% on September at EUR 34.9 million. Shares on the prime market accounted for the majority of trading on the Ljubljana Stock Exchange. Krka shares recorded the largest volume, partly as a result of the company purchasing its own shares. The market value of its own shares held in treasury amounted to EUR 107 million at the end of October, equivalent to 6.348% of all issued Krka shares. The dividend yield on the prime market stood at 4.2% at the end of October.

The market capitalisation of bonds on the Ljubljana Stock Exchange rose by 0.6% in October to EUR 12.9

billion. SID banka d.d. made a prepayment in the amount of EUR 20 million for its bonds with the ticker symbol of SEDABI. At the same time it made a private placement of 1-year bonds in the amount of EUR 60 million. This took the total issue to EUR 210 million, with a fixed coupon rate of 3.42% and a yield to maturity of 3.26% at the time of the placement. The Ministry of Finance issued 3-month TZ140 and 6-month SZ57 treasury bills in the amounts of EUR 26.9 million and EUR 62.3 million respectively. On 19 October the Slovenian government issued a reference 10-year government bond with a nominal value of USD 2.25 billion on the American market. The yield amounted to 5.5% after currency conversion, while the coupon rate was 5.3%. The yield was approximately 20 basis points less than the rate Slovenia would be able to borrow at on the European bond market. At the end of October the Ljubljana Stock Exchange changed its rules on the structure of the stock market. Previously traded on the structured products market, commercial paper will be transferred to the bond market, where it belongs, given the nature of the product. Government bonds accounted for 92.3% of the market capitalisation of bonds, bank bonds for 4.5% and corporate bonds for 3%. The volume of trading in bonds amounted to EUR 2 million in October, the lowest monthly volume since the middle of 2011. The largest volumes were recorded by 2nd-issue Slovenska odškodninska družba bonds, 2nd-issue Zavarovalnica Triglav bonds, 2nd-issue Petrol bonds and 26th-issue NLB bonds. The aforemen-

tioned bonds accounted for 94% of the total volume of trading in bonds. Their market capitalisation accounted for just 4.3% of the total market capitalisation of bonds in October. The proportion of total stock exchange volume accounted for by bonds fell by 15.1 percentage points in October to 5.5%.

The global financial markets were volatile in October.

The announcement of the official establishment of the European Stability Mechanism had a positive impact on the markets in the first half of October. The Case-Shiller index revealed the situation on the US real estate market to be improving. However the mood on the financial markets deteriorated in the second half of October. The American indices were hit by Hurricane Sandy, which caused serious material damage and resulted in the closure of the New York stock exchange for several days. The financial markets responded negatively to the re-election of President Obama, anticipating stricter supervision of financial markets and the introduction of new tax legislation in the area of capital gains. American and European corporate results in the third quarter were mostly worse than expected. Germany's Federal Statistical Office reported a slowdown in growth in the German economy, which could undergo a contraction in the final quarter. By contrast, the PMI for the manufacturing sector in China began rising, as a result of which Hong Kong's HSI rose by 3.8% in October. The DJ EuroStoxx 50 for western Europe rose by 1.6% and Germany's DAX rose by 0.6%, while the S&P 500 in the US fell by 2% and the MSEMEE for eastern Europe fell by 2.6%. Serbia's BELEX 15 recorded the largest rise of the Balkan indices, at 4.3%, while Croatia's CROBEX rose by 2.3% and Bosnia and Herzegovina's FIRS rose by 0.9%. Macedonia's MBI fell by 4.4%.

The proportion of the market capitalisation of the Ljubljana Stock Exchange accounted for by non-residents rose to 13.1% in October.

Non-residents made net purchases of EUR 42.5 million in Slovenian shares and EUR 23.5 million in Slovenian bonds. The net investment by non-residents in Slovenian shares was primarily the result of the second round of the capital increase at Volksbanka by Austria's Volksbank International in the amount of EUR 18.3 million and the purchase of a

majority holding in Juteks by Belgium's Beaulieu International Group in the amount of EUR 15.1 million. The largest net purchasers of bonds were residents of Belgium (EUR 281.7 million), while the largest net sellers were residents of Luxembourg (EUR 298.3 million).

Slovenian residents made net purchases of EUR 18.5 million in foreign equities and net sales of EUR 28 million in foreign debt securities in October. Net purchases of shares were made by other financial intermediaries (EUR 22 million) and by insurance corporations and pension funds (EUR 21.5 million). They primarily purchased American and European equities. The largest net sales of foreign shares were made by households, in the amount of EUR 19 million. The banking sector recorded EUR 19 million of sales in bonds, most notably bonds of issuers in the euro area. The main net purchasers of foreign bonds were other financial intermediaries (EUR 4.7 million).

The domestic mutual funds' assets under management declined to EUR 1,845 million in October, as a result of a fall of 0.2% in the average unit price and net withdrawals of EUR 2.7 million. Households recorded the largest net withdrawals, at EUR 4 million. Corporates and banks made net withdrawals of EUR 2.5 million and EUR 1.2 million respectively from mutual funds. Insurance corporations and pension funds recorded net inflows into mutual funds of EUR 4.2 million in October. Equity funds were the only mutual funds to record net inflows, of EUR 7 million, primarily as a result of the positive mood on the financial markets in the first half of October. Other funds recorded net withdrawals, balanced funds recording the largest withdrawals of EUR 5.4 million. Equity funds held 68% of mutual funds' total assets under management at the end of October, while balanced funds held 26%. The proportion of assets under management held by bond funds stood at 5%, while money-market funds held just over 1% and the proportion held by other funds was negligible. The proportion of the domestic mutual funds' assets under management accounted for by liquid assets⁴ fell to 11.4 %.

IV. NOTES ON METHODOLOGY

General notes

Sectors

For data from 30 April 1999 onwards, a sectorization has been implemented according to the Regulation on Introduction and Implementation of Standard Classification of Institutional Sectors (hereinafter SKIS), published in the Official Gazette No. 56/98. SKIS, which implemented a national standard for economic sectorization, based on the European System of Accounts 95 and is in accordance with the System of National Accounts 93. According to SKIS, the economy is divided into the following sectors: non-financial corporations, financial corporations (central bank, commercial banks, and other financial institutions), general government, households, non-profit institutions serving households, and the external sector (non-residents).

The external sector comprises non-residents; the domestic sector, residents.

Residents of the Republic of Slovenia are defined as:

- companies and other legal entities with a registered office in the Republic of Slovenia, not including their branches abroad;
- branches of foreign companies entered in the Register of Companies of the Republic of Slovenia;
- sole proprietors or natural persons independently performing business activities as their primary occupation, with a registered office in the Republic of Slovenia or having permanent residence in the Republic of Slovenia;
- natural persons with permanent residence in the Republic of Slovenia;
- natural persons temporarily residing in the Republic of Slovenia, holding a residential or working visa valid for no less than six months; and
- diplomatic, consular and other representative offices of the Republic of Slovenia abroad which are financed from the Budget, as well as Slovene citizens employed at these representative offices and their family members.

All other persons and entities shall be deemed non-residents.

The domestic sector is broken down to the monetary sector and non-monetary sectors. The monetary sector consists of the Bank of Slovenia and other monetary financial institutions (banks, savings banks and money market funds). Domestic monetary financial institutions, owned by both residents and non-residents, are included.

Non-monetary sectors are: non-financial corporations, non-monetary financial institutions, general government, households, and non-profit institutions serving households. Non-financial corporations (enterprises) are legal persons – market producers of goods and non-financial services.

The non-monetary financial institutions sector comprises other financial institutions. Other financial institutions are: other financial intermediaries, except insurance corporations and pension funds (mutual funds, investment funds and financial leasing companies), financial auxiliaries (securities brokers/dealers, stock exchanges) and insurance corporations and pension funds.

The general government consists of the central government (administrative departments of state and central government agencies), local government (local administration, local agencies) and social security funds.

“Households” refers to resident individuals as consumers, resident individuals as sole proprietorships, and partnerships being market producers and having no independent legal status. The data of the latter, prior to 30 April 1999, were included in the enterprises sector.

Non-profit institutions serving households are clubs, political parties, trade unions, churches or religious societies, humanitarian and charity organizations, and professional societies.

Characteristics of the data

- The data present stocks of assets and liabilities at the end of the period.
- Data on stocks denominated in foreign currencies are converted into domestic currency using the official end-of-period middle exchange rate.
- Data in tables are not seasonally adjusted.

Table: Republic of Slovenia: General Information

The table shows basic general data on Slovenia and its economy. In the "Latest actual" column, the latest available data for the current year are published. Sources of the data are the Bank of Slovenia, the Ministry of Finance and the Statistical Office of the Republic of Slovenia.

1. MONEY AND MONETARY FINANCIAL INSTITUTIONS

Data in all tables present stocks items at the end of the period. Last published data are preliminary.

The change in the reporting could cause some inconsistencies in conceptual definitions of some items in the year 2005 data.

Until the end of December 2006 the data is published in the currency SIT, from 1 January 2007 the data is published in the currency EUR. The currency EUR in the data until the end of December 2006 is considered as foreign currency, from 1 January 2007 as domestic currency.

Change of Methodology

In May 2006 the tables of the Money and Monetary Financial Institutions chapter, have been changed. Structurally similar tables are based on the methodology of the European Central Bank (ECB) or of the euro area and no more on the methodology of the International Monetary Fund. The data source for the data of the MFI's in the changed tables is the report of the monetary financial institutions and not the bookkeeping report of the banks and savings banks. The main methodological changes are explained below.

The data from the new tables is available since December 2004, while the time series of the old tables up to March 2006 are still available on the Bank of Slovenia internet page (<http://www.bsi.si/en/>).

The main differences between the methodology of the ECB and the tables in the monthly bulletin up to April 2006 are as follows:

- The sector of the monetary financial institutions, MFI, contains banks, savings banks, savings and loans undertakings and money market funds, but it does not include old LB in KBM banks, while the banking sector without savings banks, savings and loans undertakings and money market funds but with the old LB and KBM is presented in the old bulletin tables.
- Balance sheet total according to the ECB's methodology differs from the balance sheet total according to the IMF's methodology mainly because of the different treatment of the loans. The loans are recorded on gross basis in the new tables and net of provisions in the old set. Consequently the stock of the loans is different.
- There is a difference among the stock of the items loans and deposits and debt securities – among the claims and liabilities, because of the inclusion of the negotiable/non-negotiable securities into the items loans/deposits and debt securities. According to the ECB's methodology, the non-negotiable debt securities are included into the loans/deposits and the negotiable debt securities into the debt securities.
- According to the ECB's methodology, the deals by procurement and internal affairs are included on a net basis, while before they were shown on a gross basis.
- There are differences in the composition of monetary aggregates according to national definition and harmonized monetary aggregates according to the ECB's definition that are described below.

Since April 2006 the data of the specific balance sheet items (loans, deposits, securities other than shares and issued debt securities) are in line with the ECB's request recorded according to their nominal values. The nominal value of a specific instrument is an amount of the principal, which is owed by the debtor to the creditor:

- loans: unpaid principal, not included the accrued interest, the commissions and other expenses,
- deposits: amount of the time deposits, the accrued interest not included,
- debt securities: nominal value.

Interest, which is subscribed to the principal and thus increases it, is the component of the nominal value.

Description of the balance sheet instruments

Below is a short description of the balance sheet aggregate items or instruments, as defined by the European Central bank:

Cash

Holdings of domestic and foreign banknotes and coins in circulation that are commonly used to make payments.

Loans

For the purposes of the statistical reporting scheme, this item consists of funds lent by reporting agents to borrowers, which are not evidenced by documents or are represented by a single document (even if it has become negotiable). It includes assets in the form of deposits, bad debt loans, in respect of which repayment is overdue or otherwise identified as being impaired, traded loans, subordinated debt in the form of deposits or loans and claims under reverse repos. The stock of loans is included into the item according to the "gross" principle.

Securities other than shares

Holdings of securities other than shares or other equity, which are negotiable and usually traded on secondary markets or can be offset on the market, and which do not grant the holder any ownership rights over the issuing institution. Besides negotiable debt securities this item includes: negotiable loans that have been restructured into a large number of identical documents and that can be traded on secondary markets and subordinated debt in the form of debt securities. The item does not include the accrued interest – which are classified into the item remaining assets, except when the separation is not possible (when the interest is the inseparable part of the market price).

Shares and other equity

Holdings of securities which represent property rights in corporations or quasi-corporations. These securities generally entitle the holders to a share in the profits of corporations or quasi-corporations and to a share in their own funds in the event of liquidation. Mutual fund shares and money market fund shares/units are included here.

Remaining assets

This item may also include: financial derivative positions with gross positive market values, non-financial assets (tangible or intangible), accrued interest receivable on loans and securities, the surplus from the deals by procurement, internal affairs.

Deposits

Amounts owed to creditors by reporting agents, other than those arising from the issue of negotiable debt securities. Deposits also cover loans as liabilities of MFIs, which represent amounts received by MFIs that are not structured in the form of deposits, non-negotiable debt securities issued, liabilities for the loans received and where they are not separately stated also deposits redeemable at notice, repos and traded loans.

Debt securities issued

Securities other than equity issued by reporting agents, which are negotiable and usually traded on secondary markets or which can be offset on the market, and which do not grant the holder any ownership rights over the issuing institution, and the subordinated debt issued by MFI's in the form of the debt securities. The accrued interest are not included in the stock data, but classified to the remaining liabilities. The amount of debt securities is shown net of own purchase.

Capital and reserves

This category comprises the amounts arising from the issue of equity capital, including also non-distributed benefits or funds, specific and general provisions against loans, securities and other types of assets. The item is adequately netted for the own shares owned. This item also includes the difference between the revenues and expenditures during the year and the money market fund shares/units issued.

Remaining liabilities

The remaining liabilities consist of accrued interest payable on deposits and debt securities, provisions representing the liabilities vis-à-vis third persons, gross amounts payable in respect of transit items, financial derivative positions. The surplus of the liabilities over claims from the deals by procurement, internal affairs is also included here.

Tables

In May 2006 the tables from 1.1. to 1.8 have been changed and substituted with the new ones, which enables partial continuity of the old time series.

The entry to the euro area (on 1.1.2007) caused a break in the time series of the statistical tables in the Monthly bulletin in cases where the "currency" is an attribute. An expected reclassification of the data between the individual columns in the tables, which keep the same name takes place, for example of the stock of outstanding loans in euros from the time series of "foreign currency" before the introduction to the time series of "domestic currency" after the introduction of euro. To enable easier reconstruction of this change, the shares of the Euro amounts in stocks of the foreign currency on 31.12.2004, 31.12.2005 and 31.12.2006 are published in the Methodological notes for the tables 1.3, 1.4, 1.5 in 1.6, where the reclassification occurred.

Note 1: With the publication of April 2011 data the corrected time series on Deposit with agreed maturity and Deposit redeemable at notice (Tables 1.2., 1.4., 1.6.) were published for the period January 2009 to May 2010 due to the change on the source of the data.

Table 1.1.: Monetary Aggregates

The table shows stock data at the end of month for monetary aggregates M1, M2 and M3, calculated according to the definition of the European Central Bank.

The main characteristics of monetary aggregates under the ECB's definition:

- Inclusion of liabilities of MFI sectors to EMU non-monetary sectors,
- Exclusion of the monetary neutral sector (the central government has the status of a monetary neutral sector),
- Limited maturity of items included (liabilities of up to 2 years and deposits redeemable at notice of up to 3 months only),
- Equal treatment of the liabilities in domestic and foreign currency,
- Inclusion of the money market fund shares/units into M3.

Composition of monetary aggregates, as defined by the ECB is:

- M1 contains currency in circulation and overnight deposits,
- M2 includes beside M1 also deposits with agreed maturity of up to 2 years and deposits redeemable at notice of up to 3 months,
- M3 includes M2, repurchase agreements and debt securities with the maturity of up to 2 years and money market fund shares/units.

The table is split into two parts: the first part (before the entry of Slovenia into EMU until the end of December 2006) presents Monetary aggregates of Slovenia and the second part (after the entry of Slovenia into EMU from 1 January 2007 onwards) presents the contribution of Slovenia to monetary aggregates of EMU.

The item 'Currency in circulation' is calculated on the basis of the Capital Share Mechanism (CSM) which foresees the split of the total amount of issued banknotes in the euro area between the different national central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins (which are in fact the liability of the central government) are added to the total amount of banknotes. The item 'Cash' held by the MFIs is deducted from the total amount of currency (banknotes and coins).

The contribution of the Slovenia to the euro area monetary aggregates does not represent monetary aggregates of Slovenia. The concept of residency is the one of the euro area. Due to the consolidation within the MFI sector on the level of euro area countries the aggregate M3 could become smaller than M2.

Table 1.2.: Consolidated Balance Sheet of the Monetary Financial Institutions

The table shows the end of the month consolidated balance sheet of Bank of Slovenia and other monetary financial institutions, presented in the tables 1.3. and 1.4. The bilateral claims and liabilities of the sectors S.122 and S.121 are netted out. On the liability side of the balance sheet the liabilities to the central government sector (S.1311) in certain items are excluded and are included in the remaining liabilities.

The item 'Banknotes and coins' is for series after 1 January 2007 calculated on the basis of the Capital Share Mechanism (CSM) which foresees to split of the total amount issued in the euro area between the different National central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins (which are in fact the liability of the central government) are added to the total amount of banknotes.

Table 1.3.: Balance Sheet of the Bank of Slovenia

The table shows the Bank of Slovenia's assets and liabilities at the end of month in line with the methodology of the ECB. According to the ECB's methodology the item 'Banknotes and coins' includes the data of coins in circulation (which are in fact the liability of the central government) and excludes the data of issued payment notes, which are included in the remaining assets.

The item 'Banknotes and coins' is for series after 1 January 2007 calculated on the basis of the Capital Share Mechanism (CSM) which foresees to split of the total amount issued in the euro area between the different National central banks of the euro area with respect to their share in the capital of the ECB (8% of the total value of the euro area banknotes in circulation is allotted to the ECB). Coins are added to the total amount of banknotes.

no.	table	column	sector	title	share of euro		
					31.12.2004	31.12.2005	31.12.2006
1	1.3.	assets/ 3		Claims on foreign sectors (foreign assets)/ Foreign cash	58%	48%	54%
2	1.3.	liabilities/ 4		Liabilities/ Deposits/ Domestic sectors/ Other MFIs/ Foreign currency	100%	100%	-

Table 1.7.: Balance sheet of the Bank of Slovenia – by instruments

The table shows the data of the balance sheet of the Bank of Slovenia, split by instruments of the monetary policy. The table is composed according to accounting rules of the ECB and differs from the table 1.3. Balance Sheet of the Bank of Slovenia, which is composed according to the statistical methodology of the ECB.

Table 1.8.: Investment funds**General**

Methodology of investment fund statistics in Slovenia is based on Regulation (EC) No 958/2007 of the ECB of 27 July 2007 concerning statistics on the assets and liabilities of investment funds and Guideline of the ECB of 1 August 2007 on monetary, financial institutions and markets statistics (recast). Time series in tables are available from December 2008 on, when the new reporting of investment funds was introduced. The data is revised when publishing data for the next period.

Note 1: Financial sectors comprise Bank of Slovenia, other monetary financial institutions (banks, saving banks and monetary funds) and other financial institutions (other financial intermediaries, except insurance corporation and pension funds, financial auxiliaries and insurance corporations and pension funds).

Note 2: Non-financial sectors are formed by non-financial corporations, general government, households and non-profit institutions serving households.

Note 3: Monetary funds are included in the sector of other monetary financial institutions and not in the other financial intermediaries, where investment funds are classified.

Deposit

This item consists of transferable deposits (sight deposits) and other deposits. Other deposits are deposits, which cannot be used for payments and cannot be exchanged for transferable deposits without significant constraints or extra costs. They comprise deposits with agreed maturity, certificates of deposits, which are non-tradable or whose tradability, although theoretically possible, is very limited and other non-transferable deposits.

Debt securities

Debt securities are short-term or long-term.

Short-term ones include all instruments of monetary market with original maturity of one year or less.

Long-term debt securities are securities with original maturity of more than one year and include bonds, instruments of monetary market with original maturity of more than one year and other debt securities.

Interest-bearing securities are shown including interests. In case interests cannot be included with debt securities, they are shown separately under the item other assets.

Shares and other equity

The item includes shares and units/shares of investment fund.

Shares are financial assets, which represent the right of ownership to the joint-stock companies. These financial assets usually give the owners the right to certain share in profit of the joint-stock companies and to certain share in their net assets when winding up.

Units/shares of investment fund include units or shares of open-end and closed-end investment funds.

Other assets

Under this item the claims on sold or mature investment, claims on Asset Management Company and trustee, interest and dividend claims, claims on securities' obligations, other corporate claims, accruals and prepaid expenditure are reported. Accruals and prepaid expenditure include deferred expenses or costs, short-term accrued revenues and also deferred interests.

Financial derivatives are either financial assets or financial liabilities; in balance sheet they are recorded as unnetted.

Loans

The item includes loans borrowed, covering loans, repurchase agreements and other forms of loan as techniques and tools for managing the investments of investment funds.

Investment fund shares/units

Investment fund shares/units represent total liability to shareholders or investors of investment fund.

Other liabilities

The item other liabilities include corporate liabilities of investment fund, namely liabilities from financial instruments' purchase, management liabilities, tax liabilities, liabilities of distribution of profits or other payments to holders of units or shareholders, other corporate liabilities, accruals and income collected in advance and financial derivatives.

Accruals and income collected in advance include accrued costs or accrued charges and prepaid income. Under this item deferred interests are also reported.

2. FINANCIAL MARKETS AND PAYMENT SYSTEMS

Interest rates (tables 2.1–2.4)

Table 2.1: Bank of Slovenia Interest Rates

Lombard loan: Within the framework of a standing Lombard facility, the Bank of Slovenia provides one-day Lombard loans to banks and savings banks with securities used as collateral. The pledged securities should amount to 110% of the amount of the Lombard loan.

The *repo interest rate* for the temporary purchase of treasury bills and tolar and foreign currency bills of the Bank of Slovenia with obligatory repurchase in seven days was the weighted arithmetic average of daily repo interest rates until March 2004 (effective interest rate). The new seven-day repo was introduced in March 2004; it is offered on a closed basis. The interest rate given is the latest valid interest rate.

Interest rate on banks' obligatory reserves: 1 percent per year since October 1991.

The overnight-deposit interest rate is an interest rate applying to deposits placed by banks and savings banks on an overnight term with the Bank of Slovenia.

Long-term deposit at the Bank of Slovenia was established in July 2004. The variable interest rate is defined once every two months for the next two-month period. It refers to the interest rate for 60-day tolar bills valid at the time of quotation, increased by 0.2 percentage points.

Tolar bills are registered securities subscribed by banks and savings banks with a maturity of 60 or 270 days. Sixty-day bills are offered on a permanent basis; 270-day bills were sold by auction until February 2004, and since then have been offered on a closed basis. Interest rates for tolar bills are given nominally; in the case of auctions they are effective rates. Offers of 270-tolar bills have been frozen since November 2004.

Foreign currency bills are transferable registered securities not issued in series. They are offered on a permanent basis and can be purchased by banks (or by other legal persons through banks until 3 May 2000). They are sold for euros (or German marks until February 1999, or U.S. dollars until June 2006) at a discount with maturities of two to four months.

A penalty rate is generally employed in cases of overdue payments. The penalty rate has been determined by the Law on the Legal Penalty Rate since 28 June 2003.

Interest rates for a certain type of instrument in the table are those last valid in a period (except in the case of effective interest rates). The annual averages of interest rates are computed as simple arithmetic averages of monthly data, if such data are available.

Table 2.2: Interbank Money Market Rates and Indexation Clause

Interbank market

SIONIA/SITIBOR

Until 31 December 2006, the figures are annual nominal interest rates for unsecured Slovenian tolar deposits on the Slovenian interbank market. The interest rate for overnight deposits (SIONIA) is the weighted average interest rate for overnight deposits.

SITIBOR is the rate at which Slovenian interbank term deposits are offered by one prime bank to another prime bank.

SIONIA and SITIBOR were valid from 14 July 2003 to 31 December 2006. Break of series in January 2007.

EONIA/EURIBOR

Eonia® (Euro OverNight Index Average) is the effective overnight reference rate for the euro. It is computed as a weighted average of all overnight unsecured lending transactions undertaken in the interbank market, initiated within the euro area by the contributing banks.

The Euro Interbank Offered Rate – “Euribor®” – is the money market reference rate for the euro. It is sponsored by the European Banking Federation, which represents the interests of 4,500 banks in 24 Member States of the European Union and Iceland, Norway and Switzerland, as well as the Financial Markets Association. Euribor® is the rate at which euro interbank term deposits are being offered within the EMU zone by one prime bank to another

Indexation clauses

TOM

The tolar indexation clause (TOM) is an annual interest rate calculated by the Statistical Office of the Republic of Slovenia and used for preserving the value of financial liabilities and assets in domestic currency.

TOM (monthly): since 5 August 1995, the average of the previous 3 months' inflation. (Until June 1995, indexation was based on the so-called R, which was equal to the previous month's inflation rate; from 1 June to 4 August 1995, indexation

was based on the average of the previous 3 months' inflation.) From February 1996, 4 months; from December 1996, 6 months; and from May 1997, 12 months. Financial liabilities and assets in domestic currency with maturity less than 1 year have not been revalued since July 2002.

Foreign exchange indexation clause USD and CHF

The monthly rate is the growth rate of the end-of-month exchange rate for USD and CHF.

The annual rate is computed from the monthly rate on the conform basis, taking into account the actual number of days in the month and the year.

Table 2.3: European Central Bank Interest Rates

Counterparties can use the **deposit facility** to make overnight deposits with the NCBs. The interest rate on the deposit facility normally provides a floor for the overnight market interest rate.

Main refinancing operations are regular liquidity-providing reverse transactions with a frequency and maturity of one week. They are executed by the NCBs on the basis of standard tenders and according to a pre-specified calendar. The main refinancing operations play a pivotal role in fulfilling the aims of the Eurosystem's open market operations and provide the bulk of refinancing to the financial sector.

Counterparties can use the **marginal lending facility** to obtain overnight liquidity from NCBs against eligible assets. The interest rate on the marginal lending facility normally provides a ceiling for the overnight market interest rate.

Table 2.3.1.: Harmonised long-term interest rates for convergence assessment purposes

The long-term interest rate statistics refer to the monthly average interest rates for long-term government bonds issued by the central government, quoted as percentages per annum.

The fourth Maastricht criterion is based on the level of long-term interest rates. Article 4 of the Protocol on the convergence criteria, as referred to in Article 121 of the Treaty, states that compliance with the fourth convergence criterion "shall mean that, observed over a period of one year before the examination, a Member State has had an average nominal long-term interest rate that does not exceed by more than 2 percentage points that of, at most, the three best performing Member States in terms of price stability. Interest rates shall be measured on the basis of long-term government bonds or comparable securities, taking into account differences in national definitions."

The European Central Bank and the European Commission have, together with the national central banks, identified the representative debt securities that can be used to measure long-term nominal interest rates and, if necessary, alternative long-term interest rate indicators where suitable government bonds are not available

Data until December 2006 refer to the yield to maturity on a reference long-term general government bond, issued in Slovenian tolar and with a nominal interest rate. Since 1.1.2007 the data show the yield to maturity on a basket of long-term general government bonds, issued in euro and with a nominal interest rate.

Until 2003 a yield to maturity on a primary market is presented, and afterwards a yield to maturity on a secondary market.

2.4: Monetary Financial Institutions Interest Rates

Data from January 2003–April 2005

Estimates on MIR statistics refer to interest rates on new business applied by the eight biggest resident banks (selected by balance-sheet-total criterion) to loans denominated in Slovenian tolar vis-à-vis domestic households and non-financial corporations.

Interest rates are calculated as a weighted average of all interest rates on new business in the instrument category.

Loans to non-financial corporations (breakdown by amount category): loans in SIT are converted into EUR by the monthly average exchange rate and then classified according to amount up to and including EUR 1 million, or over EUR 1 million.

"Loans to households for other purposes" include only loans to sole proprietors for current and capital assets.

Data on APRC in the period from January to August 2003 refer to six respondents, and from August 2003 to December 2003, to seven out of eight total respondents.

Data from May 2005–December 2006 covers business conducted in SIT by the total MFI population in Slovenia.

MFI interest rate statistics cover those interest rates that resident monetary financial institutions (MFIs, i.e. "credit institutions") apply to euro-denominated deposits and loans by households and non-financial corporations which are residents of the euro area.

The legal requirements for MFI interest rate statistics are laid down in Regulation ECB/2001/18, which defines the statistical standards according to which monetary financial institutions must report their interest rate statistics. This regulation is complemented by the Manual on MFI Interest Rate Statistics, which further clarifies and illustrates the statistical requirements. The MFI interest rate statistics refer to the interest rates individually agreed between a credit institution or other institution and its customer. They are converted to an annual basis, taking into account the frequency of interest payments, and are quoted in percentages per annum. At the euro area level 45 interest rate indicators with the corresponding volumes are collected, of which 31 refer to new business and 14 to outstanding amounts.

Outstanding amounts are defined as the stock of all deposits placed by customers, i.e. households and non-financial corporations, with credit institutions or other MFIs, and the stock of all loans granted by credit institutions to customers. An interest rate on outstanding amounts reflects the weighted average interest rate applied to the stock of deposits or loans in the relevant instrument category in the time reference period. Interest rates on outstanding deposits cover all deposits placed and not yet withdrawn by customers in all periods up to and including the reporting date. Interest rates on outstanding loans cover all loans used and not yet repaid by customers in all periods up to and including the reporting date, although excluding bad loans and loans for debt restructuring at rates below market conditions. MFI interest rates on outstanding amounts are hence statistics on the interest rates actually applied to all "open" deposits and loans.

New business is defined as any new agreement between the household or non-financial corporation and the credit or other institution. New agreements comprise all financial contracts, the terms and conditions of which specify for the first time the interest rate on the deposit or loan, and all new negotiations of existing deposits and loans. The prolongation of existing deposit and loan contracts which are carried out automatically, i.e. without any active involvement of the household or non-financial corporation, and which do not involve any renegotiating of the terms and conditions of the contracts, including the interest rate, are not considered new business.

The annual percentage rate of charge (APRC) is an effective lending rate that covers the total cost of credit to the consumer, i.e. the interest payments as well as all other related charges. It covers the total cost of credit to the consumer, as defined in Article 18(2) of the Consumer Credit Act. Charges defined in Article 18 of the Consumer Credit Act are excluded. APRC is compiled only for consumer credit and loans to households for house purchases (sole proprietors excluded).

Weighting method: The interest rates on new business are weighted by the size of the individual agreement.

The new interest rate statistics replace the average bank interest rates published by the Bank of Slovenia. The coverage and definition of the new statistics differ substantially from those previously published. Therefore, a direct comparison of the new and old rates is not possible.

* Households = sole proprietorships + individuals + non-profit institutions serving households

**APRC data includes households without sole proprietorships and without non-profit institutions serving households

Note 1: For this instrument category, new business and outstanding amounts coincide.

Note 2: For this instrument category, households and non-financial corporations are merged and shown under the household sector.

Exchange rates (Tables 2.6.1–2.6.2)

Table 2.6.1: Selected Bank of Slovenia Exchange Rates – Average Rates to 31.12.2006

These tables show the Bank of Slovenia middle rates until 31 December 2006. Annual rates are computed as arithmetical averages of monthly rates. Monthly averages are computed as arithmetical averages of daily rates (Sundays and holidays excluded).

A new currency, the Croatian kuna (= 1,000 former Croatian dinars) was introduced on 30 May 1994.

The Polish zloty was denominated on 1 January 1995 at the exchange rate of 1 new zloty for 10,000 old zlotys.

Table 2.6.2: European Central Bank exchange rates

Reference exchange rates of the European Central Bank are shown, representing middle exchange rates of the Bank of Slovenia. The average yearly and monthly exchange rates are calculated as the arithmetical average of daily exchange rates, excluding days on which the TARGET system was closed. This includes Saturdays, Sundays and the following holidays: New Year's Day (1 January), Good Friday, Easter Monday, Labour Day (1 May), Christmas (25 December) and 26 December.

Conversion rates between the euro and the currencies of EU Member States that have adopted the euro are irrevocably fixed and valid since 1 January 1999 (since 1 January 2001 for the Greek drachma).

The conversion rate for the Slovenian tolar is valid as of 1 January 2007, the conversion rate for the Cyprus pound and Maltese lira as of 1 January 2008 and the conversion rate for the Slovak koruna as of 1 January 2009.

Payment systems (Tables 2.7 to 2.13)

General

Data prior to 2007 are published in tolar; from 2007, data are published in euros.

Due to rounding in Tables 2.11 to 2.15, sums of quarterly data do not always totally comply with relevant yearly data.

Table 2.7: TARGET2 and SEPA internal credit transfer (SEPA IKP) transactions

Note 1: On 1st January 2007 the transaction limit for payments submitted to the Giro Clearing system (multilateral net system for small value payments), raised from EUR 8.354,21 to EUR 50.000.

Note 2: SEPA internal credit transfer system (the SEPA IKP) is operated by the clearing company Bankart d.o.o. SEPA IKP system was established on 4 March 2009. Before SEPA IKP establishment the same transactions were processed in Giro Clearing payment system, operated by Banka Slovenije. Giro Clearing payment system was closed down on 1 August 2009. Data regarding transactions in the Giro Clearing payment system are published until March 2009. Data regarding transactions in both systems are published together (the sum of transactions in the Giro Clearing and SEPA IKP systems) for the period from March to July 2009. Data regarding payments in the SEPA IKP system are published from August 2009 on.

Note 3: Until 29th December 2006 payments data on domestic payments between Slovenian participants are published for domestic Slovenian RTGS system (values in billion Slovenian tolar). As of 1st January 2007 domestic payments of Slovenian TARGET participants represents payments sent from Slovenian credit institutions to another Slovenian payment institution, direct participated in the TARGET system.

As of 19th November 2007 payments in TARGET 2 system are considered.

Note 4: As of 1st January 2007 cross-border payments of Slovenian TARGET participants represents payments sent from Slovenian credit institutions to non-Slovenian credit institutions, direct participated in the TARGET system.

As of 19th November 2007 payments in TARGET 2 system are considered.

Note 5: Gross value is the total value of all payment orders executed in the payment system.

Note 6: Net value is the amount required for the settlement of the gross value of payments in a payment system that uses netting. It represents the sum of the net monetary liabilities of all participants of the payment system to other participants of the payment system, calculated as the positive difference between the payment orders sent to the system and the payment orders received from the system for each participants of the payment system in an individual settlement cycle.

Table 2.8 Payment Cards

Note 1: Credit card: A card indicating that the holder has been granted a line of credit. The credit granted may be settled in full by a specific date each month (delayed debit card, i.e. charge card), or may be settled in part, with the balance taken as extended credit (credit card).

Note 2: Debit card: A card which enables the holder to have purchases directly charged to funds on the cardholder's bank account.

Note 3: Cards issued abroad: Payment cards issued abroad and used for payments in Slovenia, mostly by non-residents.

Note 4: Volume and value of transactions abroad: Use of cards issued in Slovenia for payments abroad.

Number of payment cards in circulation: Number of valid payment cards held by residents and non-residents issued in Slovenia. Data refer to the end of each quarter/year.

Number and value of payments refer to the use of payment cards in each quarter/year.

Domestic card: Payment card issued by banks and enterprises resident in Slovenia without licence agreements with foreign issuers.

Licence card: Payment card issued by banks and enterprises resident in Slovenia under licence agreements with foreign issuers.

Bank card: Payment card issued by banks.

Retailer card: Payment card issued by non-banking institutions, mostly for use at specific retail outlets.

Personal card: Payment card issued to a natural person (family cards included).

Business card: Payment card issued to a legal entity.

Table 2.9 Other Payment Instruments and Innovative Payment Schemes

Note 1: Data refer to the end of each quarter.

Note 2: Prior to 2007 the data refer to payment transactions and money withdrawals at manual POS and EFT POS terminals in Slovenia. From 2007 on, the data on money withdrawals are not included.

Table 2.10 Electronic Banking

Note 1: Only credit transfers debited from payers' accounts are included.

Note 2: Payments by Bank of Slovenia as payment service provider for non-MFI subjects are also included from 2011 on.

Table 2.11 Credit Transfers

A paper-based order is a payment instrument related to a credit or debit transfer, in which the payer submits an order on a paper-based form. In case of credit transfer it means any instruction by an account holder to his payment service provider requesting the transfer of funds from his account to another account (also between accounts of the same account holder). Includes submissions by telefax if they require manual intervention in order to be transformed into electronic payments.

Special payment order is a special form of paper-based payment order, which is issued by a payee (beneficiary) to be paid by the debtor. The special payment order is presented by the payer at the bank, which then debits his transaction account and transfers the amount to the account of the payee, potentially via several other credit institutions as intermediaries and/or one or more payment and settlement systems. A contemporary form can assure automated processing with ICR technology (Intelligent Character Recognition) or classic manual processing.

A non-paper-based credit transfer is any credit transfer which the payer submits without the use of paper forms i.e. electronically. Includes submissions by telefax or other means if they are transformed into electronic payments without manual intervention.

A standing order is a non-paper-based credit transfer and means an instruction from a payer to his bank to make a regular payment of a fixed amount to a named creditor. The payer authorises his bank (the bank at which he maintains a transaction account) to pay a specified amount regularly to another account. The payment must be repeated at least five times. The execution of payments occurs under exact conditions on a particular day of the month.

Direct credit is special form of payment instrument related to a credit transfer, initiated by the payer, which enables a cashless fund transfer from payer to payee. Direct credit is used for the execution of small value payments, e.g., salaries, pensions, dividends and similar payments, to a large number of creditors.

Table 2.12 Debit Transfers

Direct debit is an authorised debit on the payer's bank account initiated by the payee. It is a payment instrument consisting of automatic debiting of the debtor's account for goods and services delivered by the creditor. The debtor (payer) authorises his bank to transfer funds from his bank account to the creditor's account and the creditor to submit a payment order to the creditor's bank to be paid. A typical example is an electricity bill payment.

Note 1: **A special money order was used until the end of 2009.** Special money order was a standardised paper-based debit instrument used to remit money to the named payee. A special money order was issued by a bank, allowing the individual named on the order form to receive a specified amount of cash on demand.

Table 2.13: Network of Commercial Banks

Note 1: Statistical regions, source: Statistical Office of the Republic of Slovenia, 31 March 2000.

Map of Slovenia by Geodetic Institute of Slovenia

Note 2: Data referring to the Post Bank of Slovenia do not include units of the Post of Slovenia that operate for the Post Bank of Slovenia on a contractual basis.

3. BALANCE OF PAYMENTS AND EXTERNAL POSITION**Balance of Payments****General notes**

In most respects the Slovenian Balance of Payments (BOP) conforms to the methodology of the IMF's Balance of Payments Manual, fifth edition (1993).

Characteristics of the Data

Minus sign (-) indicates imports or surplus of imports over exports in the current account, increase in assets or decrease in liabilities in the capital and financial accounts, and growth of reserve assets.

Data on transactions are converted from the original currencies to EUR using the daily Bank of Slovenia or ECB's exchange rates, or average exchange rates for the period if the exact date of transaction is not known.

Revision policy

Revision of balance of payments, the international investment position and gross external debt data occur as follows:

Revisions in **monthly data** are published with the release of:

- the following month's data;
- the corresponding quarterly data;
- the corresponding revised quarterly data;
- the international investment position and external debt data for the corresponding year; and
- the revised international investment position and external debt data for the corresponding year.

Revisions in **quarterly data** are published with the release of:

- the following month's data;
- the data on the following quarter;
- the international investment position and external debt data for the corresponding year; and
- the revised international investment position and external debt data for the corresponding year.

Revisions for the **annual** balance of payments, international investment position and external debt data are published with the release of the data for the following years.

Annual data are revised for the year t-1 and t-2. In the case of major methodological changes or discrepancies among the data sources, data for the year t-3 will be revised as well.

Data sources

- **The external trade statistics (Statistical Office of the Republic of Slovenia)** is the main source of data on trade in goods. Since 1 May 2004, the source of data on trade in goods among Slovenia and EU Member States is the Intrastat reporting. The source of data on trade in goods with other countries is the single administrative document (Extrastat reporting).
- **Reports on account balances and transactions between residents and non-residents (C, PPT, PPV):**
 - report on account balances at domestic banks – PPV (until 31 December 2004),
 - report on account balances abroad – C (until 31 December 2006),
 - report on transactions through accounts at domestic banks – PPT (until 31 December 2008),
 - report on transactions through accounts abroad – C (until 31 December 2008).

All banks which conducted international payment transactions and all residents with open accounts abroad were obliged to report. The resident issuer/beneficiary of the payment was obliged to forward data on the type of transaction. Since 2009 only banks which conduct international payment transactions report transactions with nonresidents that exceed threshold EUR 50.000. Data are used for quality control purposes only.

- **Reports on trade in services, part of trade in goods and on current/capital transfers with nonresidents (BST)** are the sources of data on services (excl. travel), data on coverage adjustments of goods item and data on current and capital transfers (excl. transfers with EU budget) from 2008 onwards.
- **Reports on transactions with securities (VRP) and data from the Securities Clearing Corporation (KDD)** are the sources of portfolio investments (debt and equity securities) and financial derivatives since 2004.
- **Reports on purchased/sold foreign debt securities without domestic brokers (DVP)** are the sources of portfolio investments in foreign debt securities, carried out without domestic brokers, from 2007 onwards.
- **Data regarding drawn/un-drawn credit transactions from foreign credit registration forms (KR)** are the source of data on loans of all sectors until 2004; in 2005 and 2006 they are only the source for the non-banking sector. A registration was obligatory for all financial credits and long-term commercial credits; since 1997 from the same source are also obtained the data on the purpose of direct payments of foreign lenders, used to settle the obligations of domestic borrowers to other non-residents.
- **Reports on monetary financial institutions (PORFI)** are the source for data on loans, cash and deposits of the banking sector since 2005.
- **Reports on credits received and granted and deposits with non-residents (KRD)** are the source for data regarding loans and deposit of all sectors, except banks, since 2007.
- **Reports on short-term receivables and liabilities from operations with non-residents (SKV)** are the source for short-term trade credits and advances since 2002.
- **Reports on investments (SN)** are until 2007 the source for reinvested earnings of direct investments. From 2008 onwards these reports are source also for all other direct investment transactions in equity and related income as well as for portfolio equity transactions without involvement of domestic dealers.
- **Report on Modern Payment Instruments (SPI)** for data on acquisition of fuel by nonresident transport operators at Slovene petrol stations settled via payment cards of foreign issuers from 2008 onwards.
- **Accounting data of the Bank of Slovenia**
- **Accounting data of banks (KNB)**
- **Budget data on the transactions of government sector between the Republic of Slovenia and EU** (from 2004 onwards)

Quarterly data on financial account's statistics are source for financial derivatives for all sectors except the central bank (since 2007).

- **Estimates and other sources**
 - estimate of purchases of foreign currency and cheques from foreigners in exchange offices (part of the travel category) - until 2004,
 - estimate of expenditures on travel abroad including purchases of goods abroad - until 2004
 - estimate of Italian pensions (IMAD) until the end of 1998,
 - estimate of transactions with foreign currencies and the deposits of Slovene households (until 2006),
 - estimate of labour income (SORS),
 - data on pensions paid to non-residents (ZPIZ),
 - survey on the write-downs of debt from trade in goods and services abroad,
 - estimates for exports and imports of travel - from 2005 onwards (detailed explanation under item Travel),
 - estimate of cash transactions on tourism and labour income (from 2007 onwards),
 - quarterly data on consumption of foreign embassies in Slovenia (SORS, from 2008 onwards),
 - migrants' transfers - outflows (bilateral data between countries, from 2008 onwards),
 - households' transfers (SORS, from 2008 onwards),
 - assets acquired directly by tenders and programmes of EU (SORS, from 2008 onwards),
 - data on nonresidents' investments in real-estate in Slovenia (GURS, from 2008 onwards),
 - data on purchases/sales of real-estate in Croatia (Croatian National Bank, from 2008 onwards),
 - data on direct investment of Slovene households in the form of real estate abroad (main data source Household Budget Survey, SORS)
 - data on purchases/sales of emission allowances between residents and nonresidents (Slovenian Environment Agency, from 2008 onwards until 2011, From 2012 onwards data is collected by BST monthly report).

Current account

Goods

Data regarding general goods can be obtained from the Statistical Office of the Republic of Slovenia. Prior to Slovenia's accession to the EU data were available from standard customs documents. Since 1 May 2004, data are available from single administrative documents for trade in goods with non-EU countries and from Intrastat reports for trade with EU Member States.

Adjustments of CIF/FOB - data on import by CIF value were adjusted to FOB value with the help of a coefficient which is

equal to the weighted average of coefficients between CIF and FOB values of the goods imported (in an available sample), separated with regard to type of goods, type of transport and partner's country. For 2004, a new CIF/FOB coefficient was calculated (1.0306); prior to that the coefficient was 1.0393. Since 2004 on, the coefficient is calculated every year based on a five year average.

Coverage adjustments - made for goods exported and imported without customs declarations (the ITRS source until 2007, the reports of duty free shops and consignment warehouses until 2005, BST reports as source from 2008 onwards). Since 1 May 2004, coverage adjustments also include estimated data on imports of motor vehicles from EU by natural persons not covered by Intrastat System.

Services

Transport

Transportation services are classified according to mode of transport and furthermore according to what is carried. The source of records on transportation services is the ITRS until 2007 and BST reports from 2008 onwards.

Travel - methodology until 2004

The ITRS sources used in the compilation of the "Incoming travel" category include: a.) health- and education-related services; b.) payments made by non-residents to Slovenian tourist agencies; c.) net withdrawals in tolar from non-resident accounts; d.) money spent in casinos by non-residents; e.) data on sales of goods to non-residents in duty-free shops and consignment warehouses; f.) payments with credit cards; and g.) sales of tolar to non-residents abroad.

The data on sales of tolar to non-residents in Slovenia are estimated based on the number of border crossings by foreign travellers and on the number of nights spent in the country by foreign tourists.

Data for the category "Expenditure on travel" come from the ITRS and estimations.

Travel - methodology since 2005 onwards

Main data sources to estimate the **export** of travel are the following surveys and researches conducted by Statistical Office of the Republic of Slovenia (SORS):

- Survey on foreign tourists in summer season is used to define the structure of foreign tourists according to their primary aim of travel (business travel, health care, education, other) and expenditures of each type of foreign tourists ; three-year's survey -last conducted in 2009)
- Survey on foreign travelers (to define the structure of travelers broken down by same-day travelers and transit travelers and their respective expenditures).
- Arrivals and over-night stays of foreign tourists broken down by countries of their residency (monthly survey).
- Number of border crossings (to define the population of foreigners entering Slovenia).

Based on data sources the following six categories of data are calculated and finally broken down by countries using data on mobile phone operators;

- Business travel,
- Health - related travel,
- Education,
- Other,
- Same- day travelers,
- Transit travelers.

Main data source to estimate the **import** of travel is SORS's survey TU_ČAP (Quarterly survey on travel of domestic citizens). The Survey provides the value of expenditures of domestic population traveling abroad (same - day trips and longer trips) and the amount spent for transportation to and from the foreign destination, which is then subtracted from total expenditures in order to avoid double counting (since it is already included in transport services).

Based on TU_ČAP data source the following five categories of data are calculated and finally broken down by countries using data on mobile phone operators;

- Business travel,
- Health - related travel,
- Education,
- Other,
- Same - day travelers.

Construction services

The source of data is the ITRS until 2007, all construction undertakings are recorded under construction services on net basis (the revenues earned on works performed abroad are recorded net of the corresponding expenditures). From 2008 onwards the sources of data on construction services are BST reports.

Insurance services

Premiums on life and non-life insurance are split into two components: (i) the service charge included in insurance services; and (ii) the premium in a narrow sense, recorded as a current transfer. The calculation of the service charge is based on a fixed percentage of premium payments. The source of data on insurance services is ITRS until 2007, this source was replaced by BST reports for 2008 data onwards. Insurance services include commissions of insurance companies and 45 % of premium payments. Insurance claims and other part of nonlife insurance premiums are included in current transfers, claims and part of life insurance premiums represent assets/liabilities of financial account.

Government services

All transactions settled through the accounts of Slovenian embassies abroad, as well as transactions coded as government

services settled through the accounts of Slovenian banks with foreign correspondents, are included in this item until 2007 with the ITRS as the source of data. From 2008 onwards the source of data is BST report, government services include all services of Slovenian representative bodies abroad. From the same year there are included data on consumption of foreign embassies in Slovenia. Data are provided by SORS (on the basis of taxation data).

Also for all other types of services the ITRS source has been discontinued as of 2008, when the new source (BST report) for data on trade in services (excl. travel) has been introduced.

Income

Labour income – receipts. Since 2002, data from the Labour Force Survey (SORS) and Eurostat data have replaced ITRS and estimates as sources of labour income for the work of Slovene residents abroad.

Labour income - expenditures. ITRS is the source for labour income - expenditures until 2004. Data relating to 2005 onwards are provided by SORS on the basis of Labour Office register for the number of nonresidents, who at the end of each quarter possess valid work permits and who actually worked in Slovenia less than one year and data by The Health Insurance Institute of Slovenia for nonresidents, who at the end of each quarter don't need valid work permits and who actually worked in Slovenia less than one year. Data on daily migrant workers from Austria, Italy, Hungary and Croatia are also included.

Since 2002, labour income (receipts and expenditures) is included according to the gross principle (including taxes and social contributions).

Capital income – Since 2004, VRP reports have replaced ITRS as a source for income from equity securities. Annual reports on capital investments are the source for data regarding reinvested earnings. Data on reinvested earnings in the current year are estimated - (a three year monthly average of actual data on total earnings, less extraordinary incomes [the source being annual reports on investments], is decreased by dividends and other incomes, paid in the current month (the source being monthly reports on investments from 1.1.2008 onwards, previously the source was ITRS). The estimate is replaced by actual data only when these data are available. Data on disproportionately large exceptional payments of profits relative to the recent level of dividends and earnings (superdividends) are excluded from income and included in direct investment as withdrawals of equity (from 2008 onwards). Until 2003, the source of income from debt securities was ITRS; since 2004 the sources are reports on securities transactions (VRP reports) and KDD data. Until 2004, the source on income from other investments was ITRS for the banking sector; the source was later changed to reports on monetary financial institutions (PORFI). Until 2006, the source on income from other investments for the non-banking sector was ITRS; since 2007, the source is KDD reports. Income from loans (including long-term commercial credits) and cash reserves have been managed according to the accrual principle since 2002; since 2007, total income from other investments is managed according to the same principle. Since 2004, the accrual principle is used for income from bonds and notes.

Current transfers

Current transfers of other sectors are subdivided into workers' remittances, insurance and other transfers. Current transfers of the government sector and other transfers of other sectors are from 2002 onwards subdivided into taxes, subsidies, social contributions, social benefits and other transfers. The main data sources are the ITRS and estimates until 2007, from 2008 onwards the sources are BST reports and from 2004 onwards, data on EU transfers of the government sector are obtained directly from the Ministry of Finance (budget data). Migrants' transfers - outflows (data provided by foreign central banks) and transfers of households (SORS survey) are included from 2008 onwards.

Capital and financial account

Capital account

Capital transfers

The ITRS is the source of data until 2007. Migrants' transfers cover not only payments recorded by domestic banks, but also the changes in residency of accounts held with these banks. From 2008 onwards data are obtained from BST reports, but data on capital transfers between the Republic of Slovenia and the EU are from 2004 onwards obtained directly from the Ministry of Finance (budget data). Since 2002, the Bank of Slovenia also estimates the value of write-downs of debt from trade in goods and services abroad. From 2008 onwards, there are also included data on assets acquired directly by tenders and programmes of EU (SORS, Annual survey on investment in tangible assets).

Financial account

Direct investment

Direct investment is until 2007 recorded on the basis of reported payments through domestic banks and data from customs declarations, from 2008 the source is direct monthly report SN. Data on reinvested earnings are based on yearly surveys on balance and transactions with affiliated enterprises (SN) and are included monthly as one-twelfth of the yearly figure. Data regarding reinvested earnings for the current year are estimated. Until 1997, the purchase and sale of all shares and equity were included in this item. Data on disproportionately large exceptional payments of profits relative to the recent level of dividends and earnings (superdividends) are included in direct investment as withdrawals of equity (from 2008 onwards).

From 2007 onwards, data on foreign direct investments of households in the form of real estate are included.

From the beginning of 1997, purchase and sale of shares that assure more than 50 percent of a company's equity (a controlling interest of shares) and shares issued by domestic companies on the primary markets with the purpose of increasing the nominal capital of the company are included in this item, due to capital control measures. With the new Foreign Exchange Act in 1999, the 10% rule is applied to direct investment. Data of Surveying and Mapping Authority of the Republic of Slovenia on nonresidents' investments in real-estate in Slovenia are included from 2008 onwards. From the same year data on Slovenian residents' purchases/sales of real-estate in Croatia are included (data source is Croatian National Bank).

Since 2001, there is a break in the data series in the category "Direct Investments - Other Capital". Since that time, loans and long-term commercial credits between affiliated companies (10% or more of capital share) are included in this category. Until 2000, these types of transactions were included in the category "Other Investments". Since 2002, the category "Direct Investments - Other Capital" also includes short-term commercial credits between affiliated companies. Since 2005 other capital claims / liabilities does not include banking sector's claims/liabilities with direct investment relationship (these data are included in item other investment/loans).

Portfolio investment

Transactions are divided into assets and liabilities, with further breakdown into equity and debt portfolio investment. Until 1997 only data on sales and purchases of debt securities through banks were included in this item. Since February 1997 the equity securities with the exception of direct investment are included in this item too. With the new Foreign Exchange Act in 1999, portfolio investment transactions include all transactions below the 10% rule. Equity portfolio investment to individual sectors is subdivided into mutual funds and other investment. VRP and KDD data are the main sources from 2004 onwards. Since 2007 on this item includes also assets of debt portfolio instruments held by Bank of Slovenia, which are no longer considered as international reserves, but as claims to EMU member states and claims in EUR currency to all other nonresidents. From 2007 onwards data on transactions in assets of foreign debt instruments that occur without involvement of domestic dealers are collected on a report DVP, and from 2008 onwards assets and liabilities in portfolio equity investments deriving from transactions without involvement of domestic dealers are collected on report SN.

Financial derivatives

From 2004 until 2006 these types of transactions are included in VRP and KDD sources. Since 2007 quarterly data on financial account's statistics are source for financial derivatives for all sectors except the central bank. From 2009 onwards financial derivatives of Bank of Slovenia are included in other investment/financial derivatives item or international monetary reserves item (depending on the residency of the counterpart).

Other investments

Short-term trade credits

Until 2002, short-term trade credits were estimated based on the following calculation:

- [(export of goods FOB + coverage adjustments - (export payments + free export of goods + direct investments in goods + drawings of granted long-term trade credits))]
- [(import of goods FOB + coverage adjustments - (import payments + free import of goods + direct investments in goods + drawings of received long-term trade credits))]

Since 2002, short-term commercial credits and advances are included based on SKV reports. Short-term trade credits between affiliated companies are included in direct investments.

Loans and long-term trade credits

From 2001 onwards, inter-company debt transactions between affiliated enterprises (10% or more capital share) are not recorded as loans, but are recorded as direct investment - other capital transactions. Loans (including long-term trade credits) and related income have been calculated according to the accrual principle from 2002 onwards, and according to the cash principle prior to 2002. From 2005 onwards claims/liabilities of banking sector regardless of capital affiliation to nonresidents are included in this item (the direct investment relationships are not distinguished in the data source).

Currency and deposits

Until the adoption of Euro currency (1.1.2007) the foreign currency of residents is estimated based on the following formula: deposited currency and cheques on foreign currency accounts of individuals - withdrawals of cash and cheques from foreign currency accounts of individuals + the estimated net purchase of foreign currency by residents + estimated expenditures for tourist travel abroad + estimated expenditures of tourist travel to the former Yugoslavia + the estimated purchase of goods abroad - estimated labour expenditures abroad - estimated Italian pensions (until the end of 1998) + net withdrawals from non-resident accounts in local currency + the change of deposit balances of residents on accounts at BIS Member State banks (before 2002).

From the adoption of Euro currency (1.1.2007) onwards item foreign currency of households is estimated by using data on net inflows of foreign currency from tourism, data on net income on compensation of employees (decreased by consumption abroad/in the economy) and BIS (Bank for International Settlements) data on deposits held by residents with the banks abroad.

Since 2002, the category "Accounts Abroad of Other Sectors" also includes BIS data regarding deposits of residents on accounts at BIS Member State banks.

With adoption of EUR in 2007 as a national currency Slovenia became a member of EMU which affects the following changes in currency and deposits item;

- the item currency and deposits/ claims includes also estimated counterpart of the transactions in cash in current account of the balance of payments (tourism and labour income),
- claims of the Bank of Slovenia to EMU member states and all claims in EUR currency to all other states are included in the item currency and deposits/ claims.
- net position of the Bank of Slovenia to the Eurosystem (net result of incoming and outgoing payments conducted in EUR

currency through TARGET and STEP2 system) is included in the item currency and deposits/ other liabilities.

International monetary reserves

Reserve assets and related income have been calculated according to the accrual principle from 2002 onwards, and according to the cash principle prior to 2002.

Following Slovenia's entry to the EMU in 2007, claims to other residents of the euro area (denominated in euros and in other currencies) and claims in euros to EMU non-residents are not included in reserve holdings. From 2007 onwards, these transactions are shown in the appropriate categories of the capital and financial account sector of the Bank of Slovenia (investments in securities and other investments).

International monetary reserves item includes also financial derivatives (from 2009 onwards).

Table 3.1: Balance of Payments 1988–1993

The balance of payments is based on the methodology of the International Monetary Fund (Balance of Payments Manual, IMF, 1993). The balance of payments for the period 1998 - 1991 does not include transactions with republics of the former Yugoslavia. The import and export of goods is shown without processing transactions, processing is included in services.

Note 1: For 1988 and 1989, official sector data is included in "Other sectors".

Note 2: For 1988 through 1990, "Statistical errors" include sales of claims from bilateral agreements to the former National Bank of Yugoslavia and its purchases of foreign currency through Slovenian foreign currency exchange offices.

Note 3: Reserve assets of the Bank of Slovenia.

Table 3.2: Balance of Payments

The data for the current year are revised monthly. Data become final according to the revision practice (see revision practice).

In June 2001, Slovenia acquired a 16.39% share in the holdings of the former Yugoslavia with the Bank for International Settlements (BIS), consisting of gold SIT 16.9 mio (EUR 77.8 million), foreign currencies SIT 1.1 mio SIT (EUR 5.3 million) and shares SIT 3.0 mio (EUR 13.8 million). This transaction is not considered to be a flow of the balance of payments, but rather a part of the "Other changes" category, which reconciles the international investment position in consecutive periods.

* Years 1994 in 1995: Data for balance of payments in ECU for years 1994 and 1995 are not obtained in the same manner as data for other years. The data for merchandise trade are converted from US dollar to ECU using average monthly exchange rates. The data for merchandise trade in Euros or ECU since 1996 are computed from values in original currencies using daily exchange rates for Euro or ECU.

Note 1: Exports and imports of goods - f.o.b. parity

Note 2: June 1996: Includes the issue of government bonds in exchange for a part of allocated foreign debt in the amount of SIT 63.7 mio (EUR 374.9 million). Banks' liabilities under foreign loans are decreased for the same amount and transferred to "Liabilities to government".

Note 3: Issues of eurobonds:

- August 1996 (EUR 253.7 million)
- June 1997 (EUR 205.1 million)
- May 1998 (EUR 500.0 million)
- March 1999 (EUR 400.0 million)
- March 2000 (EUR 400.0 million)
- February 2001 (EUR 100.0 million)
- April 2001 (EUR 450.0 million)

Issues of government bonds since 2007:

- March 2007, SLOVEN4 (EUR 1000.0 million)
- February 2008, RS63 (EUR 1000.0 million)
- February 2009, RS64 (EUR 1000.0 million)
- March 2009, RS65 (EUR 1500.0 million)
- September 2009, RS66 (EUR 1500.0 million)
- January 2010, RS67 (EUR 1500.0 million)
- March 2010, RS68 (EUR 1000.0 million)
- January 2011, RS69 (EUR 1000.0 million)
- March 2011, RS70 (EUR 1000.0 million)

Note 4: For 1993–2001, short-term claims include net changes in commercial credits (received and granted). From 2002 onwards, short-term commercial credits are included on the basis of SKV reports on the assets and liabilities side of the balance of payments. Short-term commercial credits between affiliated enterprises are included under the heading "Direct investments", while other commercial credits are included in "Other investments/trade credits".

Note 5: Includes mostly Bank of Slovenia fiduciary accounts. In June 1996 the amount of 21.2 mio SIT (EUR 124.9 million) was transferred to regular Bank of Slovenia reserve accounts.

Note 6: Use of IMF credit (assumed upon membership in January 1993).

Note 7: Reserve assets of the Bank of Slovenia. Following Slovenia's entry to the EMU in 2007, claims to other residents of the euro area (denominated in euros and other currencies) and claims in euros to EMU non-residents are not included in reserve holdings. From 2007 onwards, these transactions are shown in the appropriate categories of the capital and financial account sector of the Bank of Slovenia (investments in securities and other investments). More explanation is available in: "The statistical treatment of the international monetary reserves at the entry of Slovenia to the euro area" (slovenian), in the chapter Methodological information on the internet page: <http://www.bsi.si/en/financial-data.asp?Mapald=64>.

Note 8: The data on reinvested earnings for 2012 are not yet available. Therefore, the balance of payments includes an estimate (from the three year monthly average for the period 2009 to 2011 of actual data on total earnings less extraordinary incomes [the source being annual reports on investments], less dividends and other incomes paid in the current month). In 2013, the estimate will be replaced with actual data on reinvestment of earnings; the estimate for 2013 shall take into consideration the new three year average (2010 to 2012).

Note 9: From 2001 onwards, there is a time series break in the categories "Direct investment" and "Loans". From 2001, inter-company debt transactions between affiliated enterprises (10% or more capital share) are included in the "Direct investment" category; before that they were included under the heading "Loans". Since 2002, the category "Direct investments" also includes short-term trade credits between affiliated enterprises.

Note 10: Transfers from the EU budget since 2004 have been recorded as either current or capital transfers, according to the nature of their use. Data are provided by the Ministry of Finance.

Note 11: In the balance of payment of Slovenia to the EMU the presentation of the category net of errors and omissions does not make sense.

Tables 3.3 and 3.4: Current account and capital and financial account by countries

The tables show the main categories of current and capital and financial account of the balance of payments, by countries, for the last available year. The most important countries and/or groups of countries are shown.

Table 3.5.: Trade in goods by countries

The data source is the Statistical Office of the Republic of Slovenia (external trade statistics). Import is valued at FOB parity; export is valued at CIF parity.

International Investment Position of Slovenia

General notes

The international investment position is the balance sheet of the stock of external financial assets and liabilities. The financial items that constitute the position consist of claims on non-residents, liabilities to non-residents, monetary gold and SDRs.

The methodology of the international investment position (IIP) of Slovenia is based on the fifth edition of the Balance of Payments Manual, IMF, 1993. The manual distinguishes four sectors – monetary authorities, general government, banks and other sectors.

The structure of the statement is similar to the balance of payments (financial account): here as well are holdings and liabilities, first classified by instruments, followed by sectors and finally by maturity. The change to the balance of holdings and liabilities in a specific period is the result of transactions or flows shown in the balance of payments and also exchange rate changes, price changes and other changes.

Revision policy

See note "Revision policy" in the section "Balance of Payments".

Data sources

Data sources for the international investment position of Slovenia are mainly the same as those for the financial account of the balance of payments.

Direct investment

Data on direct investment are collected from:

- concessional surveys on equity investment (SN),
- reports on loans granted to or received from non-residents (KR) - until 2006,
- reports on accounts abroad (C) - until 2006,
- short-term commercial credits with non-residents (SKV), and
- assets and liabilities in loans and deposits to nonresidents (KRD) for non-bank sectors since 2007.

In accordance with the recommendations of the IMF, this item comprises investment where the direct investor owns 10% or

more of ordinary shares or voting power. Equity shares are until 2006 valued at book value according to accounting standards. From 2007 the equity of listed companies is recorded according to market value and equity of unlisted companies is recorded according to book value in line with accounting standards. Reinvested earnings are included. Data of Surveying and Mapping Authority of the Republic of Slovenia on nonresidents' investments in real-estate in Slovenia are included from 2008 onwards. From 2007 data on foreign direct investment of households in the form of real estate are included. Claims on and liabilities to affiliated enterprises are included in the category "Direct investment–other capital". Intercompany claims or liabilities between affiliated banks and affiliated financial intermediaries recorded under direct investment capital are limited to those associated with permanent debt (loan capital representing a permanent interest). Until 2000, all long-term intercompany claims were considered liabilities between affiliated banks, and affiliated financial intermediaries were included in this item as well as permanent debt. From 2005 onwards other capital item of direct investment does not include claims/liabilities of banking sector to affiliated enterprises (those data are included in item other investment/ loans).

Data on claims and liabilities of Slovene enterprises in indirectly-affiliated enterprises from 1996 onwards are included in the category "Direct investment abroad" (in cases where an enterprise abroad having Slovene direct investment holds 10% or more equity in another foreign enterprise). In the category "Direct investment in Slovenia", data on the investment of foreign enterprises in indirectly-affiliated enterprises in Slovenia are included (in the case that a Slovene enterprise with foreign direct investment holds 10% or more equity in another Slovene enterprise). From 2007 all claims and liabilities to foreign direct investors/ direct investment enterprise and fellow companies that belong to the same foreign direct investor / direct investment enterprise are included.

Portfolio investment

Until 2002, data on equity securities and other equity shares were available from enterprises' surveys (form SN), but only data from surveys where the direct investor owns less than 10% of ordinary shares or voting power are included. (In the balance of payments, transactions with equity securities and other shares are collected from the ITRS [see note to tables 3.1–3.4] /Capital and financial account/Portfolio investment.) From 2007 data on equity shares below 10% that are traded without involvement of domestic dealers are collected (report SN).

From 2003 onwards, data from the reports VRP (operations in securities reported by brokerage houses, banks and investment companies) and KDD (Central Securities Clearing Corporation) are included. Also data on investments in mutual funds and investments of households in other equity securities are available since 2003. From 2007 data on assets of foreign debt securities that are traded without involvement of domestic dealers are collected (report DVP).

Data on residents' holdings of debt securities are available from VRP direct reports.

Liabilities of debt securities of the government, banking and other sectors are available from credit registration and Central Securities Clearing Corporation data (KDD). For domestic securities issued abroad, the source is VRP reports.

Financial derivatives

From 2004 until 2006 these data are included in VRP and KDD sources. Since 2007 quarterly data on financial account's statistics are source for financial derivatives for all sectors except the central bank. From 2009 onwards financial derivatives of Bank of Slovenia are included in other investment/financial derivatives item or international monetary reserves item (depending on the residency of the counterpart).

Trade credits and loans

The source for short-term trade credits is a report of enterprises on the stock of external assets and liabilities (form SKV).

Until 2006 sources for long-term trade credits and loans are credit registration forms (forms KR) and from 2007 onwards statistical reports on assets and liabilities in loans and deposits to nonresidents for non-bank sectors (forms KRD) and are the same for the international investment position and the balance of payments. Until 2000, the balance of payments did not distinguish loans between affiliated companies from loans between unaffiliated companies and included all loans in other investment items.

From 2005 onwards monetary statistics (PORFI) is the source for banking sector data (claims and liabilities are included regardless of direct investment affiliation).

Currency and deposits, other assets, other liabilities and reserve assets

For these categories, the sources largely coincide with the sources for the balance of payments:

- the accounting data of commercial banks (KNB) - until 2004,
- the account balances of banks in original currencies (PPV) - until 2004,
- the account balances abroad of companies (C) - until 2006,
- assets and liabilities in loans and deposits to nonresidents (KRD) for non-bank sectors since 2007
- the source for banking sector data (PORFI) - since 2005,
- the accounts of the Bank of Slovenia.

In the International Investment Position, mature, unpaid loans and long-term commercial credits are included in other holdings and liabilities as short-term items. These transactions are not included in the balance of payments.

Until 2002, there is a difference between the International Investment Position and the balance of payments for other liabilities and holdings of other sectors, where contractual joint ventures are shown in the investment position. The source for this item is a JV report.

The International Investment Position includes data of the Bank for International Settlements (BIS) on deposits of local residents at BIS Member State banks. Since 2001, an estimate of the balance of foreign currency held by households is also included. However, any further investments of foreign currencies (primarily investments in real estate abroad and foreign securities, without domestic brokers) are not excluded from this estimate, since data of this type are not available. From 2007 onwards, the level of foreign currency holdings of domestic household sector equals the level that was reached

at the end of the year 2006 (2.948,6 EUR million), when Slovenia joined the European Monetary Union. Net position of the Bank of Slovenia to the Eurosystem (net result of incoming and outgoing payments conducted in EUR currency through TARGET and STEP2 system) is also included in the item liabilities/currency and deposits.

Table 3.6: International Investment Position of Slovenia

IIP data do not include:

- data on direct investment of Slovenian households. From 2007 onwards only estimation of the value of real estate direct investment abroad by Slovenian household sector is included,
- claims on other countries in the territory of the former Socialist Federal Republic of Yugoslavia, subject to negotiations on succession (except the part reported by the Fund of the Republic of Slovenia for Succession from 2001 onwards), expropriated assets in these territories and other assets transferred to the Slovenian government during the process of privatization. In December 2006 claims subject to succession to former Yugoslavia were revalued and 'Sklad RS za sukcesijo' was transformed into 'Javna Agencija Republike Slovenije za nasledstvo'.

Additional data on direct investment are available in a special publication of the Bank of Slovenia: "Neposredne naložbe – Direct Investment", and on the Bank of Slovenia Web site: http://www.bsi.si/iskalniki/ecb_en.asp?Mapald=714.

Table 3.7: International Investment Position by countries

The table includes data for the last available year by countries in which Slovenes invest (in holdings) and includes data from which countries foreigners invest in Slovenia (in liabilities). The most important countries and/or groups of countries are shown.

Gross External Debt

General notes

The methodology is based on External Debt Statistics: Guide for Compilers and Users, IMF, 2003. The guide is available at the following Web address: <http://www.imf.org/external/pubs/ft/eds/Eng/Guide/index.htm>.

Revision policy

See note "Revision policy" in the section "Balance of Payments".

Data sources

In order to maintain consistency, the data sources are the same as those for the International Investment Position. The sources for equities, financial derivatives and monetary gold are not used because these types of instruments are not included in the balance of external debt according to the IMF definition.

Tables 3.8 and 3.9: Net External Debt

The tables present gross external debt, gross external assets in debt instruments, and net debt position. The data are the same as presented in the international investment position (IIP). In the table "Net External Debt", data are sorted by sectors, maturities and instruments; in the table "International Investment Position", data are sorted by instrument, sectors and maturities.

Tables 3.10 and 3.11: Gross External Debt

Gross external debt, at any given data, is the outstanding amount of those current, and not contingent, liabilities that require payment(s) of principal and/or interest by the debtor at some point(s) in the future and are owed to non-residents by residents of an economy. The types of financial instruments included in the presentation of the gross external debt position are as follows: debt securities (money market instruments, bonds and notes), trade credits (short- and long-term), loans (short- and long-term), cash, deposits and other debt liabilities. Maturity of debt liabilities is based on the formal criterion of original maturity. Long-term debt is defined as debt with an original maturity of more than one year or with no maturity stated. Short-term debt, which includes cash, is debt repayable at notice or with an original maturity of one year or less.

International reserves

Table 3.12.: International reserves

Until December 2006, the Bank of Slovenia's foreign exchange reserves included convertible foreign currencies, deposits abroad and first-class securities of foreign issuers.

From 1 January 2007, the Bank of Slovenia's foreign exchange reserves include convertible foreign currencies, deposits in foreign currencies outside the euro area and first-class securities in foreign currencies of issuers outside the euro area. The decline of value presented in the data is due to Slovenia's inclusion in the EMU.

Since 2009 foreign exchange reserves of the Bank of Slovenia include also positions on financial derivatives based on daily pricing of these instruments. The value of financial derivatives may also be negative.

4. PUBLIC FINANCE

General

Data prior to 2007 are published in tolar; from 2007, data are published in euros. Quarterly and yearly data on Gross domestic product are not yet reconciled.

General - methodology ESA 95

Non-financial and financial data are prepared in compliance with the European System of Accounts from the year 1995 (ESA 95). This methodology was adopted by Council Regulation (EC) No. 2223/96 of 25 June on the European System of Accounts in the Community.

ESA 95 methodology is the central economic methodology of each EU member state and therefore ensures comparability of data.

Data on non-financial accounts of general government are prepared by the Statistical Office of the Republic of Slovenia. In accordance with a memorandum of understanding between the Ministry of Finance, the Bank of Slovenia and the Statistical Office of the Republic of Slovenia, the data on financial accounts are compiled by the Bank of Slovenia.

The data on financial accounts are consolidated.

Table 4.1: Non-financial and Financial Accounts (ESA 95) of the General Government sector

EDP debt is gross debt as defined in the Maastricht treaty. It comprises general government liabilities in the form of currency (coins), deposits, debt securities (securities other than shares and other equity) and loans only.

Tables 4.2 and 4.3: Non-financial Account of the General Government sector

Fiscal burden is a sum of the direct taxes, indirect taxes, social contributions and capital taxes.

Intermediate consumption consists of the value of the goods and services consumed as inputs by a process of production. The goods and services may be either transformed or used up by the production process.

Tables 4.4 and 4.5: Financial Account of the General Government sector

Change in EDP debt is a difference between the current and preceding EDP debt figure.

Deficit-debt adjustment (DDA) is a sum of the deficit/surplus of non-financial account and change in EDP debt. DDA can be also calculated as a sum of the difference between financial assets and liabilities (which are not included in EDP debt) and other flows.

Other liabilities consist of data, which are not included in the EDP debt: financial derivatives, shares and other equity, insurance technical reserves and other liabilities.

Other flows are sum of the statistical discrepancy (difference between deficit/surplus of non-financial and financial account) and changes of the debt which are not transactions (foreign exchange holding gains and losses, other valuation effects, other changes in volume of debt).

Borrowing requirement consists of a negative deficit/surplus of financial account plus financial assets minus financial liabilities.

Table 4.6: Revenues and Expenditures of the General Government

Note 1: The data of the current and previous year are revised monthly until the data on the previous year become final.

Note 2: Total revenue excludes receipts from the EU, and likewise, total expenditure excludes payments to the EU budget.

Note 3: Current expenditure also includes social security contributions (besides of the expenditures on goods and services, interest payments, current reserves and current transfers).

Note 4: On 1 October 2011, the Tax Administration of the Republic of Slovenia (DURS) introduced new information system and due to that, large number of recorded data on the tax and social security contribution revenues remained on unallocated fund accounts, while totals for those two categories were unaffected. We are publishing the data where certain categories of taxes and social security contributions were estimated by the Ministry of finance. The funds are expected to be correctly allocated already next month. Source: <http://www.mf.gov.si>

Tables 4.7: Lending, Repayments and Financing of the General Government

General government operations (consolidated state budget, local governments, pension fund and health insurance fund).

Note 1: The data of the current and previous year are revised monthly until the data on the previous year become final.

Table 4.8: Central budget debt

The Republic of Slovenia is defined as a legal person. The data from tables 4.6., 4.7. and 4.8. originate in the Bulletin of Government Finance published by the Ministry of Finance.

The obligation of the Central budget of Republic of Slovenia to Bank of Slovenia is due to settlement of the Special drawing rights of the International monetary fund by Bank of Slovenia as a fiscal agent, in line with the agreement between the Ministry of finance of Republic of Slovenia and Bank of Slovenia.

5. FINANCIAL ACCOUNTS**Financial accounts (Tables 5.1 to 5.6)**

Tables 5.1, 5.2, 5.4 and 5.5 show stocks and transactions in financial assets and liabilities held by individual institutional sectors, by individual financial instruments. The basis for the financial accounts methodology is ESA95.

Tables 5.3 and 5.6 present net items by individual sectors.

Net financial assets present difference between financial assets and liabilities (stocks).

Net financial transactions present difference between transactions in financial assets and transactions in liabilities.

The general principle for stocks and transactions is valuation at the current market price. As a rule accrued interest is included in the instrument to which it relates (deposits, loans, securities).

The transactions represent the difference between increases (acquisitions) and decreases (disposals) or the net turnover in an individual financial instrument. Changes in market prices and exchange rates, and other changes (reallocations of financial instruments/sectors, changes in methodology, write-downs of claims/debts, etc.) are excluded from the transactions.

Sectors, according to SKIS, are used.

Financial instruments in financial accounts

Individual financial instruments are the same among assets and liabilities, except Monetary gold and SDRs which only appear in financial asset tables.

Monetary gold and SDRs represent financial assets of the central bank. No other institutional unit or sector shall show a liability from the above mentioned instruments.

Currency and deposits consists of three sub-categories of financial instruments:

- currency represents bank notes and coins normally used for payments and includes bank notes and coins in circulation and represents the liability of the unit which issued them (as a rule, the central bank). The category "Household Currency and NIPSH (non-profit institutions serving households)" includes the foreign currency of residents which is estimated based on net purchases.
- transferable deposits consist of sight deposits in domestic or foreign currency. Transferable deposits can be converted into currency or transferred by cheque, payment order, debit entry or the like, without significant restrictions or additional costs.
- other deposits consist of deposits that cannot be used to make payments at any time and are not convertible into currency or transferable deposits without significant restrictions or additional costs.

Securities, excluding shares, are comprised of the following:

- short-term debt securities (with an original maturity of up to one year bills and other short-term debt securities);
- long-term debt securities (with an original maturity of more than one year: bonds);
- financial derivatives (options, swaps, standardised futures, interest rate futures and warrants).

Loans consist of all types of loans created when creditors lend funds to debtors, either directly or through brokers, that are either evidenced by non-negotiable documents or not evidenced by documents. The initiative concerning a loan normally lies with the borrower. Loans also include loans for financing trade credits, financial leasing, repurchase agreements, and repayable margin payments related to financial instruments when these agreements and payments are liabilities of corporations that are not monetary financial institutions. Loans do not include trade credits or advances.

Loans are broken down into short-term loans (with an original maturity of up to one year) and long-term loans (with an original maturity of more than one year).

Shares and other equities represent:

- Shares which are quoted (on a domestic or foreign market);
- Unquoted shares;
- Other equities;
- Shares/units of investment funds.

Shares/units of investment funds include shares of investment companies, investment coupons (referring to one or more units of mutual funds) and units of pension funds.

Insurance technical reserves comprise the insurance technical reserves of insurance corporations and pension funds against policyholders and beneficiaries, and are divided into three sub-categories of financial instruments.

Net equity of households in life insurance reserves including:

- net life insurance provisions;
- net provisions for life insurance policies where the investment risk is borne by the policyholders;
- net health insurance provisions.

Net equity of households in pension fund reserves consists of provisions deriving from pensions.

Prepayments of insurance premiums and reserves for outstanding claims represent net prepayments of insurance policies, net reserves for outstanding claims and other net insurance technical reserves.

Other assets and liabilities are broken down as follows:

- Commercial credits and advances;
- Other (other assets and liabilities, excluding commercial credits and advances).

Commercial credits and advances consist of financial claims or liabilities arising from the direct extension of credit by suppliers or buyers for goods and services transactions, and advance payments for work that is in progress or to be undertaken and associated with such transactions.

Other (other assets and liabilities excluding commercial credits and advances) consists of all other claims and liabilities arising from timing differences between transactions and payments made in respect of taxes, social contributions, wages, rents, dividends, interest and transactions in financial assets on the secondary market. As a rule, accrued interest is included in the instrument to which it relates. However, should it be impossible to include the interest in the relevant instrument, it is disclosed in the category "Other".

Financial accounts data may differ from other statistical data because of:

- valuation method (current market value),
- data sources,
- time of data recording,
- time of data revision,
- methodological differences in financial instrument classification and
- other methodological differences.

Data for the period before the 1st of January 2007 are converted into EUR based on exchange rate 1 EUR = 239,64 SIT.

6. NON-FINANCIAL ACCOUNTS AND GENERAL ECONOMIC STATISTICS

General notes

The Standard Classification of Activities is defined by the Decree on the Introduction and Use of the Standard Classification of Activities (Official Gazette of the Republic of Slovenia, No. 69/2007, 17/2008) and is in line with the classification of activities NACE Rev.2 (Nomenclature statistique des activités économiques dans la Communauté européenne) as a compulsory statistical standard of the European Union, which is directly connected to the international classification of the activities of United Nations ISIC Rev. 4 (International Standard Industrial Classification).

The basic activities of an economy are:

- A Agriculture, forestry and fishing
- B Mining and quarrying
- C Manufacturing
- D Electricity, gas steam and air conditioning supply
- E Water supply, sewerage, waste management and remediation activities
- F Construction
- G Wholesale and retail trade; repair of motor vehicles and motorcycles
- H Transportation and storage
- I Accommodation and food service
- J Information and communication
- K Financial and insurance activities
- L Real estate activities
- M Professional, scientific and technical activities
- N Administrative and support service activities
- O Public administration and defence, compulsory social security
- P Education
- Q Human health and social work activities
- R Arts, entertainment and recreation
- S Other service activities
- T Activities of private households as employers, undifferentiated goods- and services- production activities of households for own use
- U Activities of extraterritorial organizations and bodies

Methodological notes and a detailed classification for the real sector are published on the Statistical Office's Web site: http://www.stat.si/skd_nace_2008.asp (in Slovene).

General

Data prior to 2007 are published in tolar; from 2007, data are published in euros.

Non-financial accounts and general economic statistics

Tables 6.1 and 6.2: Expenditure of Gross Domestic Product

Real yearly growth rates are calculated from the GDP data in constant prices, reference year 2005.

Tables 6.3 and 6.4: Gross Domestic Product by Activity

Real yearly growth rates are calculated from the GDP data in constant prices, reference year 2005.

Tables 6.5 and 6.6: Industrial Production Index

For the period from January 1992 to January 2004, industrial production indices are calculated from quantitative data on the production of industrial products.

From February 2004 onwards, the basis for calculating the production indices are data on the value of production.

Tables 6.7 and 6.8: Turnover and New Orders in Industry

Data for the year 2010 are provisional.

For the period from January 1998 to January 2003, indices on turnover are estimated on the basis of the monthly data on the quantity of sold industrial products and the average annual prices of industrial products. Data from February 2003 onwards are gathered with the regular monthly survey on turnover, new orders and value of stocks in industry.

Real yearly growth rates are calculated from the real index on turnover and new orders in industry. The deflator is the industrial producer prices index.

Tables 6.9 and 6.10: Business Tendency and Consumer Surveys

The sentiment indicator is the weighted average of the confidence indicator in manufacturing and retail trade, plus the consumer confidence indicator. Sentiment indicators of certain activities or consumers are calculated from answers shown in the table.

The results are shown as a balance by individual questions. The balance is the difference between positive and negative answers, expressed as percentages. The balance shows the movement of the observed economic indicator (present situation or future expectations), and not the real size of economic indicators.

Table 6.11: Employment by Labour Force Survey (ILO)

The Slovene Labour Force Survey was carried out in compliance with International Labour Organisation (ILO) guidelines for labour force statistics and with Eurostat requirements. This enables the comparability of our data to the data of other countries.

Data in column 5 – self-employed persons include family-member assistants as well.

Note 1: From 2008 onwards the revised classification of activities SKD 2008 is used, which is internationally comparable with the NACE Rev. 2 classification of activities.

Table 6.12: Unemployment by Labour Force Survey (ILO)

The Slovene Labour Force Survey was carried out in compliance with International Labour Organisation (ILO) guidelines for labour force statistics and with Eurostat requirements. This enables the comparability of our data to the data of other countries.

Table 6.13: Average Wages and Salaries

Real wages and salaries are deflated by the consumer price index (CPI).

From January 2005 onwards a new methodology for the calculations of average monthly wages and salaries has been used. The statistical survey also includes legal entities with one or two persons in paid employment in the private sector. Individual private entrepreneurs and persons employed by them, own account workers and farmers are not covered.

Published data are the results of new research: the Monthly Report on Earnings at Legal Entities. Data are collected by the Agency of the Republic of Slovenia for Public Legal Records and Related Services (with the common questionnaire (Form 1-ZAP/M). Statistical work was done by SORS. SORS also calculated the average monthly wages and salaries data for 2004 according to the new methodology.

Table 6.14 Nominal effective exchange rate and Real harmonised competitiveness indicators

Nominal effective exchange rate, Euro area-17 countries vis-a-vis the EER-40 group of trading partners (AU, CA, DK, HK, JP, NO, SG, KR, SE, CH, GB, US, BG, CZ, LV, LT, HU, PL, RO, CN, DZ, AR, BR, CL, HR, IS, IN, ID, IL, MY, MX, MA, NZ, PH, RU, ZA, TW, TH, TR, VE); Currency denominator: Euro.

Real harmonised competitiveness indicators consumer prices, industrial producer prices and unit labour costs in total economy deflated; ECB EER-20 group of currencies and Euro area 17 country currencies (FR, BE, LU, NL, DE, IT, IE, PT, ES, FI, AT, GR, SI, AU, CA, CN, DK, HK, JP, NO, SG, KR, SE, CH, GB, US, CY, CZ, EE, HU, LV, LT, MT, PL, SK, BG, RO); Currency denominator: Euro.

Real harmonised competitiveness indicators consumer prices and unit labour costs in total economy deflated; ECB EER-20 group of currencies and Euro area 17 country currencies (FR, BE, LU, NL, DE, IT, IE, PT, ES, FI, AT, GR, SI, AU, CA, CN, DK, HK, JP, NO, SG, KR, SE, CH, GB, US, CY, CZ, EE, HU, LV, LT, MT, PL, SK, BG, RO); Currency denominator: until 31.12.2006 Slovenian tolar, from 01.01.2007 Euro.

The growth of the index value represents decrease of competitiveness.

Note 1: Data for harmonised competitiveness indicators unit labour costs in total economy deflated are quarterly.

Explanations to harmonised competitiveness indicators calculations are available in special methodological paper "Calculations of harmonised competitiveness indicators", on the Web site of Bank of Slovenia:
<http://www.bsi.si/publikacije-in-raziskave.asp?Mapald=1039>.

Tables 6.15 and 6.16: Consumer Price Index

The Harmonized Index of Consumer Prices (HICP) is a comparable index of consumer prices produced by each Member State and used for international comparison of consumer price inflation. In Slovenia it is available from the year 2001 onwards.

Tables 6.17 and 6.18: Industrial Producer Price Index

The index of industrial producer prices measures changes in the level of producer prices of industrial products that are sold by producers on the Slovenian market. The tables show the price indices and growth rates by end-use of products, as well as by main divisions of activities, v2 (2008).

Review of the links between the data on Slovenia in the Bulletin of the Bank of Slovenia and the Euro area data in the ECB's Bulletin

The table below shows the correspondence between the statistical tables on Slovenia in the Bulletin of the Bank of Slovenia and on the Euro area in the ECB's Bulletin, i.e. where are the data on Slovenia included into the Euro area aggregates. The ECB's Bulletin is available on the internet address: <http://www.ecb.int/pub/mb/html/index.en.html>.

Tables in Monthly Bulletin of the Bank of Slovenia	Tables in Monthly Bulletin of the ECB
1.1. Monetary aggregates	2.3 Monetary statistics (Monetary aggregates and counterparts)
